# FALL FERTILIZATION FACTS

**FALL IS** the season for heaviest fertilization of **COOL-SEASON GRASSES** such as bluegrass, fescue, and bent. Weather conditions are right for maximum development of crown, rhizome, and stolon; soil moisture and temperature are best for efficient use of fertilizer; grass has less competition from weeds and traffic.

**FALL** fertilization is important to **WARM-SEASON** grasses too. They also need help to recover from summer damage and to be strengthened for the winter months ahead.

**FERTILIZER** choice should be Nitroform® organic nitrogen. It provides slow, steady feeding right up until temperature stops growth. Non-leaching, Nitroform stays in the soil to get turf off to a good start in the spring.

**FACTS** for fall fertilization with Nitroform... apply 2/3 of annual rate (12-20 pounds/1,000 square feet) to cool-season grasses. Apply 1/3 of annual rate (12-30 pounds/1,000 square feet) to warm-season grasses.
