OPERATOR IN COMMAND

The operator's seat on the Groundsmaster 4500-D and 4700-D is well positioned to give you a full view of your surroundings. A large storage platform for light gear sits behind the driver and a multi-sized beverage holder, 12-volt power supply and portable radio holder are included for long workdays. There's even a large, molded cavity designed for a water cooler. For added assurance, the 4700-D offers an impact absorption system to protect the rear outer decks.

Groundsmaster mowers are designed and built to a higher standard, and the 4500-D and 4700-D live up to their name. 10-gauge steel construction with 12-gauge welded reinforcements on the cutting decks handle your most rugged terrain – even direct impacts to the blade and housing. The innovative planetary gear wheel-drive system allows the traction system hydraulics to run with increased efficiency and less heat build-up. It's all part of the Toro commitment to making the world's toughest mowers. Contact your Turf Care sales representative for more details or visit us at www.turfcare.ca.

Count on it.
