JOB OPENING:

To: Members/Minnesota Golf Course Superintendents' Association

Elmdale Hills Golf Course is now accepting applications for the position of GOLF COURSE SUPERINTENDENT. Elmdale Hills Golf Course is a newly constructed 9-hole golf course located 10 miles SE of Hastings, Minn. Expected opening date is July 1, 1995.

Future plans include expanding to an 18-27 hole course with driving range by 1998. This is an excellent opportunity to grow and expand with a new course.

Job Description:

- Mowing all greens, tees, fairways, roughs, areas around clubhouse, parking lot, trees, etc.
- Watering all greens and tees as necessary to maintain best possible play.
- Fertilizer and pesticide applications as needed and recordkeeping.
- Maintaining all equipment in good working condition.
- Irrigation repairs and maintenance.
- Working knowledge of automated Rainbird irrigation system.
- Supervising all assistants and part-time laborers.
- Assist in overall golf course operations.

Salary: \$12.00/hour for 1995 Minimum 40 hrs./week through October 1995
1996-beyond negotiable

Requirements: Combination of experience and education required.
Pesticide Applicator License
Valid Minnesota Driver's License

Job available immediately.

Five Good Reasons To Try Futerra® Erosion Control/Revegetation Blanket

For slopes 2:1 or less

1. Reduces Under Blanket Wash

Futerra is more flexible than traditional straw or excelsior alternatives. It molds and bonds to irregular soil surfaces virtually eliminating air pockets for water to gather velocity.

2. Light Weight

Approximately 1/2 the weight per yd² of excelsior mats. Futerra rolls go down quickly with less man-hours per yd².

3. Completely Degrades On-Site

Manufactured from Conweds original pure wood fiber Hydro Mulch® bonded to photodegradable netting, Futerra produces organic nourishment to emerging grass which can be commercially mowed safely in four weeks.

4. Visual Site Appeal

Futerra's new 30 day Green Dye holds it's turf color until grass is established through the blanket. The color and longevity also matches Conwed's Wood Hydraulic Mulches for tying in adjacent flat areas.

5. Weed Seed Free

Futerra halts deposits of noxious weed seed associated with straw materials and retards airborne seed deposits until grass is established.

MGCSA Participates in the 1995 Great Minnesota Golf Show

By Bill Cox

Superintendent at Tianna Country Club

The Great Minnesota Golf Show, held March 17-19 at the Metrodome, featured a wide-range of displays and activities for golfers anticipating the season. Offering a chance to swing a club or stroke a putt, the MGCSA was one of 130 exhibitors at the golf show.

Our display offered information on a variety of MGCSA activities. Included were membership applications, scholarship information and information on the Turf Tourney. Handouts were available on golf courses and the environment, and minimizing exposure to pesticides.

The hot item for golfers visiting the MGCSA booth was the ball mark repair tool, displaying the MGCSA logo. We ran out of them after the second day. . . .again!

An issue of concern was raised by a visitor to the MGCSA booth regarding golf course pesticide use, and the possible relationship to breast cancer.

This was referred to Cora Jane Blanchard of the USGA. She is currently gathering research information regarding this issue. We will get the facts out as soon as possible.

A thank you goes out to MTI for providing a TV/VCR for displaying the video library at the show. Also, to Mike Kelly of Rehbein Farms for providing sod to demonstrate ball mark repair techniques. A special thanks to Steve Hamelau, Alexandria Country Club, who kept a captive audience with his expert method of ball mark repairing. Thank you to all who volunteered their time at the booth as representatives of the MGCSA.

The Great Minnesota Golf Show is a great opportunity to promote our association. It promotes the positive aspects of our courses, and the positive image of the people who take care of them.

THE EX STANDS FOR EXCELLENCE

Par Ex® and IBDU® are registered trademarks of Vigoro Industries, Inc.

WHY MID-SIZE GRADES FOR CLOSELY - MOWED TURF?

BECAUSE fairway-sized particles are too large to apply to closely-mowed turf.

BECAUSE greens-sized products can be difficult to spread.

BECAUSE IBDU is the most reliable, most consistent source of slow-release nitrogen.

