

soils by the addition of organic matter. Exhibits displaying the effect of different systems of feeding bent grass under controlled conditions in pot experiments, the response of *Poa annua* to various types of fertilizers, and the ability of different sources of organic matter to retain nitrogen compounds in spite of leaching, aroused considerable discussion.

At 6 p. m. the group adjourned to the Hotel Woodrow Wilson, where dinner was served, followed by a program of talks on turf problems. The relative value of sulphate of ammonia and nitrate of soda, and the proper use of these fertilizers was considered in some detail in the light of critical experiments conducted during the past year and a half at the Experiment station.

Mr. Robert F. Arnott, chairman of the Green Section of the New Jersey Golf association, officiated at the dinner. Short addresses were delivered by Mr. John Anderson, president of the New Jersey Greenkeepers' association; M. E. Farnham, secretary of the Philadelphia Association of Golf Course Superintendents, and John B. Mackie of the Metropolitan Professional Golfers' association.

The famous
LARK'S
little brother

The TEE SPRINKLER

priced to meet today's needs

The Tee sprinkler—far-throwing, smooth-running, sturdy, and dependable—is a fit companion for The LARK. It is ideal for sprinkling tees, practice greens, and other limited areas. Covers from 30 feet up to 100 feet as required. Distributes water in tinydrop sprays **EVENLY** from center to outside circumference on any pressure. Arm spread 20". Roller 12" long.

And best of all, the Tee sprinkler costs only \$6.00. Send for a trial Tee. Test it for 10 days. If you aren't completely satisfied, return the sprinkler and get your money back.

The secret of the Tee sprinkler's satisfactory operation on low pressures lies in the **VIBRATOR** nozzle. (Pat. No. 1763979.) It breaks up the water into misty spray, and makes possible slow rotation of sprinkler head.
