DoI Turf Restoration Ltd. has developed a new *3-Step Artificial Turf Maintenance Program.*

Step 1: UV treatment – using the latest UV technology we can sanitize your artificial field by destroying the harmful germs and diseases inherent in sports turf surfaces, without the use of harmful chemicals. This UV treatment is clean, effective and most importantly, re-assures your

field users that your surface is safe from potential health risks.

Step 2: Verti-top service – our Verti-top machine refurbishes the turf infill with the use of a rotary brush that removes debris and the top layer of infill, and then sifts the debris out in a unique vibratory shaker which redistributes the clean infill back on the field, leaving your field clear of debris and dangerous objects.

Step 3: Laymor sweeper – our Laymor sweeper helps balance and level the top layer of infill while also re-invigorating turf fibres.
