V250

...a dependable lawn plow.

When your landscape work calls for underground installation and turf protection, consider the Ditch Witch V250. It's the most compact lawn plow available, and it has design features like a newly designed ground drive and plow-lift systems that make it a dependable, efficient alternative to trenching.

Put in complete underground sprinkler systems, plastic pipe services or power and communications cable. Let us give you all the details on the Ditch Witch V250 vibratory plow.

FEATURES

Winter Overseeding Test Results on Golf Greens

Mississippi State University tests by Associate Professor Jeff Krans and golf course
superintendent Charles Scroggins show few marked advantages of one overseeding
mixture to another. Mixture composition and seeding rates were the same as commer-
cially available products. Color, texture, and transition characteristics were evalu-
ated. 16

Late Flowering Trees Provide Mid-Summer Color, Interest

American Yellowwood, Goldenrain tree, Goldenchain tree, and Kousa dogwood are
compared for their contributions to summer landscapes. Doug Chapman extends
ideas to keep the landscape interesting in all seasons. 26

You'll find one on every National . . .

The little decal that means big savings!

It does more than tell you the belt sizes used on National mowers. It signifies our commitment to build a mower that can be maintained easily and inexpensively. It tells you that these are standard, off-the-shelf items available from your local supplier, not a special, high-priced belt designed by a manufacturer to be available only from him. **It means less down time!**

But standard belts are only part of National's value. There's the normal maintenance factor which is reduced by National's obviously easy accessibility. Field reports tell us that **National mowers are one-third to one-half the cost** of maintaining competitive models.

Then there's greater fuel economy. National's simple, functional design means as much as 44% to 62% less fuel consumption than competitive, power-robbing, hydrostatic type rotary machines.

Best of all, **National's initial cost is less** than that of other mowers sold to do the same job.

In these days when purchase price, fuel economy, continuous performance and longevity are most important, look to a National to do more work, with easier

Model 84" Triplex

and faster maintenance, over a longer period.

Write to us for the name of your nearest dealer. Then call for a demonstration.

Model 68" Triplex

There's more to make you forget about down time

We still cut our own gears, forward, reverse and differential, out of solid steel blanks. These durable gears, carburized, hardened and tempered, are heavier than those used in many automobiles today.

Bed knives have upturned lips for extra wear and longer service. It prevents scalping and will not allow small objects to enter and damage reels.

OUTLOOK

By Bruce F. Shank, Executive Editor

Conflicting signals on pesticide development

A recent increase in the number of pesticide products gaining registration will hopefully continue, but signals from industry and government seem to indicate otherwise.

Mergers may play a role equal to government regulation in the future development of pesticides. Mobil's sale of its agricultural chemical division to Rhone Poulenc was surprising in light of its participation in the Conoco takeover. Du Pont's interest in Conoco is fairly evident since it is highly dependent upon oil resources for its products. The Boots/Fisons merger in the U.S. seems to show togetherness is better in chemical development and marketing.

The result of mergers is obvious; fewer, bigger chemical companies. Does this mean that combining resources will improve research investment and result in more new products?

Or will it mean less competition, dropping of minor use products, and higher prices?

Both the cost of registration and liability in case of disposal problems is forcing chemical companies to be more selective in products offered. This extra caution is necessary for chemical companies to protect their market stability in today's merger-mad market.

Integrated pest management is expected to cut agricultural chemical sales in the next decade. Since most landscape products are developed from agricultural products, the prospects are not as rosy even though IPM is not expected to cut landscape chemical use appreciably.

Biological or bacterial production of chemicals is the new wave. No chemical company wants to be left out of that market as it develops due to technological breakthroughs.

Data compensation between chemical companies is still not resolved by the Environmental Protection Agency.

Data is still duplicated at high cost to support new registrations when it exists in the files of other companies.

On top of all this, EPA's new administration has reorganized the enforcement division. Companies now have to get new assurance of the rules before proceeding with current and new products.

The small manufacturer must feel lost in all this confusion.

Regardless of the intent of the Reagan administration to provide more encouragement to manufacturers, market conditions are keeping the lid on and finishing the job EPA started in the early 70's. The numbers get bigger and bigger. Small users have a harder time gaining the attention of chemical manufacturers. And the prices keep going up.

You can't blame the chemical companies. They, like you and I, are trying to survive. With so many conflicting signals, they have to be cautious and we have to fight harder for attention. **WTT**

**RATED

GREEN INDUSTRY NEWS

Medfly impact small on contractors

The Mediterranean fruit fly infestation has embarrassed state officials, traumatized consumers and imperiled California's lucrative fruit crop. Arborists and landscapers, however, have not been greatly effected. Tree people throughout the infected area in central California say that they were besieged by requests for help and information but weren't able to do too much to help.

"We had an awful lot of telephone calls. People wanted advice," says Susan Pitt, office manager of S.P. McClenahan Company in the Portola Valley. "We gave them support and advice. There was no real impact on business, but it caused an awful lot of office work."

Jane Lesh, secretary-treasurer of Lee's Tree Surgeons in Saratoga thinks that the controversy may have "caused people to look at their trees and think about them." Lesh voiced a common complaint when she explained that possible business increases from fruit stripping were offset by the "indecision about the whole thing. People would call one day and say 'you have to strip the walnut trees,' and the next day they would be told no."

Gil Mitchell, a partner in Able Tree Surgeons, San Jose, says that in addition to the "vacillation" of officials, demand for stripping was low because "people didn't want to put out the bucks for it. A lot of people thought they could strip the trees themselves or waited for the California Conservation Corps to come by or they just didn't give a damn.

Some didn't think it would be effective."

Even when people were sure they wanted their fruit stripped, tree surgeons weren't always able to be of service. "We just don't have the time to do it," says Susan Pitt. The man hour rate is too expensive to send a tree surgeon to strip trees. We advised clients to get someone local to strip the trees."

Arborists were not asked to spray against the Medfly. The government took care of the aerial and ground spraying and "preferred that people not spray by themselves," according to Pitt. Agricultural Pest Control Operators were asked not to duplicate the job. Mitchell says that there was a negative impact on spray business because people "think that malathion spray is

sufficient for all pest troubles. Sprayers lost a lot of business."

Malathion did eliminate many insects and was good for indoor landscapers, according to Alrie Middlebrook of Interior Landscape Design, Inc. in San Jose.

The long range effects of the infestation are mixed. The public is more aware of the importance of tree care. Some people may want to avoid plants, shrubs or trees that attract the Medfly. Fruit trees may not bear as well next year because of the damage caused by improper stripping.

One thing is clear. As Andrea Golden of Interior Landscape Design observed: "it will certainly be a lot of work for people cleaning up the mess."

Floraboard stalled in Congress

Congressional action on the Floraboard plan to establish a research and promotion program that would increase demand for flower and plant products has been delayed. The bill has been introduced in the House of Representatives, but has not yet been introduced in the Senate.

Floraboard is a "producer's program designed to increase demand for floral products similar to the programs for other agricultural commodities such as cotton, wool and milk," according to Barbara Kratchman, publications editor for the Society of American Florists (SAF).

Under the Floraboard system, growers and importers would be assessed a certain rate of sales per year, thus generating a fund of \$7-9 million in the program's first year. For the first two years producers and importers would pay at a rate of one half of a percent per year. Each year the rate increase may not exceed one quarter of a percent, with a maximum assessment of one and a half percent of sales. Only firms with more than \$100,000 of growth sales would be assessed.

The program will be administered by

the Floraboard, a 75 member board consisting of industry representatives nominated by producers' and importers' organizations, and appointed by the Secretary of Agriculture. The board's major objective, Kratchman says, will be to increase demand for flowers and plants and thereby "even out consumer buying patterns. On five major occasions each year (Valentine's Day, Easter, National Secretary's Week, Mother's Day and Christmas) growers sell all they can. They are forced to produce in an inefficient manner." Kratchman points out that "demand hasn't increased in six years. The full market potential of cut flowers, cut greens and foliage has not been realized.

"The program is producer conceived, created and directed," Kratchman emphasizes. "Because it's a mandatory assessment the government has to have its finger in it, but it is a producer's program. Floraboard will only implement what the producer's okay."

The program must have major industry backing. A referendum will be held and two thirds of all producers have to

25 year service award is presented during the Central Pennsylvania Golf Course Superintendents Association annual meeting to John Boyd of Hershey Country Club (left) by president David Portz.

sof'n-soil

- Loosens clay soil to improve drainage!
- Optimizes use of fertilizer, water, seed!
- Alleviates winter salt damage!
- Adds soluble calcium and sulfate sulfur!

gypsum works
four ways to
build satisfied
customers
for you!

Versatile Sof'n-Soil gypsum helps turf maintenance professionals boost business, Spring and Fall. In Spring, this natural soil conditioner loosens heavy clay soil structures and promotes drainage to increase fertilizer efficiency. In Fall, Sof'n-Soil gypsum protects against the harmful effects of winter deicing salt. Sodium chloride, toxic to most plants, causes heavy clay soils to tighten. This keeps water from leaching out the salt. The available calcium in Sof'n-Soil replaces toxic sodium attached to clay particles—permits new seed or sod to grow normally. And it's 100% safe! Non-burning. Non-toxic. Harmless to people, plants and pets. Look into the multi-profit opportunities of adding Sof'n-Soil gypsum application to your lawn service programs. Write to us for specifics at 101 S. Wacker Drive, Chicago, IL 60606, Dept. WTT981

LANDSCAPE

UPDATE

NLA landscape tour views Cincinnati

More than 200 members of the National Landscape Association toured a cross section of Cincinnati landscapes during the recent America Association of Nurserymen Convention and Trade Show there.

Ken Natorp, president of W.A. Natorp Co., Cincinnati, guided the tour to urban parks, office plazas, suburban apartments complexes, and two residential estates. Much of the construction and design had been performed by Natorp's firm, Thorton Environmental Industries of Maineville, Ohio, and Ammon Nursery, Florence, KN.

Highlights of the tour included Harper's Point, an apartment complex where many water features and plant material provide unusual privacy. Water sound was heard everywhere in the complex due to numerous lakes and waterfalls. One estate contained a three-acre private arboretum with numerous dwarf conifers and an elaborate collection of plant material. The tour also saw baseball star catcher Johnny Bench's home.

The 1982 NLA tour will take place with the AAN Convention in Honolulu, Hawaii, July 17-21. The NLA Board put finishing touches on its management Clinic held each February at the Gault House in Louisville, KY.

Deadline for ALCA award is November 15

Entries for the 12th Annual ALCA Environmental Improvement Awards are sought by the association. Awards in seven categories will be awarded: commercial landscape contracting, residential landscape contracting, interior landscape installation, interior landscape maintenance, exterior landscape maintenance, land reclamation/revegetation, and design/build landscaping.

A panel of judges will evaluate each entry on its own merits, without comparison to other entries. There is no limit to the number of awards the judges can make in any one category and no limit to the size of the project. Project entries will be accepted until November 15, 1981 at a cost of \$85 per entry (\$70 for members). Awards will be presented at the Annual Meeting in January.

Information and entry forms are available from Associated Landscape Contractors of America, 1750 Old Meadow Rd., McLean, VA 22102. Awards chairman is Ann Lambeth.

ALCA prepares for Palm Springs show

Exhibit space for the annual ALCA Trade Exhibit is going faster than usual for the 1982 meeting in Palm Springs, CA. Indoor and outdoor displays make the show attractive to more than 1,000 landscape contractors each year. The date for the show is January 24-27, 1982.

First interior landscape exam nears

The National Council for Interior Horticultural Certification plans to give its first exam during the Interior Plantscape Association Show, October 28-30, at the Radisson Hotel, St. Paul, MN.

NCIHC is an independent self-sustaining council formed to recognize qualified interior landscape contractors and their job worthiness. Requirements for taking the exam include five years experience in the field, four years experience and an associate's degree in horticulture, or three year's experience and a bachelor's degree. Each applicant must submit photographs and documentation of four jobs completed and belong to either IPA or the Interior Landscape Division of ALCA. The applicants must pledge adherence to a code of ethics.

The exam will also be given at the ALCA Show in Palm Springs, CA, in January 1982. ALCA has endorsed NCIHC and its certification program.

For information contact the National Council for Interior Horticultural Certification, PO Box 17148, Washington, D.C. 20041.

News from page 6

approve of the program or Congress won't pass it. The Floraboard Development Committee of the SAF will administer the referendum, with Congressional oversight.

In the House, the bill's primary sponsor is Rep. Tony Coelho (D.-California). By mid-July, 28 other representatives had signed on as co-sponsors of Floraboard. Floraboard hearings before the House Agriculture Domestic Marketing, Consumer Relations and Nutrition Subcommittee were scheduled for July 14. The hearings were postponed in order to allow the SAF time to respond to some questions raised by officials in the Office of Management and Budget and the Department of Agriculture.

Originally, administration officials contested 11 provisions in the bill. After meeting with SAF representatives, eight of the 11 problems were eliminated. The three remaining issues concern reimbursement of funds used to send out information to educate growers for the referendum, whether or not to have a consumer representative on the board, and the access government departments other than the Justice and Treasury Departments should have to the board's records.

