

will soon go into the third generation. Tree surgery potential increases with each generation of beetles as their number increases.

Information on the elm leaf beetles is contained in Kansas State University Extension Bulletin 386, "Control of Elm Leaf Beetles." Copies are available in County Agricultural Extension offices and from the Kansas State University, Extension Service, Manhattan, Kansas.

Outlines Woody Plant Control

"Chemical Control of Wood Plants," a recent publication by two University of California botanists, explores methods for removal of plant pests such as poison oak, chamise, and other shrubby vegetation (chaparral).

Authors O. A. Leonard of UC's Davis Department of Botany, and W. A. Harvey, Agricultural Extension weed control specialist, claim that removal of these wood plants would be an economic boon to California. "Some of the land now covered by this brush is suitable for conversion for range and crop purposes, other areas may be cleared for watersheds, and still others eventually will be partly cleared for rural living and recreation," they foresee.

Chief chemicals listed in the pamphlet are 2,4-D and 2,4,5-T and various formulations of the two. The publication, Agricultural Experiment Station Bulletin 812, is available from county offices of the UC Agricultural Extension Service and from the Division of Agricultural Sciences, University of California, Davis, Calif. 95616.
