McCulloch Develops Pressure Release for Easy Saw Starts

A "de-stroking port," which acts as a compression release for easier starting, is an innovation on two new McCulloch power chain saw models.

Direct-drive model 795 and gear-drive model 895, the highest powered one-man saws made by the company, both have the easy-start feature.

McCulloch reports that the "de-stroking port" permits fullest use of the high compression ratios needed to achieve maximum power, yet it sharply decreases effort required to pull the starter rope. The device is actuated by a lever near the pistol grip of the saw. As the lever is pushed up, it opens a port in the combustion chamber. When the operator pulls the starting rope, heavy compression is released through the port.

Other engineering advances on the heavy-duty power saws include, automatic chain oiling systems, fingertip primers for quick starting, an idle governor for smooth idling, and ball and needle bearings throughout.

Inquiries about the new models can be sent to McCulloch Corp., 6101 W. Century Blvd., Los Angeles, Calif. 90045.

"Economy Tractor" Detailed

Description and specifications of "Economy Tractors" produced by Engineering Products Co. are offered in a new 12-page catalog which includes information covering a wide selection of attachments and optional equipment.

Sidehill stability and traction are added to the "Economy Tractor" by dual rear wheel option.

Producers claim the 10 to 12 horsepower all-gear-drive tractors weigh more and are more rugged than other tractors in their class.

Copies of the information piece are available on request. Write to Engineering Products Co., 1005-HF, Anoka Ave., Waukesha, Wis.

Pramitol 5P Introduced For Noncrop Weed Control

Long-term weed control on noncrop lands is easy with new, fast-acting pelleted herbicide Pramitol 5P, says its developers, Geigy Chemical Corp.

This broad-spectrum, nonselective weedkiller for use before or after weeds emerge, is for application around buildings, in equipment storage areas, or along fencerows and roadways, the company reports. It is said to be particularly effective against such tough perennials as Johnsongrass, Bermudagrass, and bindweed, as well as annual broadleaf and grassy weeds.

Recommendations are to use 1 to 2 lbs. of the herbicide per 100 sq. ft. of soil surface. A higher rate is suggested for deep-rooted perennial control, or for use in areas where there is a heavy rainfall and long weed-growing season. For broadleaf weeds and grasses, 1/2 to 1 lb. per 100 sq. ft. is effective, Geigy claims.

Once weeds are eliminated, the manufacturer notes, weed-free conditions can be maintained

Unveils Granular Herbicide

Borolin granular weedkiller combines proven herbicides in a free-flowing granulated material intended for dry application by shaker cans or cyclone type spreaders, U. S. Borax reports. The granules, formulated for the destruction of deep root systems of noxious weeds, are applied over the surface of weed-infested areas.

It is recommended for use on perennial broad-leaved weeds like bindweed, Canada thistle, leafy spurge, bur ragweed, Russian knapweed, larkspur, and poverty weed. Because of its high potency, Borax claims a low application rate is possible. Write U. S. Borax, 3075 Wilshire Blvd., Los Angeles, Calif. 90005 for details.
