Get the tops in shade tree spraying

John Bean ROTOMIST sprayers have the power to put protection where it's needed most—in the tops of the trees. Straight-through air delivery, unrestricted by elbows, angled air passages or deflectors, breaks up droplets for uniform deposit of chemicals and carries them throughout the tree for full coverage, economically and fast. □ ROTOMIST sprayers are available in

four basic models for all kinds of spraying jobs from trees and shrubs to mosquito and fly control, weed and brush spraying, windrowing leaves, spraying livestock, zoos and other areas where pesticides are needed. Find out how to save from 50 to 75% on equipment and labor with multi-purpose ROTOMIST. Ask your John Bean dealer now.

Types Of Chemical Vegetation Control

Abatement Vegetation Control: This is the use of a chemical (or combination of chemicals) at rates which result in a knockdown of existing vegetation and retardation of regrowth. One to three applications may be necessary depending on the length of the growing season and the chemical combination used. It is designed for areas where bareground is not necessary.

Bareground (Complete Control): The application of residual-type herbicides at high rates to give complete control of all vegetation. This is desired in areas where weed and grass growth creates risks of fire hazards, decreased maintenance efficiency, or where maintaining bareground economically is desired. Initially high rates are required but retreatments at one-half to one-third of the initial rate usually maintains the bareground.

Chemical Trimming & Pruning: This is the use of a contact herbicide to knockdown vegetation in close proximity to valuable plants. Weeds and grasses under fences, along drainage ditches, and under highway guard rails, may be controlled by treating the foliage of the undesired plants. Portions of limbs of trees that overhang on a right-of-way may also be controlled by directing the spray to those limbs. This is accomplished without material damage to the tree.

Selective Weeding: The control of certain plants with a chemical or combination of chemicals without permanent injury to desired vegetation. These chemicals may be applied either as pre- or postemergence treatments.

Brush Control: For summer foliage treatment, the application of chemicals to leaves and stems of brush during the active growing season. Complete wetting of the plant to the point of runoff is necessary for effective control. For basal stem applications, it is necessary to apply residual-type herbicides to the soil at the base of individual stems or clumps of brush in late winter to early summer. For stumps, the application of phenoxy herbicides or ammonium sulfamate to freshly cut stumps (within 24 hours) to prevent re-sprouting. For dormant cane treatment, the application of phenoxy herbicides in diesel fuel in the winter. Eight to 16 pounds active ingredient in 100-200 gallons of diesel fuel per acre is usually used.

GRAND PRIZE® Lawn & Garden Gypsum keeps turf, shrubs, trees growing thick and strong. That's because it acts much like a mineral "cultivator". Loosens hard-packed clay soil so air and water can penetrate, helps fertilizers live up to their full potential. Low in cost, high in efficiency, this natural soil conditioner supplies soluble calcium and sulfur in a readily absorbed form. And it also stimulates decomposition of organic materials. The result: seeds germinate faster, roots go deeper, foliage becomes luxurious. Write for specifics. 101 S. Wacker Drive, Chicago, Ill. 60606. Dept. WTT-83.

HAMMER KNIFE SAFETY FLAIL MOWER

JACK OF ALL — MASTER OF ALL

The all around turf maintenance machine every Park, every Golf course, every Public Works Department, every Landscaper — in fact, any one with turf to maintain — should have.

This versatile machine does an excellent job whether mowing fine lawns, shredding man sized weeds, mulching leaves or renovating — either thatch thinning or complete scalping for overseeding.

YOU'VE GOT TO SEE IT TO BELIEVE IT!