Best Bunker Sand From Plaisted Companies Is Preferred Choice Throughout Minnesota

With some suppliers, you can only hope for bunker sand that's consistent from one year to the next. But with Best Sand, you can count on the same top-quality sand, from the same company-owned quarries, meeting the same tough specs, truckload after truckload.

For bunker sand, topdressing, drainage gravel and more, do what so many Minnesota superintendents have already done. Call the Plaisted Companies at 612/441-1100 and order the Best Sand products you need now.

Chicago Bears Offer Challenges For Maintaining Sports Turf

By Ken Mrock

Chicago Bears Grounds Superintendent

As groundskeeper for the Chicago Bears, I have to manage turf that takes the hardest beating in sports turf. Over the past nine years here, I've seen demands on our turf increase dramatically. The players have become bigger and faster and the ball club advocates a year-round training regimen. This is tough because the Midwest has such a short growing season. Essentially, we have to grow grass when it doesn't want to grow.

This past season we had five mini-camps and several twice-a-day practices in addition to our normal four practices per week. On top of this, the Bears share their field with the Lake Forest College football team for five home games.

With this schedule the field doesn't have as much time to grow grass! So what do we do? Punt? Kneel down with the ball? No way!! We attack!! Fortunately, the Chicago Bears are in the forefront of getting better turf for their athletes.

Tackling the Bears' turf every season isn't easy. Along with Assistant Groundskeeper John Berta, I've put together an aggressive mix of seeding and fertilization together with a tight maintenance program to ensure Bears ballplayers have the best possible playing fields.

It all starts in March with seeding.

Starting at the end of March, we pre-germinate seed — a mixture of Blue, Rye and Poa Supina. As soon as the field is workable, we will aerify with a Ryan GA-30, or Toro Greensaire. We try to bring up as many plugs per square foot as possible. We have found this speeds germination and establishes the growth of the plant a little lower in the turf surface, somewhat protecting the plant when the players try to rip them out with their cleats!

After aerification we allow the plugs to completely dry. We then broadcast the pre-germinated seed mix over the entire practice field and add another 7-8 lbs./1,000 sq. ft. of dry seed broadcast, mainly between the numbers. This area is the most worn and the wear area has greatly expanded, out to the number, due to the short passing game or "West Coast Offense." This is where three or four receivers line up between the hash marks and numbers, cutting and spinning their way up the field. With the receivers, of course, come the defensive backs and linebackers defending against them. This puts six to eight players in that small area. The divoting and wear has increased substantially!

Starter Fertilization is key in late March.

Since we have no internal drainage and the practice field was constructed with Turface calined clay, we have continued to apply Turface and our top dressing soil to the practice field. This process is done with a Turfco meter-matic top dresser. We apply this mix across the entire field, then lightly drag all material in with a draft mat. The next step

we take is to fertilize with a starter fertilizer. I prefer Vicksburg Chemical's K-Power™ 13-24-12. This formulation offers potassium nitrate for the established turf, quick release nitrogen that works well in cool soil conditions, and phosphorous for seed germination and root establishment. Next we apply Pythium Control and cover the entire field with a frost blanket. This allows us to bring up the soil temperature to speed up germination of seed and promote growth from existing turf with the K-Power.™

April's Mini-Camp increases maintenance.

Mini-camp hits in late April — three days of twice-a-day practices with about 80 players. I call this our *opening day*, the coaches' first chance to see what the Bears look like! After this inauguration, the field is available to the team until January. With all the traffic on the field, daily maintenance on the field is quite aggressive. Divots must be replaced after every practice. The ones that can't be "found" are replaced with a mixture of seed, topsoil and turface. It's the same process that's done on tee boxes at golf courses.

Fertility steps up in May and June.

In early May the next fertility application is made in conjunction with a spot herbicide treatment for broadleaf. This time I go the K-Power™ 12-0-42. This ratio helps toughen the grass plants for our next two mini-camps. I've experienced the benefits of 12-0-42 and swear by it. I've seen less disease perfication of field, fewer clippings and a much, much more turgid turf stand. Our ballplayers have complimented me on the sturdiness of the turf. Stiffer turf means they play better, similar to how it helps golfers make better shots. The quality of the turf must be the best possible.

The irrigation that is done on the field is by a Kiffco B-140 water reel. Watering is usually done well before dawn, allowing the least amount of plant wetness in the evening hours. Under our normal late spring and early summer conditions, I like to irrigate about twice a week, putting down 3/4" to 1" water per application.

