

particular attention at this time. Cannaert junipers are browned by applications of malathion, and DDT sprays will defoliate Amur river privet. A compilation of known phytotoxicities was published in *Pest Control* magazine in June 1960, and should be consulted for more specific details.

Those investigating the possibilities of entering the field of ornamental insect control should be interested in selected references. The four references listed below will provide the basic information

needed to provide ornamental insect pest control services for customers' outdoor problems.

**Be Cautious Near Power Lines**

"CAs must learn to live with the hazards of electricity," John M. Ferguson, extension agricultural engineer at Kansas State University, Manhattan, points out. "Just using good judgment and not taking any chances will help."

Pruning, spraying, and moving large equipment near high-tension lines were cited by Ferguson as possible dangers for CAs who do power line or substation weed control work.

**New  TWIN TANK model POWER KNAPSACK MISTBLOWER DUSTER**

*Spray, dust, wet-dust, and apply granules with the same machine; no extra attachments needed.*

**NO DISMANTLING OR REBUILDING** — Two separate back tanks and the exclusive KWH 'non-clog' nozzle permit single or simultaneous application of wet and dry chemicals. Cover up to **40 ft. swaths**. Simple fingertip controls give precise regulation of output and allow instant switching from liquid to dust or granules and vice-versa. Sturdy all-metal construction yet **only 27 lbs.**
