# Incidence Response Plan—

(Continued from Page 11)

## 9) Release procedures.

Thoroughly describe the facility's pesticide and/or fertilizer release response procedures and practices, including use and/or disposal of spilled materials.

## 10) Anhydrous Ammonia (NH<sub>3</sub>) procedures.

Identify NH<sub>3</sub> equipment and specify location of this equipment at the facility.

## 11) Anhydrous Ammonia (NH<sub>3</sub>) equipment.

Thoroughly describe procedures and practices for handling NH<sub>3</sub> and dealing with releases.

## 12) Employee release response training.

Document employee name and date they completed training.

## 13) Date last revised/updated.

The incidence response plan must be kept current. It should reflect any changes in storage, handling or disposal practices and procedures. This is especially important when there are frequent changes in personnel, product being stored and/or site safeguards. The MDA recommends that, at a minimum, you review and update your plan annually.

As stewards of the environment, we as members of the MGCSA work very hard to make sure that an incident does not happen. Preparedness and organization for the ever-looming potential of an accident is one thing, but our greatest strengths and efforts should be focused on prevention of a spill incident. To continue strong, judicial prudence with our pesticides will help us all in the future.
