

Maybe we'll cure cancer without your help, but don't bet your life on it.

The way it stands today, one American out of four will someday have cancer. That means it will strike some member in two out of three American families.

To change those statistics we have to bring the promise of research to everyday reality. And to expand our detection program and techniques. And that takes money. Lots of money. Money we won't have—unless you help us.

The American Cancer Society will never give up the fight. Maybe we'll find the answers even without your help. But don't bet your life on it.

American Cancer Society

Aerial photography useful for brush control

Ecological changes following brush control were studied on two honey mesquite infested deep hard-land range sites in north central Texas by the Texas Agricultural Experiment Station.

In the study, low altitude color infrared aerial photography was used to document the initial effects of brush control on secondary plant successions.

The first aerial photo mission was flown prior to treatment in the spring of 1973 and has continued to

be taken each spring and fall through 1976.

Supportive field data were collected in conjunction with each photo mission.

Together, the field and aerial photo measures provided information on plant response to brush control which could not have been available using either technique alone. For more information, telephone K. C. McDaniel, J. H. Brock and R. H. Hass, College Station, Tex., 713-845-7012. □

We demonstrate. You calculate.

If you're looking for the best trencher value, ask for a demonstration . . . because there's no better way to evaluate trenching equipment. That's why "The Diggin' Dutchman" offers demonstrations . . . and that's why he's giving away free electronic calculators* to encourage more of them.

Frankly, it's a good deal for both of us. It gives you a chance to compare Vermeer with other models under similar digging conditions. And it lets Vermeer demonstrate the built-in features and advantages that can't be shown on paper. **Advantages that may convince you to move up to a Vermeer.** With superior machine balance. Superior muscle on the job. Center-pivot articulation. High flotation on tracks or rubber tires. Operator convenience. Versatility as a combo and with a host of additional money-saving attachments.

Interested? Ask your Vermeer dealer for a demonstration of Vermeer Trenchers, Vibratory Plows, Combos, Rock Cutters, Tree Spades, Stump Cutters or any Vermeer equipment. He'll be happy to show you the machine best-suited for your operation . . . and give you a free calculator to help you formulate your own answers. Or, write —

Vermeer

THE DIGGIN' DUTCHMAN

*Offer limited to one free calculator per customer upon completion of demonstration on customer property or job site. Offer expires at discretion of Vermeer Manufacturing Company.
