

tromped and sloshed through the mess, feeling sorry for the repair work that would have to be done. There still is probably aerifying and overseeding going on at the Augusta National Golf Club.

The rain not only brought on the mud, it also knocked many blossoms from the flowering plants that are everywhere on the golf course. The colorful scene was more subdued than expected. But the temperature was perfect for watching golf and for walking around the golf course. The sky cleared by noon and the contrast between the bright blue sky and the green grass could not have been more dramatic.

The course, designed by Bobby Jones and Allister MacKenzie, is on the site of a former nursery. They created some of the most beautiful golf holes in the world; Randy was overwhelmed with the beauty of the 13th green site.

The greens seemed slower than in previous tournaments, or at least a lot slower than expected. A golf course employee was asked what the green speed was and he replied, "tournament speed." He gave no number.

With as much rainfall as they received, a mowing must have been missed. Someone caught a scene with a large group dew whipping clippings on fairways. The cut was

uneven and off in height, an indication of wet conditions and lots of grass. Interesting, Dan and Randy noticed a single unit significantly off in height, but only in one direction. It had been corrected for the return pass.

This was the first year Augusta offered an actual "rough." It didn't amount to much - something less than 1.5" I believe I read - and when measured against the incredible mud right up to the rope lines, it could not possibly have affected scoring or decision-making. By the way, it was so bad that one ball pushed into the mud was actually judged to be in casual water!

One notable change from a previous trip to Augusta was the decreased emphasis on visual mowing. For example, a few years ago the approaches were cut with walkers and the stripes burned in. Not this year.

The Thursday rainout required a planned 36 holes on Friday. As it turned out, they played 27, but still the result was some greens work after 18 holes had been played. I watched from the bleachers at the 11th green/12th tee location. A raft of green coats tape measured the new hole location, measured the green speed and carried on some extended discussions. Golf course staff rolled the green with a double roller push implement, likely to roll down the spike marks. Another man cut the hole, taking

WATERTRONICS®

Evolution Series

Super Sport - Turf

The "Evolution Series" pumping system is a proven concept from Watertronics that utilizes a VFD driven jockey/pressure maintenance pump and Electronic Butterfly Valve controlled main pump(s). This control system allows for VFD control of the pump that most benefits from it. Conventional VFD stations share one drive between all main pumps which can cause "across-line" start/stop surges.

Benefits and features of an Evolution Pump Station include:

- VFD driven jockey pump which efficiently performs dual duties of pressure maintenance, while serving as the primary supplier of incidental daytime syringing and hand watering up to 150 GPM.
- Additional pumps are individually pressure regulated with Watertronics' Electronic Butterfly Valve, ensuring surge-free starts and stops.
- Lower horsepower and smaller electrical in-rush of the VFD regulated jockey pump normally will not incur utility "time-of-day" penalties.
- Available with Watervision™ remote monitoring software and Pumplink™ irrigation control software interface.

Vertical Turbine

Horizontal Centrifugal

The "Evolution Series" control system is available on all Watertronics' Vertical Turbine, Horizontal Centrifugal, Super Sport Turf, and BlackMax™ Submerged pumping systems. Call a Watertronics' representative today and find out why our "Evolution Series" may be the best choice for your irrigation pumping system needs.

only one plug. The loud whine of backpack blowers was there as the area was tidied up. Bunkers were hand raked with spring-toothed leaf rakes. It was pretty basic stuff.

Two other maintenance operations were obvious. Overloaded Toro Workman vehicles hauled sand about, here and there, and spread it where the mud was the worst. It didn't do much good. There were quite a number of strategically parked Workmans, loaded with a variety of equipment and tools. There were labeled "emergency" or some such phrase. The size of the course and distance from the shop must have required them.

The extra play on Friday gave us the rare and wonderful chance to see nearly every group play. I watched my favorites - Arnold Palmer, Jack Nicklaus and Gary Player. Behind the 15th tee I stood at the rope and could have shaken hands with Tiger Woods as he waited out the group ahead of him. I saw Ben Crenshaw hit a couple of poor shots and shake them off. Nick Price hit a couple of dogs and nearly exploded.

Arnie Palmer is 73 and was talked into returning to the Masters this year. It is a tough course to walk - long and up-and-down hill - but he slugged it out and did not record the worst score for the day. By the way, some media idiot asked if he'd post his score. "If I play, of course

I post my score," he replied. As he walked down the 2nd fairway, Randy gave him thumbs up. "We've got to get it going pretty soon, boys," Arnie said good-naturedly. No wonder so many people love the guy.

