

Editor's note:

We must be doing something right! Our paid subscriptions are at an all-time high and the staff of TurfGrass Trends would like to thank you for subscribing.

This brings me to my second point. The kind of material found in TurfGrass Trends is unique. There are probably many people in the industry — in academics as teachers or students and in the field who could benefit from each issue of TurfGrass Trends. If you know of other colleagues, students or researchers who would find TGT interesting, please let them know how they can subscribe.

Here's a sample of the kind of material they'll find helpful. We're working on a number of key topics, including: gray leaf spot, humates, anthracnose, growth regulators, grubs, root growth, salinity and more.

Again, thank you for supporting TurfGrass Trends!

Sue Gibson

In Future Issues

- Gray Leaf Spot
- The Role of Humates
- Grub Identification
- Life Cycles of Nematodes
- Managing Saline Irrigation
- Soil Temperature's Impact