At the SAF's convention in Denver on July 31, special sessions dealing with Floraboard, in general, and the issues dividing the SAF and the Administration, in particular, were held. During Congress' August recess, Administration officials, SAF representatives, and legislators met to iron out the difficulties.

The Senate version of Floraboard is sponsored by Senator S.I. Hayakawa (R.-California). Introduction of the bill was delayed as a result of the avalanche of legislation already introduced, the Senate's preoccupation with President Reagan's economic package and the Administration's objections. Senate strategists are not sure if the revised bill will be introduced in the fall on its own or as an amendment to the Farm Bill, the periodic reauthorization of major farm programs.

Regardless of the route taken, little opposition is expected. Barbara Kratchman says that although there has been some opposition from nonorganized growers, no organizations have come out against Floraboard. Floraboard's similarity to other agricultural boards which have been extremely successful has bestowed legitimacy to the legislation in the eyes of the Congressmen.

The precise time the bill will come

up is difficult to say. Congressman Coehlo says that Floraboard has an "excellent chance to pass in this Congress. No major objections have been raised. We're very optimistic that we'll get it done."

NURSERY

AAN show excels in Queen City

Despite hotel renovation, rain, and heat, the American Association of Nurserymen Allied Trade Show in Cincinnati was productive and well organized. Nine separate but related groups held board meetings, educational sessions, and visited the exhibits across the street in the convention center.

A few of the highlights were the landscape and garden center tours, the

Bess Myerson spoke during the MAN luncheon pledging her support to help keep that industry consumer conscious.

Mailorder Association of Nurserymen luncheon speaker Bess Myerson, and riverboat cruises at night. The presidents of nearly every Green Industry association were present at the recognition luncheon where Dr. Richard Harris of the University of Louisiana, Dr. Jacob Tinger of the University of Georgia, Dr. Eric Lawson of the University of Syracuse, and Richard Hutton of Conard Pyle were recognized for their contributions to the nursery industry.

Ohio State University was recognized for its 100 years of service to the industry and many OSU staff participated in the educational sessions including Dean Roy Kottman and Dr. Elton Smith. Topics included improving container production, poly house construction, marketing bedding plants, winter hardiness, nursery cooperation with arboreta, tissue culture and marketing.

EPA reorganizes enforcement

EPA Administrator Anne Gorsuch abolished EPA's offices of Enforcement and Planning and Management in a major reorganization that became effective on July 1. Gorsuch named John Horton, a New Jersey engineer and businessman to be the Assistant Administrator for Administration, a new position created in the reorganization shuffle. Horton will direct personnel, organization, information, data systems, facilities and fiscal and contract management functions. Other Assistant Administrators in the new reorganization will be Pesticides and Toxic Substances, Water, Solid Waste and Emergency Response, Research and Development and Air, Noise and Radiation.

Gorsuch also created two Associate Administrator positions—one for Policy and Resource Management and a second for Legal Enforcement Council. The Office of Policy and Resource Management will oversee resource allocations, standards, policy, regulations, legislative analysis and development processes and program and management evaluation activities.

The reorganization provides that enforcement relating to Pesticides and Toxic Substances, Solid Waste and Superfund, Water, Air and Noise and Radiation will be established in the program offices.

Sanford Harvey, Jr., now Deputy Administrator for Mobile Source, Noise and Radiation Enforcement was chosen by Gorsuch to be Director of the Office of Pesticides and Toxic Substances Enforcement. Kitty Adams, formerly a private environmental consultant, and Joseph A. Cannon, a staff member on the Reagan-Bush Presidential Committee, will each have the title of Gorsuch's special assistant for Regulatory Reform.

Disasters and Finances Plague Minneapolis

One of the most active shade tree programs in the country is in Minneapolis, MN. The spread of the Dutch elm fungus to that part of the nation several years ago destroyed thousands of elm trees and emphasized the need for such a tree program. More than 100,000 trees have been planted on city streets since 1975. Maple, linden, pin oak, hackleberry, green ash, honey locust and ginko trees now stand where elms once stood. While the city still has about 125,000 elm, 4000-5000 trees are lost each year. Over the next thirty years all of the city's elms will fall victim to Dutch elm disease.

This disease is not the only worry of the city forester, Dave DeVoto. Community grant funds from the Minnesota Department of Agriculture have been cut from \$2 million to \$1 million next year. To add to his woes, on June 14, a tornado blew through a part of the city and knocked down more than 4000 trees. It cost \$350,000 to remove downed trees and weakened limbs from trees that were damaged but not uprooted. The trees will not be replaced so quickly since it costs about \$75 for each new tree, not including labor and equipment costs.

Ingredient Analysis Reflects Well

How many times have you looked at a pesticide ingredient and wondered how well the percentage figures actually reflect what is in the product? The Maryland Department of Agriculture has just released the analytical results of about 1,500 analyses of pesticide samples collected from November 1, 1979 through October 31, 1980. Only 47 (approximately three percent) were withdrawn from sale because of adulteration or product quality below guarantee. The samples came from 357 registrants and are a credit to the pesticide industry in the United States.

THE LAND

A large yellow Massey Ferguson tractor loader is shown from a low angle, working in a field. The tractor is equipped with a large rear-mounted blade. The background consists of rolling hills under a clear sky. The overall tone is professional and industrial.

**Massey Loader Leaders
do it with rear-mounted
precision.**

Real efficiency with rear-mounted blades, box scrapers or scarifiers requires superior maneuverability and precision control. And that's what you get with a Loader Leader.

In fact, Massey-Ferguson tractor loaders make a lot of sense because they offer time and work-saving innovations at *both* ends. Along with the scarifier/scrapper, there's also a fast-cycling loader bucket. So, you

SHAPERS

can load, backfill, scarify, scrape and level with one MF machine.

MF tractor loaders are equipped with all the features you need to help keep your operation profitable. There's MF Instant

Reverse transmission, Ferguson set-and-forget draft control and tight-turning hydrostatic power steering for precision landscaping, even in close quarters. And all Loader Leaders offer economical Perkins diesel

engines, heavy-duty front axles, single lever loader control, and hard-nose construction.

Stop in and check out one of the four Loader Leader models at your Massey dealer. Massey-Ferguson Inc., Des Moines, Iowa 50315.

News from page 11

Participating at the show were American Association of Nurserymen, All-America Rose Selections, Garden Centers of America, Horticultural Research Institute, Mailorder Association of Nurserymen, National Association of Plant Patent Owners, National Landscape Association, Wholesale Nursery Growers of America, and representatives from Associated Landscape Contractors of America, Professional Grounds Management Society, and the National Arborist Association. The 1982 show will take place next July in Honolulu, Hawaii.

LANDSCAPE

Shaw resigns post as ALCA regroups

The executive director of one of the most aggressive associations in the Green Industry, The Associated Landscape Contractors of America, has tendered his resignation to the board as of August 31, 1981. John Shaw served ALCA for four-and-one-half years and was the first full-time director not allied to an association management group.

ALCA's planning board recently approved a goal to regionalize more association functions. Recession has put added pressure on all associations, Shaw said, and the average stay of association executives is four-and-one-half years. "ALCA has a great future, as does the entire industry," Shaw said.

RESEARCH

Nebraska alumni honor Fred Grau

Fred V. Grau, president of the Musser International Turfgrass Foundation and developer of Penngift crownvetch, is one of seven recipients of the 1981 University of Nebraska — Lincoln Alumni Achievement Award. The award recognizes alumni who have compiled an outstanding record of achievement.

Dr. Grau worked with Dr. Musser at Pennsylvania State University, served as head of the United States Golf Association Green Section, and participated in the development of the aerifier, Meyer zoysiagrass, and numerous other turf management technologies. He resides in College Park, MD, and owns a farm where he produces crownvetch seed in Pennsylvania.

UPDATE

San Francisco to welcome supers in '85

Golf Course Superintendents Association of America President Mike Bavier recently announced the selection of the George Moscone Convention Center in San Francisco as the site of the 1985 International Turfgrass Conference and Show, January 30 to February 5.

The growth in size of the show in the past four years has caused the association to look for larger convention facilities. The 1981 show in Anaheim had a gate total of 17,950 and more than 200 exhibitors.

This winter the show will take place in New Orleans and will return to Atlanta in 1983. Las Vegas is set for the 1984 meeting.

Architects predict increase in building

The American Society of Golf Course Architects predict that golf course construction and remodeling will increase next year. ASGCA President Dick Nugent said hazards must be adapted to avoid penalizing the good golfer. ASGCA polled its members for the information. It discovered that members believe most construction will entail real estate developments although solid interest for more municipal and public courses continues in most sections of the country. The natural look will be sought in the future.

Palmer Maples is Summit Chase super

Palmer Maples, long time director of education for the GCSAA, has accepted the superintendent's position at Summit Chase Golf Club in Snellville, Georgia. He began his new position in mid-August and moved his family there in early August. He will contribute significantly to the club and to golf in the Atlanta area.

New York turf conference moves to Albany

The New York State Turfgrass Conference and Trade Show will be held in Albany, NY, from November 17-19 according to Ann Reilly, executive director. The show will take place in the Empire State Plaza. Exhibit space is two-thirds sold already.

This year NYTA has added two afternoons of equipment demonstration especially designed for turf equipment mechanics. This is in addition to a broad educational program for all phases of turfgrass management. Recertification credits are given for attendance and apply toward pesticide license requirements.

For further information contact Ann Reilly, 210 Cartwright Blvd., Massapequa Park, NY 11762. Exhibitors should contact Ed Worthington Corp., 50 Petrova Ave., Saranac Lake, NY 12983.

NGF calls forum to discuss changes

The National Golf Foundation is inviting golf leaders to a "Forum of Golf" in Dallas, October 18-20 to discuss and recommend ways to counteract serious changes in the business of golf in the past few years.

The rising age of the typical golfer and the decreasing rate of participation are just two of many topics the leaders will seek solutions to. James Long, senior vice-president of Spalding and NGF president will chair the meeting. Also attending will be PGA's Deane Beman, LPGA's Ray Volpe, and PGA's Joe Black as well as other members of the NGF board.

The goals of the group are to devise plans to increase the number of golfers, increase the rounds of golf played, and increase the number of golf courses where needed.

NGF is directing more of its effort toward promoting the game of golf, in addition to keeping vital statistics on its state.

FIVE YEAR TESTS REVEAL TRAITS OF WINTER OVERSEEDING MIXTURES

By Jeffrey V. Krans, associate professor, crop science; and Charles Scoggins, golf course superintendent, Mississippi State University, Mississippi State, Mississippi.

Winter overseeding is the late fall seeding of one or more cool season turfgrass species/cultivars onto the surface of an established warm season turf. Winter overseeding practices are well established and date back to the early uses of grass for putting surfaces in the South. Overseeding of bermudagrass putting greens provides an improved putting surface and more aesthetically pleasing turf compared to the dormant turf of bermudagrass. Species selection for winter overseeding putting greens 10-12 years ago was dominated by annual ryegrass. Today, improved cultivars of perennial ryegrass are the predominate species used in winter overseeding. The number of commercially available perennial ryegrass cultivars advertised for winter overseeding on putting greens has increased each year and presently stands at approximately 20 available cultivars.

The use of perennial ryegrass for overseeding putting greens includes both monostands and polystands (blends and mixtures). Overseeding mixtures of perennial ryegrass are generally composed of one or more cool season turfgrasses including fine-leaved fescues, rough bluegrass (*Poa trivialis*), Kentucky bluegrass and creeping or colonial bentgrass. The perennial ryegrass component of these mixtures provides rapid establishment, environmental hardiness, wear tolerance and sustained and uniform growth. The other turfgrass components used in these mixtures are generally added to provide improved characteristics of putting quality (fine texture,

high shoot density, smoothness, etc.) and/or regulate stand persistence in the spring.

The evaluation of cool season turfgrass blends and mixtures for winter overseeding putting greens is unique compared to other types of turf evaluations. Winter overseeded species are evaluated as an annual turf, when in fact, all species except annual ryegrass are perennial in nature. In addition, seeding rates of overseeded blends or mixtures on putting greens exceed by 3 or 4 fold recommended seeding rates for establishment of these same species when planted as a perennial or non-overseeded turf. The evaluation of overseeded species takes into account not only turf quality as a component of performance, but establishment rate and density of the overseeding (fall transition) as well as rate and schedule of overseeding dieback (spring transition). Ideally, an overseeding selection for putting greens should provide rapid, uniform and high initial shoot density during fall transition, followed by sustained, uniform and high shoot density and green color throughout the winter and early spring. Spring transition, which occurs in late spring or early summer, should be a smooth and controlled dieback of the overseeding allowing a gradual and uniform green-up of the bermudagrass without significant sacrifice in putting quality.

The most common approach to a turfgrass evaluation program is to utilize replicated field trials at state, federal or private research locations using small plots (20-50 sq. ft.). Although this evaluation approach is beneficial and most times the only available procedure, the information gathered is limited by plot size and actual elements of turfgrass use and culture. The close proximity of small plot field trials allows rapid and convenient observations of comparative difference between entries. These comparative differences, however, can be readily overemphasized and may or may not be significant to the consumer (homeowner, golfer, etc.).

