

*This silhouette cut from
photograph of Milorganized
Fairway at Pine Valley Golf
Club, Pine Valley, N. J.*

. . . for well dressed greens and fairways

**More Golf Clubs use Milorganite than
any other fertilizer**

because . . .

● The steady action and lasting qualities of Milorganite assure vigorous growth and practically eliminate all danger of burning.

● In addition to its very desirable organic nature and high nitrogen content (7½% nitrogen, equivalent to ammonia), 1000 lbs. of Milorganite supplies all of the phosphoric acid used by an acre of turf during a season.

● Milorganite renders seeding unnecessary on established turf . . . causes existing grass plants to spread and form dense, luxuriant sod.
