

Introducing Toro® Aerators. For Picture-Perfect Ponds.

Our Surface Aerator / Fountain Takes Water Quality Management To New Heights.

If your pond water is so green it makes you see red, look to Toro® for beautiful aeration solutions. Our floating fountains lift water vertically from the bottom to the surface, circulating the water and adding oxygen. The attractive sprays create a rough environment for algae. Naturally, with no chemicals.

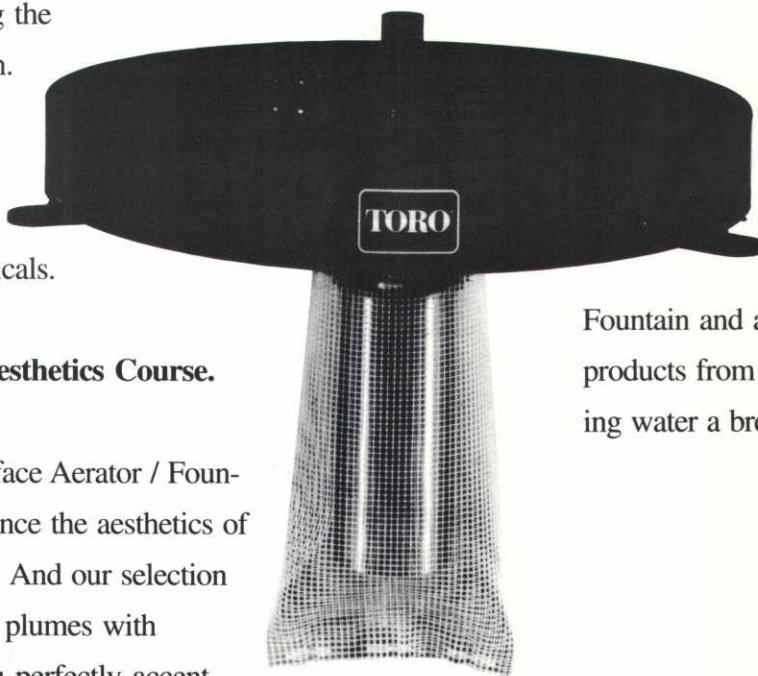

A Quick Aesthetics Course.

With the Toro Surface Aerator / Fountain, you can easily enhance the aesthetics of a course in just minutes. And our selection of decorative sprays and plumes with optional lighting lets you perfectly accent the landscape design. Use one fountain to handle a small pond or artfully float multiple fountains to aerate a mid-sized, shallow pond. Our trained water quality

specialists can recommend the precise equipment for your site.

For Pond Green, Rely On Quality Red.

Before we put our name in red, each Toro Aerator must meet strict quality standards. So you can expect years of trouble-free operation and effective algae control. The Surface Aerator / Fountain and all of the other economical products from our full line make managing water a breeze.
