

Qualities of "No-Mow" bermudagrass variety are explained to Quinton A. Johnson, president, Texas Turfgrass Assn., by Dr. E. C. Holt, left, and Dr. George G. McBee, right, of Texas A&M.

broadcast sprigging gave fastest and most uniform growth of zoysia, St. Augustine, and Bermuda varieties tested.

Special plant growth chambers and nematode studies were explained on a tour of Texas A&M's laboratories. Talks on turf heating, soil aeration, and

miscellaneous turf experiments highlighted the field day's afternoon session.

Explaining Texas studies to visitors were Dr. Walter Thames, Dr. Wendell Horne, Al Novosad, Dr. Neal Pratt, Cecil Brooks, Ken Beerwinkle, Alvin Zemanek, and Wallace Menn, all of Texas A&M.

Avoid Nitrogen Overuse

Some newspaper articles published recently have been advocating what some consider extremely high rates of nitrogen for lawns, according to Dr. Elwyn E. Deal, extension turf specialist at the University of Maryland. Rates as high as 6 to 8 pounds of nitrogen per 1000 sq. ft. for common Kentucky bluegrass, and 8 to 10 pounds for Merion Kentucky bluegrass have been suggested, Deal reports.

Current recommendations from most experiment stations suggest 3 to 4 pounds of nitrogen per 1000 sq. ft. per year for common Kentucky bluegrass and 4 to 6 pounds for Merion, Deal says. Roughly one-half of two-thirds of this amount can be applied in September and October, and the rest in March. With Merion, another light application may be made in May.

Severe disease problems, heat, and drought injury during summer often result when nitrogen is applied at high rates to cool-season grasses in the Maryland area, Dr. Deal cautions.

If You Work with Trees . . .

▲ Plan Now to Attend the

42nd International Shade Tree Conference Convention & Trade Show

AUG. 28 - SEPT. 2

CLEVELAND-SHERATON HOTEL ▲
CLEVELAND, OHIO

Delegates will be treated to an information-packed program including field trips, valuable talks on tree planting and maintenance, educational displays, and over 50 exhibits of new equipment.
