

Peter Sandberg of Twin City Testing uses a photoionization detector in the stockpile of contaminated soil.

Not more than 10 minutes later, the tank was out and it still looked like new. This was good. However, Pete Sandberg had come to inform me that he had found substantial amounts of hydrocarbon pollution. This was not good.

Immediately Pete had started to say "Think Petro-Fund." We had been standing next to a 20 cubic-yard stockpile of contaminated soil, finding all types of hydrocarbon contamination. Now we had the backhoe operator take the backhoe down as far as it would go—12 feet. Again, when the soil sam-

ple was brought up, hydrocarbon pollution was showing up in the clay soil.

TCT technicians went about their tasks collecting soil samples as per the MPCA's requirements. I went to notify the club president and green chairman that we had a problem. Next step was to notify the MPCA that the tank was intact, but over the past 20 years a spill had occurred. Hydrocarbons will remain in the soil for 30 to 50 years.

The next concern is to find out the extent of the pollution, and to see if there is any contamination of the ground water. This will be very expensive. Environmental consultants will determine what has to be done. A remedial investigation will be prepared and sent to the club and to the MPCA for its approval to clean up the spillage. When we clean up the contamination, according to the terms and specification set by the MPCA, we will then go to the Department of Commerce and apply to the Petro-Fund for a reimbursement of the monies spent for the clean-up. The Petro-Fund will reimburse the company up to 90% of the costs associated with an UST clean-up.

At the time I write this article, we are still waiting for another bid from another environmental consultant, and I had to convince some very skeptical members that this spill had been happening for the past 20 years, since there was just a sand/gravel road and no concrete pad for filling golf carts, tractors or turf equipment. Anytime a ½ gallon or a gallon of gasoline is spilled, it goes into the soil. Laws of gravity do apply here.

If you happen to think a spill is limited to a super tanker or to a fuel oil barge, it's time to think again. For information you can call Nancy Hunt, MPCA (tank removal 612-296-6300). To report a spill call 1-612-296-8100. More information on the Petroleum Tank Release clean-up fund (PetroFund), call Robin Hanson, Department of Commerce, 612-297-4017.

Turfgrass Foundation Creates Endowment

The Michigan Turfgrass Foundation (MTF) has pledged \$1 million to Michigan State University's turf program, creating an endowment to fund faculty and graduate student research.

The gift supports MSU's first university-wide capital campaign, MSU 2000: Access to Opportunity, a five-year effort launched in May 1988.

"This gift continues a longstanding partnership between the university and the state's turf industry," said MSU President John DiBiaggio. "We are extremely grateful to the Michigan Turfgrass Foundation for this gift and for the support of its members over the past 60 years."

The foundation's gift—its largest ever to MSU—will establish the Michigan Turfgrass Research Endowment Fund. Annual income from the new endowment will enable MSU to attract more graduate students.

Golf Course Accessories

- Ballwashers • Detergent • Mounting Pipes & Bases • Tee Signs • Spike Brushes • Hole Cutters • Flag Poles • Flags • Cups • Rakes • Benches • Tee Markers • Practice Greens Markers • Whipping Poles • Course Signage • And More.

Requested by players. Preferred by course professionals. Specified by designers and used with pride wherever golf is played.
