## Wayside Plant Food

Wayside Gardens, Mentor, Ohio, are receiving many inquiries for their "Plant Food," for use on golf courses and estates this fall.

This product is a real foundation fertilizer and only one application a year is necessary as it lasts from twelve to sixteen months. Being organic, results are the same on all soils.

Wayside Gardens "Plant Food" is made for the specific purpose of feeding grasses or plants low at the roots, which helps to build a thick sod and consequently a very dense and sturdy growth.

This fertilizer is ideal for late fall top-

dressing, especially on turf which has been thinned out and starved through the hot summer months.

## R. H. WHEELS are stronger

For all Fordson Tractors

Rims do not bend—50% better traction—rounded edges—easier steering. Hundreds used for replacing old, injurious wheels. Sold in singles, pairs or full sets.

## R. H. Tractor Wheel SPUDS

quickest to put on or take off. Increase tractor efficiency and cultivate turf... that's why more than half the U. S. and Canadian clubs use them. Durable and low priced. All sizes for all purposes. Sample spud and circular on request; advise make of tractor and purpose for which intended.

If your Ford or equipment dealer cannot supply, write direct to

## The Battle of 1931

(Concluded from page 5)

weather increased the humidity as well as the fungi. Greens dried out before night. With early morning watering during hot weather, quickly recovered.

5. Balanced feedings during the hot, humid weather, tended to toughen the turf and in a measure make it more nearly brown patch resistant. The most satisfactory complete fertilizer seemed to be the one carrying a heavy percentage of Phosphorus with comparatively light Potash additions. The nitrogen percentage seemed safe if it equalled the total of phosphorus and potash.

6. After improper drainage as well as improper physical condition, a growing tendency to over nitrate feeding was the prime cause for serious trouble. Delicate foliage on turf was grown at a time when a strong, vigorous turf was most needed. Heavy nitrate feedings from Ammonium Sulphate or from one of the organic feedings which during hot, moist weather, could break down by putrefaction and