In the fall of 1976, an overseeding evaluation approach was undertaken to evaluate overseeding species performance using large plots (1000-2000 square feet) and a cultural and use environment representative of putting greens. This evaluation approach was conducted by utilizing an 18-hole public golf course owned and operated by Mississippi State University. All entries were evaluated by splitting each of the 18 putting greens into half and each half section seeded to a randomly selected overseeding entry. This design provided a total of 36 plots or half greens. All

Greens were divided in half for tests. Differences were not apparent to golfers either in appearance or play.

**Now,
one-shot
white grub control.**

New

OFTANOL[®]

One application controls white grubs from season-to-season.

There's only one insecticide that controls white grubs from season-to-season.

New OFTANOL insecticide from Mobay.

OFTANOL delivers unparalleled residual control of white grubs. In fact, you can expect one application of OFTANOL at the highest recommended rate to control white grubs until about the same time next year.

OFTANOL also offers these additional advantages compared to present white grub materials:

- OFTANOL does not require watering-in.
- OFTANOL does not tie-up in thatch.
- OFTANOL does not require critical application timing.

One application. Once a year. That's the OFTANOL one-shot advantage.

¹Visual performance rating scored 1-9; 1 = poorest and 9 = best.

entries were replicated twice and provided space for 18 selections. Overseeding entries used in the evaluations were limited to commercially available monostands, blends and/or mixtures marketed for overseeding use. Performance evaluations were based on a minimum of monthly visual observations and ratings using a numerical scale of 1 — 9; with 1 = poorest and 9 = best. Performance ratings were conducted by various groups including golf course superintendents, golfers, golf professionals and university students and researchers. All seed companies participating in these tests supplied entries on a voluntary basis and were required to supply seed for 2 replications. Seeding rates and choice of entries were decided by the seed companies cooperating. Due to changes in yearly participation of individual seed companies and entry choices, a wide variety of different entries were used in the overall 5 year evaluation period. The list of overseeding entries used for one or more years over the past 5 years is presented in Table 1. Overseeding performance scores which are reported represent only those selections which were evaluated 3 or more years out of 5 (Table 2). The findings in overseeding performance, as shown in Table 2, are generally representative of the other entries included in the evaluation program 2 years or less. The entire evaluation using putting greens for plot area was carried out over 5 consecutive years (1976-1980).

The 5 year average scores showed little or no difference between winter overseeding entries when compared side by side under actual putting green conditions. The anticipated complaints from golfers putting across the center dividing lines on each green rarely occurred. Nearly all golfers were surprised to learn they had just played across 18 different overseeding combinations. No entry evaluated showed consistently

high or low performance ratings across the 5 year period. The greatest similarity in putting quality among overseeding entries were observed for the perennial ryegrass blends and monostands. The characteristics of texture, uniformity, density, disease resistance, wear, fall transition and spring transition were similar for all perennial ryegrass blends and monostands evaluated. Color was slightly different among several perennial ryegrasses in which the cultivars Regal, Citation, Derby, and Caravelle showed a slightly darker green coloration; whereas, Loretta showed a lighter green color when compared to the other perennial ryegrasses.

Differences in overseeding performance that were noticed in addition to color were representative of overseeding mixtures including rough bluegrass (*Poa trivialis*). These overseeding mixtures which included perennial ryegrass plus rough bluegrass were Marvelgreen + Sabre, Super Celebrity or Dixie Green + Sabre. Differences in these mixtures compared to blends or monostands of perennial ryegrass were most noticeable in the spring. The rough bluegrass mixtures generally showed higher shoot density, finer-leaf texture and greater smoothness compared to the other entries. Mixtures containing rough bluegrass, however, did not rank superior overall as based on a seasonal average. This was due, in part, to poor spring transition characteristics which resulted in prolonged persistence into the spring and inhibition of the bermudagrass spring green-up.

The differences in seasonal average scores were not found statistically different and therefore can not be attributed solely to the overseeded entries. Greens characteristics, including soil type, drainage, slope exposure, shade and/or other factors collectively resulted in more variation than could be overcome by an individual overseeding entry. This result points out the high variability in environmental and site conditions golf course superintendents manage turf and close similarity of the overseeding entries evaluated. This similarity in putting quality and performance ratings of the perennial ryegrass entries provides the consumers (golfer, golf course superintendents, golf professionals, etc.) with the option to direct additional attention to price and service when products perform equally. The overseeding mixtures including rough bluegrass showed improved characteristics of putting quality and performance which can be utilized by individual golf courses based on needs. Care should be taken, however, to manage and control the inherent growth characteristics of rough bluegrass for a smooth and controlled spring transition.

Any turfgrass seed works

**RUGBY
KENTUCKY
BLUEGRASS
IS DESIGNED TO
WORK IN THE
REAL WORLD.**

well with constant attention.

RUGBY KENTUCKY BLUEGRASS. IT DOESN'T NEED CODDLING TO LOOK GREAT.

As a turf professional, you know all the tricks to making grass look terrific. You lavish water and fertilizer on it, overseed, apply herbicides, and take great care in mowing.

But times are changing. Increasingly you're finding yourself pinched by escalating costs for materials and labor. And there's a growing movement among environmentalists to lessen dependence on fertilizers.

Rugby Kentucky Bluegrass answers these problems.

YEARS OF TESTING.

Rugby is a new Kentucky bluegrass. But it's not unproven. Before it was ready to be introduced to you, years of extensive testing were performed under a broad range of climatic and soil conditions. Test sites were located not only in the United States, but Canada as well.

The results? Our testing has shown Rugby to be unique. It's a truly *different* variety from anything else on the market, with superior performance.

How is it superior? Read on.

A TRUE LOW-MAINTENANCE TURF.

The most singular advantage of Rugby is its ability to provide high-quality dark green turf when maintained at *low* nitrogen fertility and restricted moisture levels.

Most improved Kentucky bluegrass varieties are *not* low-fertility types. You may be told they performed well in turf trials. Unfortunately, you're *not* told that those trials are often conducted using *optimum* nitrogen levels. So it's no wonder you have to fertilize the heck out of these varieties to get good results.

Not so with Rugby. *You can actually get better results with Rugby than with other Kentucky bluegrass varieties while using less nitrogen fertilizer.*

And you'll also save on the *labor* it would take to apply that extra fertilizer and to do the extra mowing.

A HIGH-QUALITY TURF.

But no matter how much we tell you about the low-maintenance aspects of Rugby, ultimately you look for — and demand — *superior turf*. Your professional standards wouldn't settle for anything less. And we wouldn't want it any other way.

Rugby has a rapid spring green-up rate and excellent fall color. And it

also displays *sustained growth during the mid-summer heat stress period*, even under low nitrogen fertility and restricted moisture.

Moreover, Rugby possesses a high level of resistance to most of the common and current turfgrass diseases. This is another factor which may well result in significant savings in turf management costs.

THE ENVIRONMENTALIST'S GRASS.

Using less water and fertilizer means potential dollar savings for you, of course. But you can also take satisfaction in the fact you'll be using *fewer natural resources*.

By now you're well aware of the increasing social consciousness among the population in this regard. And by making available a Kentucky bluegrass that fits the world of the '80's, we believe we're fulfilling an important need.

For more information on Rugby, write Rugby Kentucky Bluegrass, P.O. Box 923, Minneapolis, MN 55440.

Rugby
KENTUCKY BLUEGRASS
For low-maintenance turf

LATE FLOWERING TREES PROVIDE MID-SUMMER COLOR, INTEREST

By Douglas J. Chapman, Horticulturist, Dow Gardens, Midland, MI

Trees which flower early to mid-summer can be particularly important in the landscape. These trees add not only color at a time when the landscape is otherwise green, but diversity as well. Four particularly exciting plants for mid-summer bloom include Yellowwood, Goldenraintree, Kousa Dogwood, and Goldenchain Tree.

American Yellowwood (*Cladrastis lutea*), a native mid-summer flowering tree is particularly spectacular. This round-headed tree, at maturity, reaches 30 to 50 feet in height and width. While young, it is somewhat narrow and upright. V-crotches can be a problem, but prompt pruning will correct the problem. The bark is smooth and gray, resembling American Beech. The pinnate compound leaves make this plant particularly interesting. Each leaf has seven to eleven leaflets which are oval and smooth.

The new and summer foliage is a vibrant yellow-green. Fall color, which is quite dependable in Central Michigan, is a good yellow to brown. The white flowers are at their peak in Central Michigan during mid- to late June. These drooping flowers normally are in full bloom in the Boston and northern Ohio areas during late May or early June. The white flowers are held in drooping clusters or racemes, 8 to 16 inches in length. Fruit becomes brown and is quite effective with the shape mirroring the flower shape. This is an excellent specimen tree in groups or as single plants.

Yellowwood prefers fertile, well-drained soil, while being adapted to a wide range of pH's, from acid to alkaline. It should be planted in full sun or at least 80% sun. When planted in semi-shaded areas, *Botryosphaeria* Canker can become a severe problem.

Drooping clusters of white flowers grace American Yellowwood in late May or early June in northern states.

Goldenraintree (*Koelreutaria paniculata*) has a bipinnately compound leaf, about 14 inches long, with seven to fifteen leaflets. At maturity, this perfectly round, dense small tree, reaches 25 to 35 feet in height. The leaves are purple when unfolding early in the spring, becoming a dull green during the summer with dependable yellow to yellow-orange fall color. *Koelreutaria* flowers during mid-July with unique bright yellow flowers, 12 to 15 inches in length.

This plant competes extremely well in turf or in beds. It prefers well-drained to droughty soils and is quite adaptable to areas of high air pollutants, as well as salt and many urban problems. It is a particularly outstanding tree with few or no insect or disease problems.

The bright yellow flowers in mid-July are just one benefit of the relatively disease and insect free Goldenraintree.

Kousa Dogwood (*Cornus kousa*), a native of China, should be looked upon as an exciting understory or specimen plant in full sun. It is more upright than Flowering Dogwood, usually reaching 25 to 30 feet in height. When young, it is somewhat upright-vase-shaped, becoming oval at maturity. It can be grown as a multiple-stem or single-stem tree. The bark is spectacular as the plant becomes older, exfoliating, being multi-colored (pale yellow and brown).

Flowering in the most northerly area is dependable. In Central Michigan, it flowers from early through late June, sometimes into July after the leaves are out. Kousa Dogwood's flowering bracts are a pale to clear white. They are usually somewhat pointed and, again, extremely low temperature hardy, often to minus 30°F. Of the cultivars available, *Cornus kousa chinensis* 'Milky Way' is the most dynamic, with a somewhat more spreading habit of growth and the flowers being considerably more delicate with

extremely pointed bracts. *C. kousa* can be used as a small tree specimen or in mass planting. It seems to thrive in sunnier locations as contrasted to *C. florida*.

The fruit is effective late August through October, being 1/2 to 1 inch in diameter. This reddish, globular fruit somewhat resembles raspberries. Although seedy, they are quite tasty.

The summer foliage is a good clear green with fall color either not developing or developing extremely late in the season. When it does develop, the fall color is a dull maroon. Kousa Dogwood's main advantages over our native *C. florida* include extremely low temperature hardy flower buds, ease of transplanting, and flowering during early summer. Kousa Dogwood is an exciting addition to our summer landscape.

Goldenchain Tree (*X Laburnum watereri*) is 12 to 16 feet in height with a 9- to 10-foot spread. The foliage is a dull blue-green with little or no fall color. The trifoliate leaves are all elliptical in

June flowers of the Goldenchain Tree add to the tree's effectiveness in mass plantings.

shape. Perfect yellow flowers come out during early or mid-June. They are borne in 7- to 10-inch pendulous racemes. This small tree is a good specimen in full sun or in protected areas, usually exposed to the north or northeast.

These trees with summer flowers are not only outstanding as specimens, but also integrate well into mass plantings. They all seem relatively drought tolerant, having few or no insect and disease problems.

Although their fall color varies, the uniqueness of early to mid-summer blooms makes these truly exciting additions to the landscape. Although borderline hardy in Central and Northern Michigan, they should be considered somewhat commonplace from Detroit all the way south to the Washington, DC area.

When looking for diversity with excitement, yet low maintenance, Yellowwood, Goldenrain-tree, Kousa Dogwood, and Goldenchain Tree should be high on the list. **WTT**

GYPSY MOTH INVASION RUNS ARBORIST RAGGED

by Gil Troy, editorial assistant

It's 4:30 a.m. The arborist wearily hops into his truck to start yet another day of non-stop spraying against the gypsy moth. He may work as late as 10 or 11 this night. Some of his fellow arborists start spraying college campuses, industrial parks and normally bustling city streets at that hour. Our hero works through the Memorial Day weekend. He works over the Fourth. Hopefully, he'll be able to take some time off soon. But it's not up to him—he's held captive by the whims of the dreaded gypsy moth.

