TREATING BURNS: PROMPTNESS PAYS

Burns are among the most painful injuries, simply because their effects are immediate. However, prompt action can minimize the injury, alleviate the pain and lessen the chances of long-term scarring.

First-degree burns, those caused by hot water or steam, usually don't require medical treatment. Submerge the injured area in cold water (not ice) until the pain subsides, then blot the area dry with a sterile cloth and apply a dry dressing.

The same treatment is effective for second-degree burns. Second-degree burns usually can be identified by a red or mottled appearance and blisters. For third-degree burns, which look white or charred, don't immerse in water. Simply cover the burned area with a sterile dressing and seek immediate help.

Contrary to some folk remedies, you should not put ointments, butter or any other medicine on a burn.
