

## Milky Spore Disease

(continued from page 5)

organism which attacks only white grubs. It is harmless to man and other animals as well as other soil organisms.

Milky spore powder is made by injecting white grubs, Japanese beetle grubs, with the disease. It is an obligate disease organism and cannot be grown on artificial media in a laboratory. After allowing the milky disease organism to develop within bodies of grubs they are killed, refined by drying and grinding before diluting the residue with an extender—usually talc powder. This powder is then used to treat soils in turf areas for grubs. It is applied at the rate of one teaspoonful each four feet

**EGYPT FARMS EXCLUSIVE!** All top dressing ingredients are thoroughly mixed and sterilized by indirect heat in our special process. The sand particles are actually coated with a mixture of top soil & peat humus for a completely homogenous mixture that will not separate during handling and spreading.

Egypt Farms top dressing is formulated especially for the transition zone to specifications recommended by the United States Golf Association, Texas A&M, Penn State, North Carolina, and the University of Maryland.

Many years of research and testing by these leading universities have produced a soil mixture for superior growth; to maintain the best balance of percolation; to resist compaction; for good aeration; and for the retention of usable water & nutrients in the growing medium.

\*Green and tee construction materials and mixes conforming to U.S.G.A. specs are also available.