This spring and early summer, throughout the Northeast and scattered parts of the rest of the country, arborists took up the herculean task of controlling the gypsy moth. By many accounts, this year's infestation was the worst ever. Experts estimate that between 10 and 15 million acres were defoliated this year, surpassing the record five million acres defoliated in 1980. The area from Maine through Wilmington, DE, extending as far west as Pennsylvania Dutch Country, was blanketed by the ravenous insects. Isolated infestations were reported in California, Oregon, Nebraska, Michigan, Ohio, Florida and Vancouver, British Columbia.

"I've been spraying since 1955, and this is the worst year I've ever seen," says Robert Mullane, president of Alpine Tree Care, Inc., in White Plains, NY, confirming most arborists' observations. Erik Haupt, president of Haupt Tree Company in southwestern Massachusetts, contends that this year "had the greatest variety in the stages and life cycle of the moth I've ever seen in 25 years. The gypsy moths started laying eggs in late April, early May, and they were still hatching the end of May into June. There were all stages of instar at the same time. This was more from lack of food rather than pronounced, staggered hatching."

Arborists Inundated

The intensity and the expanse of the infestation caused widespread public distress. Arborists were inundated with calls. "You couldn't reach any tree company," says Walt Dages, public relations manager of the F. A. Bartlett Tree Company in Stamford, CT. "A lot of people complained that our phone was off the hook." The firms weren't refusing to answer calls; they were constantly on the phone. Alpine Tree Company didn't take any orders after April 1. Other companies were also unable to satisfy all of the customers in need.

Carl Bosenberg, president of H.F. Bosenberg and Son Corporation in North Brunswick, NJ,

didn't take over half the calls that came in. "It's very unfair to customers to say 'yes, we'll be there to spray,' when you know in your heart that you'll never be able to make it. It's like a guy with a doctor's appointment at two who sits around until four, and then is rushed through by the doctor who's in a hurry to get home."

Bosenberg is not willing to sacrifice the quality of his service in order to satisfy the increased demand. "We could have done a lot more if we had been willing to cut corners. We don't try to produce volume. Doing fewer jobs and doing them well is more important. Others' business more than doubled. They'd work until 10 and wake up at five. It's fine if you do it for a couple of days. But after a while, you become so bleary eyed you're just going through the motions."

Business Booms

Despite all the unanswered calls, business increased dramatically. Bosenberg's company had at least a 30-40 percent increase in spraying jobs over the previous year. Estimates by other arborists ranged from a 20 percent increase to 100 percent. Robert Mullane says that established companies would tend to have a less dramatic rise. "When you've been in business a long time you get a lot of regular customers. Ninety to ninety-five percent of our business is from return customers."

The increase experienced by both new and old firms strained supplies of chemicals, labor and equipment. Eric Haupt says that even though his company was braced for an increase in demand, they still ran out of spray on occasions. "When you're involved in a major increase of that type, no matter how carefully you plan it's difficult to set up.

"It was impossible to foresee," Haupt explains. "We ran through three, four, five times the amount of spray material expected. The gypsy moth respects no calendar, it respects no weather forecast. You're vulnerable to weather and to other factors. But you have to move quickly, a tree has leaves one day and is defoliated the next."

Walt Dages estimates that business at the Bartlett Company is "almost double. We could have done a lot more but we lacked equipment and trained manpower." Bartlett and other firms updated, reequipped, and purchased new machines.

Supply and Demand

The Agriculture Machine Division of FMC

Roundup helped Dave Portz save a cool 50% on watering costs when the weather was hot.

When grounds superintendent Dave Portz renovated with Roundup® herbicide, he wanted to knock out a near-100% infestation of poa annua without inconveniencing his golfers.

He got what he wanted—and a great deal more.

When Dave renovated 14 fairways at Brookside Country Club with Roundup, the members played as soon as the treated area was dry.* And he now has an 80% ryegrass, 20% bluegrass mix which looks great, stands up in dry weather, AND costs a lot less to manage than the old poa.

Dave saved 50% to 60% on watering costs alone during the hot, dry summer of 1980. He watered only when he absolutely had to, and found that the new turf resists drought much better than poa.

What's more, Dave saved roughly \$5,000 on fungicide treatments (from 12 down to just one), plus more on labor, electricity and wear and tear on pumps. It added up to huge savings.

You can also use Roundup for general cleanup around trees, sandtraps, fence lines, tennis courts—most places weeds are a problem.

For fast, clean, manageable turf renovation—and general weed control work—nothing works like Roundup.

**Nothing works
like Roundup.**

Call 800-643-5599 (in Arkansas, 800-482-9097) to hear Dave Portz tell you why he renovated with Roundup.

ALWAYS READ AND FOLLOW THE LABEL FOR ROUNDUP. Roundup® is a registered trademark of Monsanto Co. © Monsanto Co.1981.

*Apply Roundup to fairway; reseed 7 days after application. While Roundup goes to work, golfers keep playing over treated turf. RUP-SP1-113D

"This John Deere tractor runs in places I can't even walk."

—Mike Dougan, Mike Dougan Enterprises,
Olathe, Kansas

Mike Dougan is in the seeding business. He plants grass and other seeds on hills and tricky grades alongside of highways. And in places where a tractor could easily get stuck.

According to Dougan, "You almost never find yourself on flat ground!"

So when he started looking for a tractor to handle his jobs, Mike Dougan needed one that could really perform.

It had to be powerful enough to get him in and out of tough places. Yet small enough to maneuver easily in tight spots.

The tractor he chose was a John Deere 1050 Diesel with factory installed mechanical front-wheel drive (optional).

The power to run uphill.

The John Deere 1050 Compact Utility Tractor has a 33-PTO-hp liquid-cooled diesel engine. Which makes it real easy for Dougan to pull right out of tough places.

"We get in tight spots all the time," says Dougan. "The 1050 with mechanical front-wheel drive moves right out!"

The 1050 is also the only diesel tractor of its size to have an engine that's turbocharged.

A turbocharger gives you more power in a smaller package. And fewer emissions. Not to mention superb fuel economy.

Built like a much bigger tractor.

To look at the 1050, or any of our other compact utility tractors, they don't seem all that big. Nonetheless, they have features you usually find only on bigger "full-size" tractors.

The transmission has 8 forward speeds, starting with a 1 mph "creeper" gear to a transport gear that moves you along at a speed of around 12 mph.

The 1050 has a load and depth sensing 3-point hitch (Category 1) that gives you better control of working depth in a variety of soils.

A continuous running 540-rpm rear power takeoff allows PTO-driven implements to run even while the tractor is standing still.

There's a differential lock, a swinging drawbar, and a choice of more than 20 power-matched implements.

We also offer a choice of high-flotation turf tires or traction tread tires.

They keep running year after year.

Of course, whether you prefer the 33-PTO-hp 1050, the 27-PTO-hp 950, the 22-PTO-hp 850, the new 18-PTO-hp 750 or the new 14.5-PTO-hp 650* they're all built to last. And big enough to handle most landscaping and many light construction jobs.

"If you're going to spend money on a tractor, you might as well buy quality," says Dougan. "We haven't had a single problem!"

Ask your John Deere dealer for a demonstration. See how solidly these tractors are built. How smoothly they run. How simple they are to service. How much work they can do.

And why so many people agree that "Nothing runs like a Deere!"

Nothing runs like a Deere®

For more information, write John Deere,
Dept. 67/68, Moline, Illinois 61265

*Maximum PTO hp at 2600 engine rpm for the 650 and 850, 2400 engine rpm for the 750, 950 and 1050. All ratings by official test except for the 650 and 750, which are factory-observed.

The Task Master Tractors from John Deere

Circle No. 115 on Reader Inquiry Card

Corporation, Jonesboro, AR, is the largest manufacturer of sprayers in the United States. "We tried to foresee demand, but we still didn't have enough. We sold out earlier than we ever had," exclaimed Marion Meredith, advertising manager at FMC. "Our 600 and 1000 gallon sprayers ran out in early spring. We ran out of our smaller units in early summer." Although FMC hasn't started building new sprayers yet, dealers are already ordering sprayers for next spring.

Not all equipment companies were overwhelmed by the gypsy moth infestation. A spokesman for Broyhill Company in Dakota City, NB, says the gypsy moth infestation in the Northeast "hasn't changed a thing. The Mediterranean fruit flies had more of an impact on our sales."

Chemical companies that supply Sevin, methoxychlor and other weapons for use against the pest experienced sales increases, but did not run out of material. Roy Lockett, communications manager of Union Carbide Agricultural Products Division in Raleigh, NC, estimates that even though less than 10 percent of their sales of Sevin are used against the gypsy moth, the fight against the moth helped make 1981 "the best year we've had in sales for our program. The supply fluctuated, but we had anticipated heavy use because of the gypsy moth."

Miller Chemical and Fertilizer Corporation had also anticipated an increase in demand. Charlie Svec, executive vice president of the Hanover, PA firm, said the gypsy moth "very definitely had an impact" on the Sevin and methoxychlor his company sells. "A pretty substantial volume of product was sold. There might have been some delays in getting the product out, but we were consolidating two plants during the year. I wouldn't expect a recurrence of the minimal delays next year."

Arborist's Arsenal: Results

The arborist has a variety of weapons in his arsenal against the gypsy moth. Most agree that a well-timed, well-planned, integrated pest management program (IPM) is necessary. "The gypsy moth should be dealt with as part of an overall biological problem and not as if there is one solution to stamp them out in one fell swoop," says Charles Roth, chief educator and naturalist of the Massachusetts Audubon Society.

Nevertheless, different arborists rely on different weapons as their mainstay in the fight against the gypsy moth.

The most popular method still remains spraying, with arborists mentioning Sevin as the pesticide used most often. Bruce Walgren, Jr., director of operations for Walgren Tree Experts in West Hartford, CT, says that his firm uses a two spray approach. They spray early with Sevimol, a Sevin with an additional "sticky" substance to

keep the chemical on the tree. They then do a second application of malathion and Sevin for good knockdown. "Sevin did a super job," says Walgren. "We achieved very good control. Approximately 97 percent of our customers were satisfied. There were not many complaints, especially for the volume of business we did." Robert Mullane of Alpine Tree Care prefers a combination of Sevin, malathion and methoxychlor. Others, like Carl Bosenberg, used Sevin by itself.

Sevin was neither universally used nor was it universally acclaimed. Eric Haupt uses methoxychlor "almost exclusively. It's very effective from a money standpoint and a control standpoint."

Okay to Spray?

Some ecologists object to the use of Sevin because it is "broad spectrum like so many of our pesticides," according to Dr. Dick Plunkett, a staff ecologist with the National Audubon Society in New York. "A broad spectrum pesticide affects the natural controls—parasites and predators. Whatever controls we destroy increases the intensity of the next outburst."

Plunkett points to the adverse effect of Sevin on honeybees as but one example. "Natural pollination is of great importance to fruit crops. The commercial beekeeper is warned to keep away for a week after Sevin is sprayed."

Others maintain that Sevin is less than beneficial to humans and animals in the area being sprayed. Sufficient doubts exist, they claim, but the pesticide still remains on the list of accepted chemicals.

Roy Lockett of Union Carbide is unconvinced. The Environmental Protection Agency just completed a four year investigation of Sevin. "They went through all our files, and through information from outside laboratories," Lockett explains. "They found that Sevin poses no threat to humans or animals—they gave it a clean bill of health."

Few people on either side insist on taking their case to its extreme. Plunkett says the Audubon Society approves of the United States Department of Agriculture's program which advocates an IPM scheme to combat the gypsy moth. Plunkett also says that he would not object to the "use of chemical insecticides for extreme conditions. What I do object to is aerial spraying near people."

Many arborists who are confident that Sevin and other pesticides are not harmful to humans, are still wary of spraying wantonly. Carl Bosenberg "firmly believes that the fewer chemicals we have in use, the better off we are in the long run. If we could control the gypsy moths without chemicals we would be very happy. It's not that Sevin is harmful, but we would do any-

Beautified lawns. Satisfied customers.

RYAN
REN-O-THIN

RYAN LAWNAIRE III

RYAN THIN-N-THATCH

Thins . . . weeds . . . opens soil for seeds.

That's results from Ryan.

Whether you use your aerators and power rakes in your turf maintenance business, or you rent them to first-time users, you're looking for the same day-in, day-out performance.

You get it with quality Ryan® Turf-Care Equipment. Because every piece of Ryan equipment has its roots in the golf course industry, where the name Ryan has stood for quality since 1948. And we build the same precision and accuracy into our lawn aerators and power rakes.

The self-propelled **Lawnaire® III**, for example, makes it easy to aerate like a pro. Just fill the ballast drum with water to add up to 50 pounds of weight, and get up to 2½" of penetration. The 19-inch width of the Lawnaire III Aerator helps you make quick work of big lawns, with 30 spoon tines penetrating the turf every 7 inches. Transporting the Lawnaire III is quick and easy, too, with the optional Tote Trailer.

The gutsy 7-hp Ryan **Ren-O-Thin® IV** and economical 5-hp **Ren-O-Thin III** Power Rakes handle those big dethatching jobs with a wide 18" swath.