Someone said they saw Jim Reinhart (USGA committee person and Augusta member) helping at one of the greens. He, of course, was a speaker at the spring business meeting where our names were drawn for the Masters trip. I did see him on TV on Sunday congratulate the winner after the playoff hole. Jim is a member of Milwaukee Country Club.

By the time 5:00 P.M. rolled around, WSGA members started to wander back to the buses. Refreshments were waiting for us. They tasted good and went perfectly with the conversation among the happy but tired Wisconsin golf fans.

The trip back was slowed by the tougher federal rules at airports these days, but we still made it back to Milwaukee by about 9:30 P.M.

All in all, this was a memory-making trip. For many among us it may be the last time we go to the Masters, if August GC follows through and calls the tickets back.

Let's pray for a miracle. ♣

Nothing Cuts Greens Like a Jake Mower

Create tournament-quality greens with these ultra-light mowers with free-floating, steerable cutting units and patented swing-out center reels. Our exclusive Turf Groomer® promotes healthy turf and is available on all models. We have the most complete line in the industry!

Greens King™ VI

18 hp Gas or 19 hp Diesel Triplex with a Legendary, 62" Jake® Cut

- Power steering and tilt wheel.
- Optional joystick to lift/lower reels.
- Patented FlashAttach™ quick-change reel system.

G-Plex™ and E-Plex™

18 hp Gas, 18.8 hp Diesel or Exclusive Electric Triplex with a 62" Jake Cut

- Easy, patented swing-out center reel.
- Auto-synchronized lift controls.
- ComfortPlus™ controls and steering arm.
- Whisper-quiet electric, with the highest clip rate.

All covered by the best warranty in the industry.

Greens King™ IV and IV Plus

16 or 18 hp Gas or 19 hp Diesel Triplex Greens Mowers with a Precision, 62" Jake Cut

- Legendary workhorses since 1968.
- Power steering on Greens King IV Plus.

Walk-Behind Greens King™ 500A Series and PGM Mowers

Precise, Contour-Hugging, 18," 22" and 26" Wide Greens Mowers

- Precisely balanced, with true, straight-line tracking.
- Choose 18" to 26" reels to suit your application.
- Durable belt drive.

Optional Features:

Advanced Jacobsen Technology: 7-, 9- and 11-blade reels meet any turf-care need. Choose grooved or solid aluminum or steel rollers for a professional finish. Our patented Turf Groomer controls thatch and improves turf health while increasing greens speed, without lowering height of cut.

Optional spikers, vertical cutters, greens rollers, front/rear roller brushes and patented Turf Groomer.

JACOBSEN
TEXTRON

Precision cut. Legendary performance.

"I'll see you in October, Honey!"

By **Monroe S. Miller**, Golf Course Superintendent, Blackhawk Country Club

It really was April Fools Day when we opened our course. The temperature was a balmy 75 degrees, the course was very dry - dry enough for golf cars - and the putting greens were, well, green after we removed the dead leaf tissue left over from the winter.

We all felt it - "Hooray! Hooray! It's opening day!" Fresh spring air filled our lungs as we experienced the first real physical activity since late last fall, and it really felt good. And we were happy.

Until Saturday and Sunday when snow fell and temperatures plummeted, all accompanied by lightning and thunder. We were, as

Robert Frost once wrote, right back in the middle of winter again. There was more snow on April 7 and 8, and schools in some areas of Wisconsin closed schools for a day or two.

Oh, it is spring and this is Wisconsin and we are used to the season coming in fits and starts. At least we had the one last chance to wrap up any shop work that remained. It also gave Otto, Vavrek, Schaller, Van Liere, Shaw, Dupont and Miller time to do some last minute planning for the WSGA Masters trip! When the five inches of snow that fell on our course finally did melt, boy, was the

tender turf ever green!

That snow was to be the last for southern Wisconsin, but up north there was more due in that third week of April. Salesmen friends who call on me expressed marvel at how tightly there business is tied to the weather, probably nearly as much as ours is. "People don't think much about golf when there is snow on the ground, the wind is blowing and the temperatures are in the 30s," one lamented. "And you guys don't want to see us if there aren't any players on the courses."

The weather amplified that old Wisconsin adage, "Don't blink, you

syngenta

Syngenta never stops working to keep your course green.

Creating the best turf demands the best products. We're constantly refining formulations and developing new ones. To ensure you always have what you need to keep turf healthy and beautiful.

DRIVE
75 DF HERBICIDE

The shortest distance between broadleaf and grassy weed control.