Now that we're into the middle of June, an application of K-Power™ 12-0-42 is done at about 1/2 to 1/3 rate. This enhances what might have been depleted and strengthens the field for the last two mini-camps (rookie camp).

Practice break in July provides window for seeding.

Around mid-July we take a break in practice scheduling and the entire football operation moves to the University of Wisconsin at Platteville for roughly four weeks. This time of the year in Chicago is sometimes a tough time for seed development. But it's our only window. We completely aerify the turf in two directions diagonally, overseed, top-dress and make another application of K-Power™ 12-0-42

(Continued on Page 28)

Finally, A Rotary That Can Rough It.

The Groundsmaster® 455-D is the first rotary mower built for golf course roughs. This 10 ft. mower combines rotary productivity with the consistency and quality of cut you demand.

To make it in the rough you have to be maneuverable. So Toro put the deck out front for visibility and control. The floating wings follow turf undulations and breakaway so you can trim around obstacles. The 455-D has a zero

uncut circle in 2WD mode and only a 10" uncut circle in 4WD.

Power through 5" tall rough with the low maintenance belt drive that delivers more cutting horsepower to the blades. And since you can cut roughs in half the time, you can cut more often for more turf consistency.

Call us to bring out a 455-D, or for even greater productivity, the 16 ft. 580-D. Then you can rough it up for yourself.

Groundsmaster 455-D

Helping you put quality into play.™

Chicago Bears —

(Continued from Page 26)

at 1/2 rate. Fungicides and insecticides are sparingly used in this part of our maintenance program. We also do another spot spraying with herbicide for broadleaf, usually dicamba for knotweed and clover control.

August—the toughest stretch.

As our team prepares for the upcoming season with training camp, August is the toughest stretch of our

turf management program. With the grind of twice-a-day practices with 80 players, we mow daily after every practice, sometimes twice a day, to allow a light rolling. We maintain the turf at 1 3/8" to 1 5/8" with a Jacobson Tri-King 84" reel-type. This is a light-weight mower and allows us to pattern the turf five yards one direction and the next five in the opposite direction. The ballplayers like close-cut turf — they play better on it.

As with golf courses, aesthetics are

important at a football field. The Bears always have five to 10 TV media outlets, and 10 or so print media outlets. We have to attain game conditions at all times! The proper ratio of potassium produces the excellent turf we need. We also topdress and pregerminate seed daily. And after every practice, we replace all divots, lightly roll the field and topdress in all scars or rips in the turf. The integrity of the surface is extremely important.

Cold weather means a shift in fertility program.

SHANE ANDREWS

612/723-0151 or 1-800-642-2736

In September temperatures fall and there is less sunlight. We shift our fertility program to K-Power™ 18-3-18. Some of this application will release quickly; the rest will be stored for the critical cold weather weeks to come. When the nights begin to get down to 35°-45°F, we pull out the frost blankets as needed. This raises the soil temps and kicks in the fertilizer — the turf stand is excellent! We also use our rain/snow tarps as needed, covering 140 x 65 yards in seven sections that zipper together to form one solid tarp. This is important because, other than during a Bears practice or college game, no rain or snow is allowed to accumulate on the practice field.

As the season progresses we pump 4 million BTU's of heat via Kerosene-fired heaters under the tarps to keep the field from freezing. The only time the field is uncovered is for practice during November and December and hopefully January (playoff time!) The increased levels of potassium allow us to literally beat up this field, but it keeps getting up. In mid-November, an application of K-Power™ 12-0-42 at full rate is made which will take us through until the spring when this fun starts all over again!

2 new models. 5 extra inches. 11% more common sense.

Higher capacity hydraulic circuits.

