

GOT DROUGHT DAMAGE?

SUPERCHARGED BENTGRASS WITH YELLOW JACKET

Bentgrass coated with Yellow Jacket germinates and establishes better than uncoated seed. The secret is better utilization of available water. This is due in large part to ZEBA, a key component of Yellow Jacket.

ZEBA is a super absorbent technology that can hold 600 times its own weight in water. Yellow Jacket acts like a sponge around the seed, holding water and nutrients for the seed to draw on as needed for germination.

The Yellow Jacket Advantage

- Improves handling of small seed
- Provides moisture during seed germination
- Improves establishment
- Reduces need for frequent watering during establishment
- Absorbs and releases nutrients to seedling

TURF SAVER
Rhizomatous Tall Fescue

THE SUPERINTENDENTS CHOICE FOR DROUGHT DAMAGE REPAIR

HGT - Excellent KBG for disease, pest and traffic tolerance

RPR - Best wear tolerance among all perennial ryegrass varieties

RTF - Best drought tolerant cool season grass