Both feature a floating front axle and micro-screw height adjustment for setting the proper dethatching depth you need. And a choice of three optional blade reels let you, or your customers, dethatch according to turf conditions.

The easy-to-operate 3-hp Ryan **Thin-N-Thatch™** makes dethatching less of a chore. It has a 15" cutting width and fold-down handle for easy transportation. Combine that with easily adjustable cutting heights and durable carbon steel flail blades and you've got a great rental machine.

With Ryan lawn care equipment, you get more for your money—and your customers do, too. To discover how easy it is to get professional results with Ryan, contact your local Ryan dealer.

Gypsy Moth from page 32

thing to avoid spraying into the atmosphere. We like to soft pedal the use of chemicals."

Eric Haupt agrees. "We view spraying as a necessary evil. We won't take advantage of the concern of the public to scare them into additional spraying. We won't sign them up for 30 years. There's too much indiscriminate use of pesticides."

Charles Roth was particularly disturbed about indiscriminate spraying in reaction to the gypsy moth attack. "There's an awful lot of garbage being sprayed around. People are spraying chlorox, kerosene, anything, into the atmosphere."

The attitude of the general public toward spraying was, as usual, mixed. Bosenberg found that this year "people were so glad to see us, it was fun to spray. Last year we had lots of hassles; this year anybody who could spray was accepted. People's trees were being chewed up, they were willing to accept anything. If your neighbor's tree is chewed up you feel sorry; if yours is chewed up you get excited."

Walt Dages of Bartlett Tree Expert Company says that when the company's helicopter landed for a break or to check an address "people started running up to the helicopter and asking to be sprayed."

Attitudes toward spraying seem to be determined by how desperate the individual is for relief. Tom Wolf, a forester with the New York State Department of Environmental Conservation, discovered that in New York City. The DEC was going to spray 800 acres in the Bronx and Staten Island with Dylox. In Staten Island, where homeowners were suffering, a public protest was made and the environmentalists were "hooted down." In the Bronx, the outbreak was localized in Van Cortland Park. DEC officials were besieged with protests and petitions from community groups, assemblymen and state senators. The city was forced to drop the program.

Wolf discovered that you can't please everybody. "Before the gypsy moths start chewing, people yell 'don't spray, you'll poison children and dogs.' After they start chewing, people yell, 'how come they didn't do anything?'"

Alternatives: Bt and NPV

Given the widespread discomfort with spraying, other alternatives were examined. Many people advocate *Bacillus thuringiensis* (Bt), a spore-forming bacteria, as a safer, but equally effective, alternative. Charles Roth recommends Bt. "There's less of a biological impact, it's better in the long run" and knocks out the gypsy moth, according to Roth.

Last year, Alpine Tree Care used a considerable amount of Bt. "This year, says Robert Mullane, "we used it on a limited scale. We got terrible results. The gypsy moth lays eggs over a six week period, from May 1 to June 20. It takes Bt

a week to become effective. It works for the next week, but it couldn't control them the next month."

Roth grants that Bt "is more expensive and needs to be applied at proper times." However, its major advantage, "that it is only effective with caterpillars of the lepidoptera family," outweighs its additional cost and inconvenience.

Another highly touted alternative that only affects the gypsy moth is a gypsy moth virus, nucleopolyhedrosis (NPV), trade named Gypchek. It is also known as "wilt disease" because when killed by the disease, the gypsy moth hangs in an inverted "v." The advantages of the virus, which occurs naturally in high gypsy moth populations, is that it is specific to gypsy moth larvae and has "no effect whatever on anything else in the environment," according to Tom Wolf.

The disadvantage of the virus, Wolf notes, is that two applications, between five and ten days apart during the early instars, are required in order to be effective. Also, it takes one to two weeks to start killing the moth. Once the disease starts, if it has been properly applied, Wolf says you can expect a 75 percent mortality rate.

"Wilt disease" has been synthetically reproduced, but it is not yet commercially available. One of the reasons is that the virus is specific to the gypsy moth. The episodic nature of the gypsy moth makes the synthetic virus a less than profitable investment.

Stuart Aimsforth of Abbot Laboratories in North Chicago says that NPV is a "dead issue. Its control is as good as Bt, rarely if ever better than Bt. Bt has certain advantages over the gypsy moth virus and has some safety profits as well."

Injections and Pheromones

For one who does not wish to use biological agents or resort to spraying, injections are also possible. Injections of Bidrin, made at the base of the tree, become effective within 24 hours and sometimes as early as six hours, according to Dr. Arthur Costonis, president of Systemics Inc., in Massachusetts. Injections to the root flare send the poison throughout the tree. Only insects which eat the leaves are affected. "The poison stays six times as long as a spray—30 days conservatively, and up to 60 days. A minimal amount is used, only target trees are treated, it's non-blowing and the concentration found in gypsy moth larvae is almost non-detectable. If you compare it cost-wise, biologically-wise, efficacy-wise, as far as I'm concerned there are no disadvantages," says Costonis.

Costonis injected the street trees in Babylon, Long Island. "We did 30-40 trees at a time," says Costonis. Costonis estimates that it takes approximately 20 minutes, from the time you leave the truck until you pick up the last capsule, to inject

**Pennwalt—
A commitment
to clean water
for over 20 years.**

**Put it to work
for your customers.**

In more than two decades of commercial usage, Pennwalt aquatic herbicides have shown their effectiveness and compatibility with the environment, especially the ecological support systems of lakes, ponds, and streams.

Pennwalt aquatic herbicides kill water weeds and algae on contact*. And because these herbicides are based on a non-persistent compound—endothall—there is no bioaccumulation in the aquatic environment. Endothall breaks down in two weeks or less into carbohydrates—common constituents of plant life.

Pennwalt's Aquathol® K features a margin of safety to fish when properly applied; with little adverse effect on fish food organisms or the general ecosystem. Swimming can be permitted just 24 hours after treatment with Aquathol K or Aquathol Granular.

To fill all your needs, Pennwalt aquatic herbicides come in a variety of forms: ■ AQUATHOL® K Herbicide—in convenient liquid and granular forms. ■ HYDROTHOL® Herbicide/Algicide—in liquid and granular forms. ■ HYDOUT® Herbicide/Algicide**—pellet form.

Clean up your customers' water weed problems with the products that are backed by years of experience—Pennwalt aquatic herbicides. Interested in serving the aquatics business as an applicator? Moving. Splitting. Cutting. Chipping.

Face it. If you run a business, you know that people cost money. They have to be paid. So, when someone comes up with a whole line of machines that need just one man to operate, you can start counting the savings.

If you deal with wood, trees, bushes, any landscaping or nursery work, you ought to deal with Vermeer. Vermeer Tree Spades can remove, transport and transplant trees up to 8 inches in diameter.

With one man doing the work. In minutes. Vermeer's new low-cost LS-150 Log Splitter turns out firewood up to 32 inches long. In seconds. The Vermeer Stump Cutter makes an ugly stump a smooth, workable piece of ground. In minutes. And Vermeer Brush Chippers make short work of fallen limbs and branches for maintenance crews.

One man and a Vermeer. It makes sense, because people cost money.

VERMEER TREE SPADES: Transplant and package 2 to 8-inch diameter trees.
VERMEER LOG SPLITTERS. Three different models, split firewood up to 32 inches long.
VERMEER STUMP CUTTERS. Four different models cut out largest stumps in minutes.
VERMEER BRUSH CHIPPERS. Powered by big 76 h.p. Chrysler engine.

Why Use AQUASHADE?

For all seasons

For controlling unwanted aquatic plant growth

For beautifying, as it colors the water blue

For economy, as it is long lasting

For non-toxicity, as it is harmless to fish, wildlife, and humans

For easy application—just pour in

For an alternative to copper compounds

EPA - REGISTERED

Hahn SPRAY-PRO

**Compact Self-Propelled Sprayer
High Flotation Protects Turf.
Optional Spreader, Utility Bed, Hand Spray**

For golf greens, grounds, lawn care and Ag uses. Fast, precision spraying of herbicides, insecticides, and liquid fertilizer.

Compact size for maneuverability, yet it has 160 gal. polytank with patented Hahn jet agitation. 15-ft. 3-section folding boom for 16½ ft. coverage. Use all 3 sections or individually.

Centrifugal pump: 100 PSI max., 55 gpm max. Optional Hand Gun for trees, shrubs or brush control.

16 h.p. Kohler cast iron engine. Three-speed transmission. Hydraulic brakes. Automotive type steering.

HAND GUN and 25 ft. hose permits spraying trees and shrubs on the move. Optional.

BIG HIGH FLOTATION TIRES

Reduce compaction. Drive on golf greens safely. About half the PSI of other utility trucks and sprayers.

4-WHEEL STABILITY

Low center of gravity. For more stability and safety.

FAST, WIDE COVERAGE

STEEL UTILITY BED Optional.

Converts sprayer to Utility Truck. Complete with sides and drop tailgate.

CONVERTS TO PRECISION SPREADER

Pendulum action spreader for more accurate pattern than any other method. Spreads 1000 lbs. of sand for top dressing over a 3000 sq. ft. area in two minutes — 12 ft. swath. Also spreads fertilizer, seed, or lime — 20 to 45 ft. swath. Powered by auxiliary drive from vehicle engine. Capacity — 1000 lbs. of sand or 700 lbs. of fertilizer.

DEALERSHIPS AVAILABLE IN SOME AREAS. TELEPHONE (812) 428-2025

CONCENTRATE ON RAISING TURF.

NOT CASH.

You need a lot of equipment for effective turf management. And we lease it all. Mowers, spreaders, sprayers, tractors and aerators, just to name a few.

Quite simply, we specialize in leasing this equipment so you can keep your credit

open for other operating expenses and conserve your capital.

Leasing. It's the smart way to grow, and a real hedge against inflation. Find out more by calling us at 800-547-4905. The call's on us.

It's a snap to turn a Cushman Turf-Truckster

into a whole fleet of useful machines.

On its own, the Turf-Truckster® is an impressive way to move people, tools and equipment quickly and economically. And, as the workhorse of the Cushman® Turf-Care System, it's without equal.

Both the 3- and 4-wheel Turf-Truckster vehicles are powered by a rugged, air-cooled 18-hp OMC engine. And recent improvements help this year's Turf-Truckster deliver a 1,500 pound payload capacity.

What's more, in a matter of minutes, the Cushman pin-disconnect system and wide range of optional attachments can turn the Turf-Truckster into any of the specialty machines on the next page. All interchangeable. All engineered specifically for the turf-care professional.

No bolts. No hitching. No more jerryrigged trial-and-error attachments. Imagine how much time that convenience, and these accessories, could save you in the year ahead.

**Cushman's
pin-disconnect system
makes equipment attachment a snap.**

GREENSAVER® AERATOR

The Greensaver aerates greens, tees and other turf areas up to 10 times faster than walk-type units. Select 1/2" or 3/8" coring tines (both coring drums will collect cores as you aerate) or slicing tines to match your turf.

SHORT BOX & FLATBED BOX

Your Turf-Truckster becomes a flatbed hauler with just two pull pins in place. Bolt on the optional side panels and tailgate to the flatbed, and you have a 1,500 pound capacity* box that can be dumped manually or hydraulically.

TOP DRESSER

Compared to self-powered or walk-type top dressers, this unit quickly pays for itself in saved manhours. A rubber fabric moving bed and rotating brush are matched to the vehicle's ground speed governor for an evenly spread 31 1/2" swath. The clutch control, to engage spreader, can be operated from the driver's seat. And the hopper holds up to 1,000 pounds of material.

SPREADER/SEEDER

Mounted on the optional Short Box or Flatbed/Box, its cyclone action broadcasts as much as 300 pounds of seed, fertilizer or other material over a 40' wide area. The Spreader/Seeder is powered by the Turf-Truckster vehicle's optional PTO with extension shaft. And the controls are operated from the driver's seat.

SPRAYER

With optional 15' boom and handgun, this attachment is ideal for spraying greens, trees, bushes or roughs quickly and accurately. Powered by the Turf-Truckster vehicle's optional PTO, and equipped with ground speed governor, calibration is easy and thorough. The 100-gallon tank means fewer refilling stops.

QUICK AERATOR

With its 46" swath, this attachment earns its name by finishing big aerating jobs fast. By hydraulically lifting it into transport position from the driver's seat,** you can move quickly from job to job, too. Choose from three tine styles, slicing, coring (2 sizes) and open spoon.

POWER CONVERTER

The Cushman Power Converter is an inexpensive way to turn your Turf-Truckster into a mobile power plant for electric tools, floodlights... anything with a universal motor that draws up to 12 amperes at 120 volts DC. So instead of bringing small repair jobs back to the shop, your crew can handle them in the field.

To find out more about how the Cushman Turf-Care System can make your work force more productive, ask your Cushman Turf Dealer for an on-turf demonstration soon. For the name of your nearest dealer, call Cushman Information at 402-435-7208.

*Rating for vehicle equipped with 9.50-8 rear tires.

**Optional hydraulic system and dump set required.

DO YOU WANT TO SELL MORE LIVING PLANTS?

Every alert businessman looks for ways to increase sales. You're no exception.

