It's all over for clover.

It's not a phenoxy herbicide. It's not a three-way. It's better. Confront[®] postemergence herbicide combines the power of triclopyr and clopyralid for premier control of clover, oxalis, spurge, dandelion, plantain and many other stubborn broadleaf weeds — 35 in all.

- Proven consistent control with a single application.
- Fast clover control — as soon as three days.
- Ideal for cool-season turfgrasses where a non-phenoxy herbicide is preferred.
- One gallon covers more than twice the acreage of standard three-way herbicides.

Your fight against clover is over. See for yourself. Ask us today for Confront, the phenoxy alternative against broadleaves.
