

One should not attempt to remove the entire ice or snow cover but should leave a protective layer of between one and two inches remaining on the surface. This modest layer will serve to protect against winter desiccation injury and will also function to a certain degree in insulation against direct low temperature stress.

It is preferable to remove the ice and snow during periods when the turf and underlying soil are frozen in order to minimize damage to the surface itself.

Excerpts from the preceding article were taken from an article appearing in *Weeds Trees and Turf*, Nov. 72, written by DR. JAMES B. BEARD, Professor, Department of Crop and Soil Sciences, Michigan State University.

## OUT OF BOUNDS IS REALLY OUT

Canon City, Colo. (AP) – When the golf tournament opens here Saturday all shots over the wall will be unplayable.

The tournament will be held among inmates at the Colorado State Penitentiary medium security unit.

Associate Warden Jack M. Capelli said prisoners have been working for several years to install the nine-hole, par 34 course at the main yards of the medium security section. The longest hole is 325 yards and the shortest is 105.

## MODERN BUG-A-BOO

While the gypsy moth and the fir tree moth eat up millions of acres of our forests and destroy millions of board feet of needed lumber, DDT is banned because it might upset the tummy of some freak fish way out at sea. Protected from harm, Mr. Moth strips the forests and kills billions of trees, displacing birds and wildlife, who are being protected from DDT aftereffects, so they are told, while they shiver and die. So now, the dumbest animal of all, MAN, not only protects murderers and rapists, but gypsy moths, insects & shop lifters. Teach pornography in school, coddle killers, encourage dop addiction, throw bottles and cans along the roadside, drive drunken, but don't touch the gypsy moth or fir tree moth. Please!!