You may have sold everything you could get your hands on this year — but there are all sorts of pressures now (and more on the way) that may force people to think about reducing the dollars they spend on our living plants and related products and services.

All of us in the business of growing living plants and all of us in the business of selling them have to get together in a united effort to sell more with greater profitability.

All of us need the Nursery Marketing Council.

As wholesale growers or suppliers, we all must show a voluntary NMC contribution on our invoices amounting to 1/4th of 1% of the gross sale. As retailers, we must pay that fractional voluntary assessment — then the growers or suppliers match the contribution and send the combined total to NMC.

Need more information?
Write us or phone.

DON'T CUT OUT QUALITY.

DO IT RIGHT,
WITH
STANLEY.

Quality, by our standard, is something which goes a lot further than making tools. To Stanley, it means: a full line of tree trimmers for every job; the best warranty in the business; complete parts backup; and distributors to help you anywhere in the country. It's also the efficiency, safety and dependability of hydraulic power. We don't trim on anything so that you're able to do your trimming faster. Stanley Hydraulic Tools: 3810 S.E. Naef Road, Milwaukie, Oregon 97222. Phone (503) 659-5660. Telex 360771. Write or call.

Advances in Turfgrass Pathology

published by HARCOURT BRACE JOVANOVIICH PUBLICATIONS in cooperation with Dr. B. G. Joyner, Dr. P. O. Larsen and Chemlawn Corporation

only \$27.95* hardcover
only \$18.95* paperback

Information available nowhere else in one handy volume!

A compilation of more than 23 reports and discussions by the nation's leading pathology authorities.

This one-of-a-kind volume extensively explores the diseases of turfgrasses and what the industry can do to combat these diseases. One of the most comprehensive, timely books available on turfgrass problems—sure to become an industry reference “standard.”

CHAPTERS INCLUDE . . . Turfgrass Diseases: Past, Present, Future . . . Cool Versus Warm Season Pythium Blight and Other Related Pythium Problems . . . Snow Molds of Turfgrasses: Identification, Biology and Control . . . Fairy Rings: Biology, Antagonism and Possible New Control Methods . . . Leaf Spot of Kentucky Bluegrass in Minnesota . . . Initial and Field Fungicide Screening from a Chemical Company Viewpoint . . . Turfgrass Disease Resistance—Selection, Development and Use . . . PLUS MUCH MORE!

**ADVANCES IN
TURFGRASS
PATHOLOGY—
“Must” reading
for anyone involved
in the turfgrass
field.**

SOLO jetpak has the guts for tough spraying jobs

SOLO's JETPAK has proven that it can handle the new powerful agrichemicals, including herbicides. And, it's being used more and more by industry for cleaning, sanitizing, and pest control.

JETPAK has the guts to do the job! Chemicals come in contact only with JETPAK's durable, inert, corrosive-resistant plastic components.

IMPORTANT: To make it easier to conform to tough new no-drift spraying rules, use optional spray drift guard, pressure gauge, or pressure-limiting valve. You can maintain any spray pressure uniformly from 0-90 lb.

JETPAK has human-engineered contour, fatigue-free manual pumping system. Weighs only 9½ lb empty. See-through tank holds 4 gallons. Wide choice of nozzles.

Write for free brochure or ask your dealer for SOLO JETPAK.

SOLO INCORPORATED, 5100 Chestnut Avenue, Newport News, VA 23605
Canada: Box 464, Burlington, Ont. L7R 3Y3

THE GRASS IS GREENER ON THE ENKAMAT® SIDE.

Enkamat® webbing is a 3-dimensional nylon turf reinforcer. Placed just below the surface, it will keep turfgrass and/or appropriate vegetation in place, protect it against tearing, and in most cases prolong the playing season.

The Rose Bowl installed 20,000 square feet in March 1980, and reported excellent results, even after an extensive soccer season. The Wellington Landing Strip and numerous high schools also installed Enkamat webbing with great success.

Enkamat helps scarred turfgrass heal itself by protecting against compaction and divoting, promoting a strong root system. Because Enkamat provides a more resilient footing than both unprotected grass and topical synthetic matting, it tends to reduce the types of injuries suffered on artificial turf.

Enkamat works. In the stadiums of the Orange Bowl and New Mexico State. On the tees and greens and cartpaths of this country's more prestigious golf courses. On athletic fields, polo grounds, parks and soccer fields.

You'll call it the greening of America. But the real name is Enkamat.

For more information, contact Enkamat Department, American Enka Co., Enka, NC 28728 (704) 667-7713.

ENKAMAT®
WEBBING BY ENKA

Keeping America green.

The City That Works Works With Woods

There's a lot of grass to mow in the Windy City, and Chicago's Park District uses rugged Woods mowers to help them cover a lot of ground.

But Woods mowers aren't designed just for large areas. In fact, we make mowers that cut swaths from 3 1/2 feet all the way up to 20 feet. Plus, we offer more rearmount and undermount models than any other manufacturer of tractor-powered mowers. New tractors or old, domestic or imported, Woods has a mower to fit the tractor and the job.

Send for complete specifications on the dependable line of Woods mowers today.

for 34 years the name to remember for quality and performance

EXCEL HUSTLER

Total maneuverability and year-round performance cut operating costs.

An EXCEL HUSTLER is a machine for all seasons. It is designed for year-round use, making it the investment that pays off in lower operating costs, superior performance and time savings.

EXCEL'S exclusive, dual-hydrostatic system powers both drive wheels independently. Twin levers, one actuating each drive wheel, control forward, reverse, ground speed, turning and braking action.

Compare this total maneuverability with the competition to see how operating costs can be reduced...A HUSTLER has **no** hard-to-turn steering wheels, **no** foot pedals, **never** a loss of steering control and **low** daily maintenance requirements (only 2 tractor grease fittings). Less operator effort is spent maneuvering around obstacles **and** on daily servicing, so productivity increases.

Attachments include the new 72" 3-way offset mower deck that mulches, discharges side or rear, a 60" flail mower, 72" heavy-duty deck, edger, 54" snow thrower, 60" V-blade, 60" dozer blade, 60" rotary broom, utility scoop, ROPS, cab and more. Call toll free 1-800-835-3260, or write for information.

The EXCEL HUSTLER Production Crew...Models 275 (20 or 23 hp), 295 (25 hp) and 305 D (27.5 hp diesel).

The choice of the Pros.

NOW YOU CAN CHANGE FROM FORWARD TO REVERSE WITHOUT TOUCHING THE GEARSHIFT.

It's not as impossible as it sounds. Not with the help of a manual shuttle shift.

Which is exactly what our two new tractors feature.

It means you can move from forward to an equivalent reverse gear by simply disengaging the clutch, stopping the tractor, and then pulling the

© 1981 Kubota Tractor Corporation

shuttle lever down. That's it.

Up there on the left is the L235, ideal for all grounds maintenance chores.

While hard at work down on the farm is the L275.

Both tractors have water-cooled diesel engines.

The L235 gives you 23.5 hp*, while the L275 with live rear

*Gross engine hp manufacturer's estimate.

PTO produces 27.5 hp*

And both tractors have standard features that include rear wet disc brakes, a 3-point Category I hitch and a 7.4 gallon fuel tank.

Whether you have 2- or 4-wheel drive, power steering is up to you.

Any of the dealers in our nationwide sales and service network will certainly help you decide.

So why not visit one of them?

Or for more information, write to us at Kubota Tractor Corporation, Communications Department, P.O. Box 7020, Compton, California 90224.

With new products like the L235 and the L275, you'll agree we're a company that's going forwards.

 **KUBOTA**
We're looking for work.

Ryegrass

Now Has An Added Dimension Emergence of the highly successful, exceptionally handsome turf-type ryegrasses lends further credence to the historic claim that "ryegrass is the world's most widely used grass." For years annual and perennial ryegrass have found a home where there is need for a fast-germinating grass which quickly forms a strong root system and forms a durable, inexpensive, easy-to-maintain turf.

Now added to the product line are the finer-bladed turf-type ryegrasses which rival the best of the fescues, bentgrasses and bluegrasses for turf quality.

They not only mix well with these varieties, the ryegrasses germinate in a matter of 7-10 days, mow beautifully and never need pampering.

That's why ryegrass — now more than ever before — is called "the versatile grass."

Ryegrass is truly the all-round performer.

Oregon Ryegrass Commission, Salem, Oregon

DURSBAN KEEPS RUNNING STRONG. HELPS KEEP BUGS FROM COMING BACK BEFORE YOU DO.

Long-lasting DURSBAN* brand insecticide is good insurance for your customer list. It can last up to 8 weeks—not just 3 or 4.

If the insects get back to your customer before you do, it's goodbye good customer.

That's why you'll want the insecticide that gives long-lasting protection to your business reputation! DURSBAN brand insecticide.

Whether you use the 2E or the double-strength 4E concentrations, you get longer residual control than with any other leading turf insecticide. And best of all, DURSBAN insecticides even cost less to use than many others.

So for sod webworms, chinch bugs, billbugs, ants, grubs—you name it—why not use the insecticides that keep running strong. And long. Get DURSBAN brand insecticides.

Just be sure to read and follow all label directions and precautions. Agricultural Products Department, Midland, Michigan 48640.

The Professional's Choice

Mow smoothly and pick up clippings in one pass! The rugged, versatile Lawn Genie thatches lawns, verti-cuts greens, tees and fairways, sweeps leaves and mows through tall weeds. Hopper empties easily from tractor seat. Change to thatching knives or replace blades in seconds with M-C's patented spring-loaded hangers! There is a tough Lawn Genie model sized for any job in your choice of engine-driven or PTO, lift-type or pull-type and cutting widths of 36", 48", 60" and 72". It's the three season pick-up mower that thatches, mows and sweeps.

Change blades to thatching knives, or combination of both styles, in seconds.

THE GT-7. ITS CARRYING CAPACITY IS NO EMPTY CLAIM.

It has two seats and two headlights instead of one. It's easier to service, has undentable fenders and a diamond steel rear bumper.

You can buy it with a full line-up of accessories for aerating, seeding and spreading, top dressing or spraying.

One more thing. It sells for about the same price as the leading competitor. We don't mean to unload on them, but we just had to say some of these

things before you went ahead and bought their machine before trying our GT-7.

For a demonstration on your course, just call your E-Z-GO Branch Office or Distributor. They're in the Yellow Pages. Or call us at (612) 542-0516.

IT'S OFFICIAL... IT TAKES LESS KOBAN® 30 FUNGICIDE TO PREVENT PYTHIUM.

AN 30 to the spray tank with the agi
. Disperse 2 to 4½ oz. of KOBAN 30
for each 1000 sq. ft. of turf to be t
/1000 sq. ft. of turf to be t
to be t /1000 sq. ft. f
urf area with a

There's a new, approved label rate for Mallinckrodt's KOBAN 30 fungicide. On the basis of Mallinckrodt field research and the working practices of many golf course superintendents, the minimum label recommendation has been lowered to two ounces of KOBAN 30 to five gallons of water per 1000 sq. ft. for preventive treatment of Pythium. Now when you compare brands and prices—compare coverage. KOBAN is

effective and economical for use on fairways as well as greens and, used with the recommended amount of water, control will be improved and tip burn all but eliminated.

By every measure
this is the one
world class
Kentucky Bluegrass.

ENMUNDI

Here is a low maintenance grass that offers multiple benefits to the sod grower. Fine textured, dark green and extremely uniform, Enmundi has better overall disease resistance than any other variety of Kentucky Bluegrass available in commercial channels today.

Enmundi can be counted on to develop an abundant, tenacious root system, have "excellent" resistance to leaf spot, brown patch and rust and "very good" resistance to *fusarium* and "good" resistance to stripe smut.

To top it off, Enmundi has excellent heat, cold and drought tolerance.

Well adapted to the northern half of the U.S. and well into Canada, it is also at home southward through the transition zone.

Enmundi – it's *the one* world class Kentucky Bluegrass.

You'll profit more... on our side of the fence.

You'll profit more because Safe-T-Lawn offers you more. Quality, safety, variety and availability are some of the extras designed to move our irrigation products out of your store.

Safe-T-Lawn's superior quality control maximizes the performance of our heads and enables us to back our products with an extended warranty that no other company in the lawn irrigation industry can match.

With pop-up heads that hide from detection when not in use, Safe-T-Lawn

products prevent tripping accidents and mower damage. That means more satisfied customers for you.

And, when it comes to variety, Safe-T-Lawn offers both brass and plastic irrigation products—a new series in each material—and a product line large enough to meet any application. Plus, we keep a complete inventory of products constantly available to you through strategic warehousing and a complete distributor network.

At Safe-T-Lawn, we do it all so you'll profit more.

On our side of the fence...we're on your side.

Now, the Cushman Front Line offers a choice of decks. And a diesel.

We've taken a proven performer and made it work even harder. You already know the Front Line™ as an exceptional rotary turf mower. With the kind of common-sense engineering and durability you expect from Cushman.

Durability that comes from features like an 18 hp, air-cooled OMC gasoline engine. Single, rear-wheel steering and split, front-wheel traction assist pedals. Variable cutting heights. Hydraulic deck lift. Foot and parking brakes. Large-capacity fuel tank. Wheel-type steering, and more.

