

# Improved grasses is TAES goal

The introduction and management of subtropical grasses and new legumes have been studied by Texas Agricultural Experiment Station and USDA scientists. Better adapted legumes and nitrogen-fixing grasses are sought as a partial solution to the high costs of nitrogen fertilizer. Seeds of more than 1300 types of grasses from South Africa were collected in a USDA-TAES

cooperative research project in 1976. They are being used to develop greater winter-hardiness in buffalograss, greater genetic diversity in kleingrass and improved forage quality in lovegrass. A unique breeding system in buffalograss that results in the production of true-breeding hybrids has been applied also in weeping lovegrass and guineagrass.

## BRANDT CAP CUTTER

### THE-ALL-IN-ONE Chemical Can Opener

The Brandt Cap Cutter easily opens a five gallon drum of chemical as it cuts a circular opening in the plastic spout.

## WE CAN Cut It . . .

1. Use the uniquely designed hand bar built into the bottom of the cap to pry off the chemical seal.

2. Pull up the plastic spout and remove the drum cap.

3. As you twist on your Brandt Cap cutter, you are cutting an opening into the plastic spout, eliminating the need for knives, screwdrivers and other sharp instruments.

4. RESULT—A circular opening with no jagged edges - ready to pour - in 1/3 of the time.

## and so can YOU
