

## Groundwater Pollution Course Slated For Early November

An intensive three-day course in "Groundwater Pollution," directed toward professionals working in the water resources field, will be given at the Commodore Hotel in New York City, November 6-8, 1973.

The course is being offered as a continuation of the successful Water Resources Engineering Educational Series presented by University of California Extension and the Uni-

versity of California College of Engineering at Berkeley. Attendance at the course will be limited to 250 individuals.

Arrangements for the presentation have been made by the university in cooperation with Geraghty & Miller, Inc., consulting groundwater geologists and hydrologists, Port Washington, New York. The program is designed with special emphasis on pollution of groundwater in the northeastern states, where public agencies are becoming increasingly concerned about the deterioration of

this vital resource.

Speakers and panel discussions will cover the fundamentals of groundwater pollution as well as methods for abatement and control. Specific instruction will be given in the causes and types of groundwater pollution resulting from man's activities, including chemical, radioactive, biological, and agricultural pollution.

David K. Todd, Professor of Civil Engineering and Chairman of the Division of Hydraulic and Sanitary Engineering on the Berkeley campus, is the course director. Professor Todd is the author of "Ground Water Hydrology," "The Water Encyclopedia," and many other publications in the water field.

Advance enrollment is required, and early application is advisable because of the strict limitation on the number of attendees. Applications may be made by individuals or organizations, and each enrollee may assign one substitute to cover any session he may miss. The fee of \$185 per person covers all sessions, luncheons on the three days, and special course notebook containing reference materials and expanded outlines of the lectures.

Requests for additional information, registration and special hotel accommodation rates, should be addressed to: Continuing Education in Engineering, University Extension, University of California, 2223 Fulton Street, Berkeley, California 94720. Telephone: (415) 642-4151.

# Why let algae and water weeds limit your pond use?

OPEN THE WAY TO A PROPER WEED-FREE POND ENVIRONMENT WITH

## HYDROTHOL 47<sup>®</sup>

Without proper control, waterweeds and algae can:

1. Restrict or clog irrigation equipment.
2. Reduce water holding capacity of the pond.
3. Create an imbalance in fish population.
4. Limit swimming enjoyment.
5. Tangle fishing lines.

Hydrothol 47 controls many weeds and algae. It provides the proper balance to assure maximum use of this important resource. It helps reduce maintenance, lowers operating costs, increases efficiency and improves the aesthetic value of the pond.

Hydrothol 47 is easy to apply. It is effective, fast acting and biodegradable. It does not accumulate in fish or build up in water or on lake bottoms. It controls most algae, including Chara.

Specify Hydrothol 47 from your farm supplier, or, for more information, write:

Be sure to ask for the *AGRI-FELDMAN Sponsored Research Bulletin on Aquatics* which appeared in the March issue.

## SOUTHERN WEED SCIENCE SOCIETY

Come to Atlanta in January to participate in the 27th annual meeting of the Southern Weed Science Society. Speakers will discuss all aspects of weed science. Interpretation of the Federal Environmental Pesticide Control Act as it affects applicators will be a highlight of the meeting. In addition, sections will be devoted to agronomic crops, aquatic weeds and special weed problems, new developments in the industry and weed control in horticultural crops.

You are invited to attend . . .