And now, optional decks, diesel power and specialized accessories make it even more productive.

In addition to the 72" mower deck, we now offer a 60" deck for smaller jobs. Both feature 12-gauge carbon steel construction, and are offset for close-up trimming.

For even greater economy and durability, the Front Line is now available with an optional water-cooled 4-cycle, 2-cylinder diesel engine.

And for year-round versatility, we've added hard-working optional accessories for the gas tractor. Like the new 60" chain-driven rotary broom. The roll-over protection structure and weatherproof cab set (also available for diesel). And the

new 48" snow thrower that can move up to 5,000 lbs. of snow per minute.

The Front Line. Tough enough to be a Cushman. Now versatile enough to pay off full time.

Call your Cushman dealer now for a demonstration. 81-CUT-3R

Bookstore

010, 015 - ADVANCES IN TURFGRASS PATHOLOGY by Dr. B. G. Joyner & Dr. P. Larsen
Leading U.S. turf pathologists report on turfgrass diseases, pythium blight, snow molds, fairy rings, leaf spot of Kentucky Bluegrass in Minnesota, initial and field fungicide screening, turfgrass disease resistance, etc. Contains new ideas on how to combat turfgrass problems. **\$27.95 hardcover, \$18.95 paperback**

110, 120 - TURF MANAGER'S HANDBOOK by Drs. William Daniel and Ray Freeborg
This specially designed manual by leading turf specialists is a comprehensive, organized approach to turfgrass science and care. An easy, on-the-job reference for planning, purchasing, hiring, construction and plant selection. **\$18.95 hardcover, \$14.95 paperback**

355 - PERSPECTIVE SKETCHES by Theodore D. Walker
A reference source of ideas, media use, styles and techniques. Grouped by subject matter. Illustrates technique for vegetation, vehicles, play equipment and recreation facilities, people, animals, etc. **\$19.50**

345 - COST DATA FOR LANDSCAPE CONSTRUCTION 1981 - Kathleen W. Kerr, Editor
An updated unit cost data reference for designers, and cost estimators. Developed to fill the tremendous need for detailed landscape construction cost data. Laid out in easy-to-use CSI format. Annual. **\$24.95**

370 - LANDSCAPE OPERATIONS: MANAGEMENT, METHODS & MATERIALS by Leroy Hannebaum
An in-depth examination that combines technical training in landscape science with methods of accounting, business management, marketing and sales. Discusses effective methods for performing lawn installations, landscape planting and maintenance. Step-by-step accounting calculations are explained in simple terms. **\$17.95**

360 - HOME LANDSCAPE by Garret Eckbo
Provides designs, examples and current innovations and refinements to older traditional designs. Covers all aspects of residential landscape planning. **\$18.95**

780 - PARK AND RECREATION MAINTENANCE by Sternoff & Warren
Preventative maintenance through planning, personnel considerations, equipment maintenance and an examination of public safety, liability and vandalism are covered. Chapters on general outdoor maintenance focusing on outdoor lighting, solid waste sanitation and maintenance of roads, parking lots and trails. **\$18.95**

790 - RECREATION PLANNING AND DESIGN by Seymour M. Gold
A comprehensive look at recreation needs for parks and how they can design the park facility for the community. Book's content can help justify construction and maintenance needs. **\$27.50**

630 - TURFGRASS: SCIENCE & CULTURE by James Beard
Comprehensive basic text and reference source used in many leading university turf programs. Includes findings of current research compiled from more than 12,000 sources. **\$23.95**

375 - SITE DESIGN AND CONSTRUCTION DETAILING by Theodore D. Walker
An introduction to the subject of site design and construction detailing. Focus is on design implementation. Discusses the nature of construction drawings. Presents the characteristics, origin and nature of construction materials. **\$24.00**

365 - PLAN GRAPHICS by Theodore D. Walker
Focuses on plans, elevations, sections and lettering. Provides many different examples to be used as guidelines in personal skill experimentation. Includes graphic techniques for site analysis and design concepts. **\$21.00**

340 - CONSTRUCTION DESIGN FOR LANDSCAPE ARCHITECTS by Albe E. Munson
Design specifications for layout, grading, drainage, structures and irrigation. Also explains mathematics of drafting. **\$24.50**

380 - MANUAL OF WOODY LANDSCAPE PLANTS by Michael Dirr
A teaching text and reference on ornamental deciduous trees, shrubs, ground cover and vines. Provides identification characteristics with ornamental and cultural features all in one volume. **\$19.00**

390,395 - PHOTOGRAPHIC MANUAL OF WOODY LANDSCAPE PLANTS by Michael Dirr
Reference encompassing photographs of plant habit and ornamental characteristics. Brief descriptions of plants with major thrust on black-and-white photos selected to accurately represent growth habit and other ornamental characteristics such as bark, fruit and flower. **\$22.00 hardcover, \$14.60 paperback**

400 - WESTERN HOME LANDSCAPING by Ken Smith, LA
Illustrations and description of western landscape plants and structures for your design idea file. Covers foolproof plants, irrigation, patios and decks, walls, pools, and shelters. **\$7.95**

Bookstore

385 - TREES FOR ARCHITECTURE AND THE LANDSCAPE by Robert L. Zion
A book of photographic tree definitions, or portraits, intended to facilitate communication between the landscape architect, the architect and the layman. **\$10.95**

665 - THE OXFORD ENCYCLOPEDIA OF TREES OF THE WORLD -
Bayard Hora, Editor
An authoritative reference describing the principal trees of the world. Includes biology and growth of trees, ecology of different types of forest, forest management, timber usage, and pest and disease control. **\$24.95**

710, 720 - SHRUB IDENTIFICATION by George Symonds
Pictorial key to identify shrubs. Contains more than 3,500 illustrations to check specimens. Popular and botanical names are given for each shrub with handy index tabs for quick reference. **\$18.00 hardcover, \$8.00 paperback**

510 - HORTUS THIRD from Cornell University
A 1,300-page concise dictionary of plants cultivated in the United States and Canada. A reference which every horticultural professional should have. **\$99.50**

530 - INTERIOR PLANTSCAPING by Richard Gaines
One of the first handbooks directed at the professional interior plantscaper. Includes design and maintenance clues for foliage. **\$28.50**

540 - INTRODUCTION TO FLORICULTURE by Roy Larson
Text is divided into two sections—one covering cut flowers, the other potted plants. Propagation, plant culture, pest control and individual considerations are given for chrysanthemums, carnations, roses, snapdragons, orchids, gladiolus, bulbous plants, azaleas, pot mums, poinsettias, Easter lilies, glesneriads, hydrangeas, cyclamen, begonias, kalanchoe and other flowering pot plants, bedding, hanging and foliage plants. **\$29.50**

Kinco Self-propelled Sickle Bar

The incredible mowing machine... cuts the heavy stuff with ease!

Model KMG-38

This superior machine cuts a 38-inch wide swath and breezes through heavy weeds, tall brush, saplings and rough grass. It's even perfect for small acreage hay fields. Super easy to operate uphill, downhill or over rough ground. Individual wheel clutches allow straight-on power plus and ease of power steering. Floating sickle knife follows ground contour without hangups. Cuts any brush or sapling that will fit within the 2" mower guards. Cuts over rocks and other objects without the danger of throwing them. Own this professional model for a cost equal to or less than competitive, commercial machines!

GRASS HOPPER

Saves Time, Labor and Fuel.

- Maneuverability with "feather touch" control puts you in full command.
- Dual hydrostatic power provides "one pass" mowing eliminating finish trim time.
- Out front mower deck for full view mowing.
- PTO drive to mower deck eliminates belts, simplifies change of accessories.
- Three h.p. sizes 12-16-18 to match your mowing needs, engineered for three mowing widths 44"-52"-61".
- Attachments to provide year round versatility.
- Vacuum Grasscatcher (available in two styles).
- Dozer Blade • Sweeper • Snowthrower

Over the long run, the smart money is on Milorganite

The synthetically produced fertilizers are OK for awhile ... for a quick spurt, but turfgrass professionals are discovering the hard way that the synthetics are not as effective over the long run as naturally organic Milorganite. Turf tires and develops a worn out look. The synthetics are OK for awhile ... for a quick spurt... but over the long run, the smart money is on Milorganite.

Naturally organic Milorganite provides all the nutrients needed for healthy strong turf... just the way you want to keep it **always**, and that's the pay-off in the long run.

Start your turf today on its way to a longer prime of life with Milorganite.

MILORGANITE
The Golf Course Choice

Milorganite does not burn and is almost impossible to over-apply.

DO NOT USE ON EDIBLE CROPS

MILWAUKEE METROPOLITAN SEWERAGE DISTRICT, 735 N. WATER ST., MILWAUKEE, WI 53202

**the grass is greener
on your side**

**with Bowie's
HYDRO-
MULCHER**

For fast, easy turf establishment—the Bowie Hydro-Mulcher is the answer. The one-step operation of a Bowie Hydro-Mulcher plants, seeds, sprigs, fertilizes, waters, sprays and mulches. And with a Bowie Hydro-Mulcher, you can seed over three acres in fifteen minutes. That saves you valuable time and money! Order the Bowie Hydro-Mulcher—you'll have the best and greenest—on your side!

The book that turns businessmen into best sellers.

Many who've read it are now reaping the rewards. Because they've found that U.S. exports are a more than \$100 billion a year business, that exporting creates both company profits and company growth, that U.S. goods have never been more competitive in international markets. Above all, they've found that, with the help available from the U.S. Commerce Department, selling overseas is no more difficult than selling at home. And this fact-filled book can prove the same to you. Write The Secretary of Commerce, U.S. Dept. of Commerce, BED 8B, Washington, D.C. 20230.

NEW
SPRAY NOZZLES
and
ACCESSORIES
From
SPRAYING SYSTEMS CO.

NEW— *QuickJet™* Nozzle Assemblies

A unique new system of quickly interchangeable self-aligning spray nozzles and spray tips. To provide choice of spray droplet size, in full cone, hollow cone and flat spray patterns. 3/4" NPT (M) inlet conn. Write for Bulletin 195.

NEW— Model 146 *DirectoValve*

For remote "on-off" control of spray nozzles and booms from operator's location. Operates on 12 VDC system. Pressure range from 0 to 65 psi. 1 1/4" NPT (F) spray line connection. Write for Data Sheet 16108.

NEW— Model 244 **Electrical Regulating Valve**

For remote pressure control in agricultural spray applications. 3/4" NPT (F) inlet and outlet conn. Operates on a 12 VDC system. Pressures to 100 psi. Write for Data Sheet 16994.

NEW— 3/4" and 1" **Nylon Liquid Strainers**

Strainer head and bowl made of reinforced Nylon material for pressures to 75 psi. Threaded bowl can be easily unscrewed by hand. Write for Data Sheet 15353.

mott Flail Mowers **HAMMER KNIFE** can cut your **TURF CARE COSTS**

Mott Flail Mowers reflect extra value through greater versatility, added production with longer trouble-free life, and safer operation.

No other mowing system is as versatile as the flail. With only one mower investment, you can trim fine lawns, shred tough weeds, mulch, renovate, dethatch and scalp. You can work any area that is smooth or rough, clean or trashy, level or steeply banked, dry or "liquid wet". And you can operate with much greater safety than with rotary mowers.

Mott Flail Mowers are built to last and can be used with most tractors. Models are available in widths from 38 to 88 inches. In combination, they will handle up to 19 foot swaths.

Contact us today and discover how the extra value of Mott Flails can pay off by cutting your turf care costs.

MOW LAWNS ■ RENOVATE ■ MULCH LEAVES ■ SHRED WEEDS

Mott Interstater Cuts 19' Swath.

ADS Drainage Tubing

It's dependably tough for your toughest turf jobs.

Flexible ADS drains your greens.

ADS helps maintain beautiful landscapes.

ADS keeps your athletic fields dry.

ADS controls water runoff in heavily trafficked areas.

Sandy soils call for ADS Drain Guard®—the nylon filter that won't block or clog.

ADS tubing—a small part of your turf care budget.

Whether you buy or sell turf care products, you want quality. That's why ADS polyethylene tubing is your best bet. For healthy soil, drainage is important. Strong and durable, ADS tubing provides years of trouble-free drainage, and helps maintain stable soil systems.

ADS is easy to install, requiring less labor and no heavy machinery. A flexible tubing, it follows ground contours and adapts to underground obstacles. And, ADS tubing won't rot, rust or break down during handling or backfilling. A full line of accessory fittings and couplings help simplify even the most challenging installations.

At a cost of just pennies per foot, ADS means quality AND value.

This season rely on ADS drainage tubing. You deserve the best.

SPECIFICATIONS

ASTM F-405, Standard Specification for Corrugated Polyethylene Tubing and Fittings. **SCS**, National Engineering Standard, Code 606. **ASTM F-667**, Standard Specification for 10", 12" and 15" Corrugated Polyethylene Tubing.

Look for the ADS green stripe

It's your sign of quality—#1 in the land.

