## NO SPECIAL CARE AT TIME OF PLANTING 2. No special care is required at the

1. There are approximately ten million

seeds to the pound, about twice as many

as for other species of bent grass. The

rate of seeding Velvet bent need not be

more than two pounds per 1000 square

feet on properly prepared seed beds. The

cost of seeding Velvet bent is far less than

for planting creeping bent from stolons.

time of planting. Simply use the ordinary precautions as for sowing other small seeded grasses. No unusual attention, such as the careful covering with screened soil and careful watering needed by stolon plantings, need to be given to Velvet bent planted from seed.

3. Velvet bent requires less top-dressing to maintain a true putting surface than any other grass used for putting greens in the United States. Stolon bent greens will require at least twice as much top-dressing as Velvet bent. One of the most costly items in the maintenance budget may be reduced to a negligible figure by planting greens to Velvet bent.

## ELVET BENT (Agrostis canina) is Jersey State Agricultural Experiment Station. In its native habitat, the species occurs on well-drained soils that are inclined to be rather dry, rather than on

any strain of creeping bent, Seaside bent, swampy or soggy soil. Velvet bent will Colonial bent, Astoria bent, Rhode Island tolerate a limited supply of moisture as well or better than related species. bent, or other species of the bent grass

Some Facts About Velvet

Bent

The following information is furnished by the Hyper-Humus

Company in Newton, N. J.

Velvet bent makes a profuse growth of narrow basal leaves, thus producing a dense turf of fine texture.

group.

not a trade name for bent grass, but is the

name of an entirely distinct species. It

produces a much finer textured turf than

When Velvet bent seed contains 5% or more of other bent species or strains, the resulting turf is patchy and uneven in texture because the fine leaved velvet does not blend with the relatively coarse foliage of the other bents.

One of the most conservative seed houses, noted for its high quality products and moderate prices, offers stolons of Metropolitan creeping bent at the price of \$17.50 for enough stolons to plant 1000 square feet. Two pounds of pure Velvet bent seed will plant the same area at considerably lower cost.

#### VELVET BENT PRODUCES ROOT SYSTEM

ELVET BENT turf produces a root system that is fully as extensive as that of any other species of bent grass, according to root studies reported by the New

Velvet bent requires far less top-dressing to maintain a true surface than creeping bent produced from stolons or from seed. With the high cost of preparing good top-dressing, and the large amounts used in the course of a season, the saving on this item from use of Velvet bent is considerable. Velvet bent requires even

less top-dressing than any strain of Colo-

nial bent, or of German mixed bent.

Velvet bent produces the toughest and bardiest turf when fertilizer is used sparingly. In fact, greenkeepers who have propagated this species on their own courses, state that it seems to thrive on neglect of feeding. Excessive soil acidity is undesirable for Velvet bent as well as for other species of bent grass, but the grass will flourish over a wide range of soil conditions.

### WHY VELVET BENT IS INEXPENSIVE

LEVET BENT is a relatively inexpensive putting green grass for the following reasons:

## VELVET BENT IS HARDY

- 4. Velvet bent is hardy, persistent and durable. It will hold its own against the encroachment of weeds, poa annua, and clover as well as any other putting green grass. Moreover, it is better able to do so with limited feeding than other bent grasses. Re-seeding and fertilizer costs may be reduced to a minimum with Velvet bent.
- 5. These great savings in costs are not made at the expense of quality. Pure Velvet bent produces the finest turf ever developed on a golf course or similar grassed area. Impure Velvet bent seed containing 5% or more of other species of bent grass will not produce a uniform, smooth-textured turf, but pure Velvet bent will do so.
- 6. The production of pure Velvet bent seed has been placed on a permanent basis in New Jersey with the assistance of the State Agricultural Experiment Station, and seed of the same high quality as that now available will be placed on the market year after year.