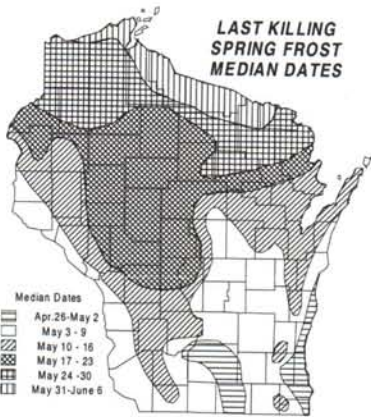

Drive® 75 DF herbicide effectively raises the bar for postemergent weed control. A single, convenient application of **Drive** quickly eliminates a broad spectrum of both broadleaf and grassy weeds—from crabgrass and foxtail to clover and dandelion—in a wide variety of turf species. Then **Drive** keeps weeds under control for 30 to 45 days—in some cases for more than 3 months. **Drive** also offers exceptional seeding and overseeding flexibility—allowing you to seed many varieties of turf immediately before or after application. To learn more about how **Drive**® 75 DF can help you in your drive for turf protection, visit www.turffacts.com. Always read and follow label directions.

BASF

could miss a change in the weather.”

We are able to see very clearly what impact the dry last half and 2002 and the dry winter past have had on lake levels. Our course is on the shore of Lake Mendota and we are acutely aware of water levels since that is the source of our irrigation water. The last I saw the lake so low was in the bicentennial year of 1976 when we experienced a significant drought.

The dry weather has left other inland lakes, especially in southern Wisconsin, in the same plight. To exacerbate conditions, we have had a lack of spring rain and some lakes are as much as two feet below the norm. While boaters and fishers have concerns, so do those of us who need that water for irrigation. We can only pray for some catch up precipitation.

Soil moisture conditions, as recorded by the Wisconsin Ag

Stats Service, are shown here for your records.

Dr. Steve Millett is on the edge of his busy season as head of the WDATCP Gypsy Moth Control Program. Some parts of central Wisconsin are bracing for a big battle against these tree foliage-eating beasts.

Areas with a good population of oak trees, dry and sandy soil, and gypsy moth numbers that have gone up for the past several years will see the problem get worse. WDATCP will spray 331,000 acres on 47 sites in 12 counties this spring. I was relieved to learn our course is in one of the spray sites, although that is also an indication of a bad moon on the rise. That compares with 330,000 acres last year on 99 sites and in 22 counties. Sites will be treated with either *Bacillus thuringiensis kurstaki* (Btk) or pheromone flakes.

PRECIPITATION

Departure from mean, in inches, Oct. 15, 2002 to Feb. 28, 2003:

SOURCE: Midwestern Regional Climate Center, National Weather Service

DROUGHT OUTLOOK

Large-scale forecast through May, 2003:

Three sites in Adams county will be sprayed with *Nucleopolyhedrosis virus* (NPV), a naturally occurring gypsy moth virus. NPV causes the caterpillar to become soft and limp and is often called the "wilt disease." It is harmless to humans, just like the Btk and pheromone flakes.

The moths spread to the Midwest from the northeast U.S. They are native to Europe, Asia and North Africa and were introduced into the U.S. in 1869. They have been a problem since then.

I thought the severe winter might kill some of the egg masses since they over winter above-ground. My suspicion is that the cold temperatures weren't persistent enough.

A Madison legislator has introduced a bill to the legislature that would require a permit for high capacity wells that pump more than 100,000 gallons of ground water per day. He says it would close a loophole that allows hi cap well construction in rural areas with little state oversight.

Similar legislation was defeated last year, but support from state agricultural interests for the proposal is growing, increasing chances of passage. Such a law obviously could have some impact on golf courses.

Participation in the legislative process will help position agricultural enterprises, which includes golf courses, more favorably. The catalyst for the proposal has been the bottled water industries and the fears of ground water supplies being depleted by them.

While there were six guys feeling awfully lucky after the Masters trip drawing at the spring business meeting, another one of our group had some good luck at the GCSAA show last February. Randy Swonger participated in a

survey by Milorganite Marketing, became eligible for a drawing, and was one of three participants to win a Compaq 3655 PDA.

He will have to keep it at work so his wife doesn't appropriate it!

A report by the Southern Growth Policies Board and funded by the National Science Foundation recognizes the UW - Madison as among the top 12 of all U.S. universities that seek to invigorate state economies through technology transfer and start-up companies born from university research. The report describes the UW - Madison as "a story of an extraordinarily successful research university that has also nurtured a long-standing mission of service to its state, while at the same time creating a very entrepreneurial culture and some novel approaches to technology transfer."

It seems that the toughest job ahead for our state's land grant university will be surviving the severe cuts proposed by Gov.

Doyle. He's turning out to be a piece of work - switching positions once in office, taking huge sums of money from the Indians in exchange for gambling for perpetuity, cronyism, and more than I care to think about. But the worst is his proposal to balance the budget by butchering the UW System budget.