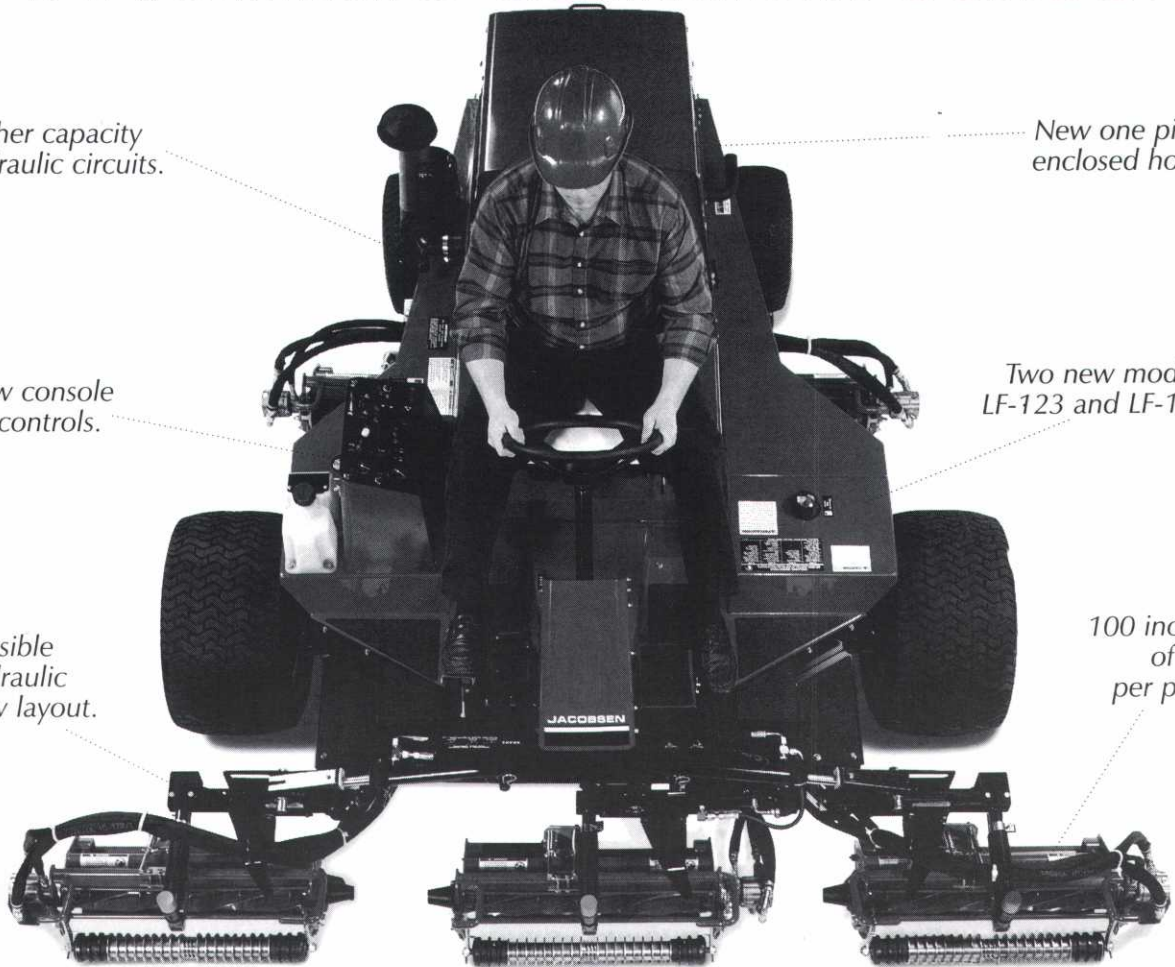

New one piece enclosed hood.

New console for controls.

Two new models: LF-123 and LF-128.

Sensible hydraulic flow layout.

100 inches of cut per pass.

Introducing the 23-horse LF-123 and the 28-horse LF-128. Both offer common sense where you need it most.

More horsepower per inch of cut. Even with fewer horses than the nearest competitor, we deliver up to 11% more horsepower per inch of cut. How? By featuring hydraulic flow layouts that get power to cutting units more sensibly. Instead of one pump being responsible for more cutting, each shares work evenly. The result: superior cutting capacity—even in thicker, heavier grass.

More inches per pass. You get a 5" wider swath than the nearest competitor—a full 100 inches of cut per pass.

More sensible features. New, more ergonomic controls mean more operator convenience. A stylish, new enclosed hood design lowers sound levels and makes accessibility easy. And the optional, one-of-a-kind Turf Groomer® fairway conditioner creates the ultimate fairway playing surface. Both two-wheel and four-wheel-drive models are available. Ask your Jacobsen dealer for a demonstration.
