ATAENIUS ATTRACTS ATTENTION

Ataenius spretulus life cycle

It doesn't rear its ugly head. You have to recognize the symptoms and go digging for them. This is the season for *Ataenius Spretulus* and the time to check them is in the egg laying stage. In Minnesota that is in early May when the spirea and black locust are in full bloom. For a look at the problem from two sides, see pages 7 and 8.