Especially in light of the above. Maybe he hasn't read it. Or maybe he is just another short-sighted idiot politician.

There are few things more pleasurable to me than watching a beautiful Monarch butterfly floating lazily by on a summer day. Scientists were fearful of how common that pleasantry might be after hard rains and freezing cold in the central states of Mexico last year killed hundreds of millions of the Monarchs. The kill in January 2002 decimated 75 - 80% of those butterflies that made the 2000 mile journey to the eastern U.S and Canada.

But for once there is good news

to report. This winter observers estimated 200 to 500 million Monarchs were hanging in enormous clumps in a 20 acre area of a forest of fir trees.

It is a mystery to entomologists, but the butterflies have, for whatever reasons, recovered. And we will have them to enjoy this summer after all.

The Agricultural Clean Sweep Program reached a major milestone on March 20th when it collected its two millionth pound of hazardous ag chemicals.

Clean Sweep is a joint effort among Wisconsin counties and the WDATCP to provide free or low cost hazardous waste collection for farmers and businesses. That, of course, has included golf

courses.

The Ag Clean Sweep Program became operational in 1990 as a pilot program in three counties and became statewide in 1992. Tons of unused pesticides have been collected and properly processed since then.

Deep appreciation and congratulations go to those responsible for this critical and valuable state program.

It was discouraging to read that CNH Global plans to close its 100-year old foundry in Racine in 2004. One hundred employees will lose their jobs. It hurts tractor lovers like me to our core.

Of course, for over 90 years this was a J.I. Case foundry, casting parts for that great Wisconsin

company's line of agricultural equipment, including a Case 300 I was in love with as a young kid.

Merger upon merger upon merger have made Jerome Case's company almost unrecognizable anymore. It may be a global economy we operate in nowadays, and maybe plant closings like this make business sense. But I have trouble getting past the heart-break of those directly affected, and the loss of another piece of our proud Wisconsin manufacturing history.

Congratulations to Ryan Norton, son of Grass Roots columnist Pat and his wife Sue. He was accepted into this fall's freshman class at the UW - Madison. It is difficult getting into the university, and even more difficult for out-of-state students. Pat and Sue are alums and I know they are pleased to see their firstborn become a Badger.

As significant as his acceptance, to me anyway, is the fact that Ryan will be a ROTC student. He will have a fuller life because of this decision to experience our country's military service.

Events these past months have proven why we should all be proud of our men and women in uniform. The way they performed their duties in Operation Iraqi Freedom demonstrate the best about our great country. Watching these mainly young people on the news each night for six weeks show courage and restraint and good judgment sent shivers up my spine. And they made me proud, once again, to be a veteran of military service.

So young Ryan Norton will be joining a select and special group of Americans who protect our freedoms and insure our safety. No wonder Pat and Sue are so proud of him. ♡

Cost: \$125.00/person

The Bull at pinehurst farms

The Bull, located at Pinehurst Farms in Sheboygan Falls, Wisconsin, is the only Jack Nicklaus Signature golf course in the state and is already garnering top reviews from veteran golf writers. Its full unveiling in 2003 is sure to strengthen Sheboygan County's designation as the #3 Golf Destination in the US and #7 in the World (*Golf Digest*, Sept. 2000).

From grassy, tree-lined, rolling meadows to holes carved out of mature hardwoods, The Bull will meander corner-to-corner over a 418-acre parcel of this former dairy farm. Lakes, wetlands, and the ever-present Onion River will factor into decision-making on 16 holes. Making certain that The Bull will play true and fair to all playing abilities, Nicklaus has added many elements of risk-reward golf to this fabulous layout. This par 72 course will play to over 7,300 yards from the "Bull" or championship tees.

Lodging for the event is available at the Pinehurst Inn located at 600 N. Main St., in Sheboygan Falls. Several rooms have been blocked for the dates of October 7-9, 2003 at a special rate of \$59.90/single occupancy or \$66.90/double occupancy. These rates will be available to people who book before September 8, 2003. Please call 1-800-845-8106 for reservations and mention the "WTA Golf Outing" for the special rate

Wisconsin Distinguished Graduate Fellowships

1. The WTA's current goal is to establish four Graduate Fellowships in Turfgrass Research.
2. These fellowships will ensure that the University has the resources to attract the nation's most talented students and enable them to pursue their studies in the turf program.
3. For each endowment we must contribute \$250,000, which will be matched by the Wisconsin Alumni Research Foundation (WARF), which in total will provide funds in perpetuity for graduate students to do work in the turfgrass sciences at University of Wisconsin-Madison.
