employees. It's a good idea to have a pseudo-background check made before employees are hired. At least, check references, if any.

Bear in mind throughout your security plan that fire protection and security must go hand in hand. Plan fire exit routes that are workable. Some patented security systems have built-in fire alarms. (Incidentally, a fire alarm bell can be used to scare away burglars.) Develop your security system so that fire fighters will not be deterred by inaccessible locks or security gates that must be destroyed before entry is gained.

Security in your business is not the final objective in doing business. Rather, it must be implemented as a means of protecting your investment. The professional thief usually can outfox even the best devices if he desires. Your approach to security must be developed as a deterrent.

Park Irrigation Problems Toro Brochure Solves

For a park or recreation area to be an attractive, healthy, green environment for people, it must be watered adequately and consistently. And that can be accomplished with a minimum of manual attention, while actually conserving water, with the use of modern automatic underground irrigation systems, according to a new brochure from the Irrigation Division of The Toro Company.

The Toro brochure, titled "The Innovators Solve Turf Irrigation Problems in Park and Recreation Areas," points out that turf areas serving different purposes, such as picnic grounds and open play fields, require varying amounts of water at varying intervals.

Those variables can be accommodated with precision and efficiency, regardless of topography, soil or climatic conditions, geographic location or seasonal changes, with modern automatic irrigation systems, the brochure states.

According to Toro, irrigation equipment—including master controllers, satellite controllers, valves and sprinkler heads—can be matched to the specific watering needs of "any park or recreation area, under any given set of circumstances, present or future, anywhere, anytime."

Copies of the brochure may be obtained by writing to: Dept. PRA, Irrigation Division, The Toro Company, P.O. Box 489, Riverside, Calif. 92502.
