

WT&T PRODUCTS

Easy-hitch snow plow reduces operator fatigue, contains a sealed valve for protection against snow and salt, and has a triple filter with built-in relief valves and by-pass system. Its hydraulics mount either directly to the hitch

frame, keeping hose lengths short and neat, or inside engine compartment to protect from the weather. Console sets neatly on the dash with only one wire entering the cab area. Model PV 200 (shown) is one in a line of plows from Swenson Spreader Co.

Professionals use Jobe's Tree Spikes every fall.

1. To provide a food reservoir for tree roots to feed on all winter.
2. So trees will leaf out earlier in the spring.
3. To promote faster growth.
4. To keep trees healthy and help prevent winter ice damage.
5. To protect their investment in trees.

Golf course superintendents and professional grounds keepers everywhere are taking better care of their trees. They know they're worth a lot. Jobe's helps keep that investment growing. Contact your nearest distributor or call 800/354-9360 for his name.

Use Panasonic's New Lightscope to Assist in Disease Identification and Control

Panasonic's new hand-held 30X microscope with its own built-in light source is tailor-made for pest control diagnostics and high impact sales presentations in the field.

It's a great little unit! The microscope is compact. Only 5 1/2" long and folds up into a handy leatherette carrying case. . . small enough to tuck into your pocket.

When you are ready to use it, simply unfold the scope and its AA battery-powered light source comes on. The lamp even has a blue filter to give you a sharper, more vivid image!

Want to make a really accurate diagnosis of exactly which species you're up against? Want to show your customer what their pest problem really looks like? The P.C.O.'s POCKETSCOPE will prove to be a valuable tool indeed!

Just place the lens over the specimen; focus the image with the scope's super sensitive thumbwheel and you'll be viewing that little insect 30 times larger than life!

You can place the transparent "chamber" right over a living specimen. The insect cannot escape. You'll be able to watch the insect walk around inside the viewing chamber. It will always be in sight. Your P.C.O.'s POCKETSCOPE will give you the necessary magnification to count antennae segments or leg segments where these factors determine identification of the species.

Panasonic FF-393 Microscope with Light

The POCKETSCOPE is the perfect tool for sales demonstrations with a high degree of professionalism!

Great, too, for accurate identification when sensitive insecticides may be called for.

It's long lasting! The batteries on your pocketscope will never run out because the unit was accidentally left on. The scope cannot be put into its carrying case without being refolded. And that turns out the light.

Magnifies up to 30X.