KERB® ENDS YOUR ANNUAL BLUEGRASS BLUES.

Annual bluegrass, alias *Poa annua*, is one tough, ugly problem. It will do a number on your fairways. But not if you apply Kerb preemergence herbicide this fall. Kerb prevents this seedy character from rearing its ugly head.

Kerb wipes out germinating *Poa* before it reaches the surface.

With Kerb your fairways stay green. *Poa* can't mature so there are no seeds tracked onto greens. And you can take out cool-season overseeding grasses like rye without harming dormant Bermudagrass.

Call your local supplier today and order Kerb 50-W herbicide. You'll never have the bluegrass blues again.

Circle No. 158 on Reader Inquiry Card

Use Kerb in the fall~ Poa won't sprout at all.

TRIMEC[®]

BROADLEAF HERBICIDE

Kills: DANDELIONS KNOTWEED HENBIT
CHICKWEED PLANTAINS SPURGE
and Many Other Broadleaf Weeds
Contains: 2,4-D, MCPP and Dicamba
ONE GALLON COVERS 2-3¹/₂ ACRES.
KEEP FROM FREEZING

ACTIVE INGREDIENTS:

**Dimethylamine salt of 2,4-dichlorophenoxyacetic acid	27.56%
**Dimethylamine salt of 2-(2-methyl-4-chlorophenoxy) propionic acid	13.86%
***Dimethylamine salt of Dicamba (2,4-dichloro-pyrimic acid)	2.78%
INERT INGREDIENTS	56.78%
Total	100.00%

*2,4-Dichlorophenoxyacetic acid equivalent 0.22 pounds per gallon or 22.50%
**2-(2-methyl-4-chlorophenoxy) propionic acid equivalent 1.1 pounds per gallon or 11.46%
***2,4-dichloro-pyrimic acid equivalent 0.22 pounds per gallon or 2.29%

CAUTION: Keep Out of Reach of Children
See Back Panel for Additional Cautions

Fall is TRIMEC[®] time ...

TURF HERBICIDE

Any dandelion that is going to bloom next spring can be killed this fall with Trimec.[®]

...And by taking advantage of Trimec's unmatched power this fall, you can improve the quality of your turf, reduce your costs, and enjoy life more next year.

Of course you know that dandelions and other fall-germinating weeds that thrive in the spring — such as Henbit, Black Medic, Mouse Ear Chickweed, Buckhorn Plantain, Broadleaf Plantain, and Thistle — are alive and growing the preceding fall. And you also know that, because of photoperiodism, temperatures and plant stage of maturity, killing such a wide range of weeds in the fall is quite different from killing dandelions in the spring.

So different, in fact, that in the past when turfmen had to rely on old-fashioned herbicides, most of them simply gave up on attempting fall weed control.

But the advent of Trimec has changed all that, and today thousands of professional turf managers are enjoying the many advantages of fall weed control.

Why Trimec is effective in the fall

Characteristically, fall-germinating weeds that infest manicured turf have been blown in, and germinate after the equinox when fall rains begin. Because of photoperiodism, they grow very slowly and old-fashioned herbicides just don't have a broad enough spectrum and synergistic power to kill them in the cool temperatures of fall.

But Trimec is not like other herbicides. Trimec is a patented

herbicide manufactured by PBI/GORDON Corporation. Three chemicals: 2,4-Dichlorophenoxy acetic acid, 2-methyl-4-chlorophenoxy propionic acid, and 3,6-Dichloro-o-anisic acid are all reacted as acids, under controlled laboratory conditions, to form the Dimethylamine salt of Trimec. The resulting Trimec product has unparalleled strength in weeds, caused by the synergism that occurs from uniting the three acids.

And thus it is that Trimec is able to wipe out these fall-germinating

Only Trimec has all these advantages:

- Controls the widest range of broadleaf weeds.
- Gets hard-to-kill species with one treatment.
- Wide safety margin for lawn grasses and ornamentals.
- Minimum hazard from root absorption.
- No vapor action after application.
- Effective weed control in a wide range of temperatures.
- Unique formula overcomes water-hardness problems.
- Treated areas may be reseeded within two weeks.
- Non-flammable and non-corrosive in use.
- Stable several years above 32°F.
- Biodegradeable; friendly to the environment.

weeds. Even when temperatures fall below 50 degrees, or even after a freeze, Trimec will translocate throughout the root system, resulting in total kill.

The advantages of fall weed control

In the fall, your sprays will encounter less wind, rain and mud. And in the fall the translocation of the Trimec to roots of the weeds is enhanced. Ornamentals, going dormant, are less prone to drift damage. And, with mowing finished, you have more time in the fall than in the spring.

But the really good news happens the following spring when you don't have to drop everything to wipe out a bunch of embarrassing dandelions or other early spring weeds.

A test is convincing

The number of professional turfmen who now spray in the fall with Trimec has increased dramatically in recent years. If you are not among their numbers, we urge you to try spraying with Trimec this fall... at least on a test area where you can observe the results next year.

Talk to your Gordon distributor.

This magazine gives you good reading, good writing and good arithmetic.

We present the information in our articles clearly, accurately and objectively. That's good writing. Which means good reading.

We present the information in our circulation statement clearly, accurately and objectively. That's good arithmetic.

BPA (Business Publications Audit of Circulation, Inc.) helps us provide precise and reliable information to both advertisers and readers.

An independent, not-for-profit organization, BPA audits our circulation list once a year to make sure it's correct and up to date. The audit verifies your name, your company, your industry and your job title.

This information enables our advertisers to determine if they are reaching the right people in the right place with the right message.

The audit also benefits you. Because the more a publication and its advertisers know about you, the better they can provide you with articles and advertisements that meet your information needs.

BPA. For readers it stands for meaningful information. For advertisers it stands for meaningful readers. Business Publications Audit of Circulation, Inc.
360 Park Ave. So., New York, NY 10010.

We make sure you get what you pay for.

**This is quality
Sulphur Coated Urea
from C-I-L.
It is the prime
ingredient in
outstanding blended
fertilizers from
major manufacturers
from coast-to-coast.**

You can recognize it
by how it looks
and how it grows grass.

**Try it
and let your grass be the judge.**

Quality S.C.U. (32-0-0) from C-I-L
is a proven source of
slow release nitrogen, formulated
to feed turf the way it should
be fed... daily.

Telephone 519-672-9220

Professional Turf Products
A division of C-I-L CHEMICALS, INC.

**When
Others
Won't...**

the "Piggyback" Will!

Versatile Material Handler

Princeton's mighty "Piggyback" is the perfect low cost, heavy-duty material handler for all your industrial or agricultural needs. It gets its name from the way it rides suspended behind your truck to and from the job...never needing a trailer or taking up valuable load space. The "Piggyback" is light...strong...fast...durable...and completely stable on the job!

- Will lift and load up to 4500 lbs...yet weighs only 3500 lbs.

- Navigates curbs, logs, and other normal loading area obstructions with ease.

- Powerfully trudges through gravel, sand and mud...but floats over normal soil or sod.

- Turns quickly in its own length.

- Strong and safe, operating on steep grades.

- Powerful, but economical diesel engine provides superior power for all adverse operating conditions. (30-50 hp available.)

For further information or demonstration, write or call collect for the dealer in your area. Dealer/Distributor inquiries invited.

The "New Concept" People

955 West Walnut Street, Canal Winchester, Ohio 43110

Circle No. 156 on Reader Inquiry Card

"Piggyback" loaded for transport

Added Versatility with Quick-Mount Options!

Large capacity, hydraulic or mechanical scoop

Hydraulic hole digger (6" to 36" diameter)

Gypsy Moth from page 34

an average oak tree 80 feet tall and 24 inches in diameter.

If policed properly, no danger to humans or animals exists. Costonis warns that if not policed properly, that is, if the capsules are not supervised while they are in the ground and removed before the applicators leave, you're "asking for a hell of a problem." Once the chemical with a concentration of 80 percent is in the tree, the danger of poisoning is minimal. "When seven or eight milliliters are put into trees which flush through 150-200 gallons a day, you get a dilution factor. An insignificant amount remains in the trees. You'd have to eat an awful lot of leaves to become ill," Costonis claims. "If the rules are followed, you can get 75-80 percent foliage protection."

Some experts fear that the injury the tree sustains during the injection may make the cure worse than the disease. Dr. Alex Shigo, chief scientist of the USDA's Forest Service Northeastern Forest Experiment Station in Durham, NH, states that "injections properly done can be beneficial; injections improperly done can be harmful." Shigo says that often holes are too deep, too wide and too far from the base of the tree. Too much pressure is also applied. "Don't go beyond the current growth ring," Shigo warns. "We have to trade off the injury to the tree with the benefits it gets. The process of injection will be with us; it's our responsibility to find ways to inject for the benefit of the tree and not to the detriment of the tree."

Costonis concurs and draws an analogy with a human doctor. "If you shoot yourself up with a compound, you get hurt. If a doctor does it the risk is minimal."

Arborists throughout the Northeast had positive results with their sporadic usage of injections. Ellis Allen of Allen Tree Experts, Inc., in Medfield, MA, summed up the feelings of many when he said although injections are effective they "won't take the place of sprays. They're too slow. Two men can't inject as quickly as they can spray. It's good for use on isolated trees or for people leery about spraying."

Sex pheromones were also used with mixed results. The scent given off confuses the male gypsy moth in order to decrease mating. It can also lure gypsies into traps. The expense, the incredible number of eggs spawned from one successful male and the fact that the traps draw the moths onto your property before they are caught prove that pheromones, like most weapons against the gypsy moth, are not a panacea.

Moth is a Nuisance

In late June, the gypsy moth stops chomping on trees and starts to pupate. From then on, the gypsy moths are more of a nuisance than any-

Healthy Turf Next Spring Starts With IBDU This Fall

Sure, there's more to maintaining quality, disease-free turfgrass than a couple of fertilizer applications. But turfgrass scientists across the country are reporting that a fall application of IBDU (31-0-0) can produce turfgrass with better root development and less disease problems.

Dormant turfgrass plants continue to produce rhizomes and roots, even though vertical growth has stopped. During this time nitrogen should be made available to the turfgrass plant as carbohydrates are naturally accumulating. Thus, scientists say, the optimum timing for nitrogen applications is during the fall and early winter months.

IBDU (31-0-0) is ideally suited for dormant nitrogen fertilization. Because of its slow release characteris-

tics based on hydrolysis, IBDU releases nitrogen later in the fall and earlier in the spring promoting better rhizome and root growth. A fall fertilizer program using IBDU should produce healthier more vigorous turfgrass plants and reduce the severity of several turfgrass diseases.

Remember. Healthy turf next spring starts with IBDU this fall.

INTRODUCING
PUR·R·R·FORMANCE

The new WhisperGlide™. Quiet, tough and efficient.

Announcing a dramatic new standard of dependability in gas powered cars. We call it pur-r-r-ormance. The new Harley-Davidson WhisperGlide is:

- newly designed to provide the reliability you demand and, for the rider, the quietest operation in the industry.
- built around a unique engine that delivers unparalleled fuel economy and simplified servicing.

The WhisperGlide™ story is very hush-hush.

Our tests prove this is the quietest gas car for the rider in the industry. In fact, when compared to our closest competitor, WhisperGlide was 2.5 decibels quieter for the rider. Why so quiet? Five new features—full engine speed at only 2800 rpm, a finely tuned exhaust system, an exclusive new transmission, a redesigned combustion chamber and a new piston—combine to hush the engine noise to a very pleasant purr.

New WhisperGlide™ delivers up to 35% better fuel economy.

WhisperGlide's new engine incorporates innovations that enable it to achieve full engine speed at only 2800 rpm. This, coupled with the new overdrive transmission, results in a more efficient use of fuel. Superb fuel economy also comes from a new carburetor, newly designed cylinder porting, and a modified engine exhaust system. In our tank-to-tank, on-course testing we

found WhisperGlide passing the pump for an equivalent of 30, eighteen-hole rounds—up to 35% better fuel economy than the competition.

WhisperGlide™ is built with a lion's share of durability.

The WhisperGlide lightweight body is made of impact and rust-resistant fiberglass so it stands up to constant use. Underneath, the engine's crankshaft and main bearings are built tough and fitted to closer tolerances to ensure reliable operation. In fact, most engine components are covered by the exclusive Harley-Davidson two-year parts warranty.

New WhisperGlide™ is simple to service.

Merely lift the tilt-up body to expose an easy-access engine, transmission, starter and battery. Regular maintenance is easier. The carburetor is accessible without removing the air cleaner. Drive belt can be replaced without removing parts or using tools. To service the primary transmission, only one cap screw needs to be removed. Switches and wiring are more conveniently located. And the new rear bumper design and transmission permit easy towing.

See your Harley-Davidson dealer. Listen to WhisperGlide™.

Test the handling and maneuverability of our new four-wheel model. Or, try the three-wheel model with our exclusive tiller steering. Look for little things like a forward/reverse key-switch with a reverse warning buzzer and the new clip-on scorecard holder.

We have the largest network of dealers in the industry, all with a complete line of gas and electric cars and genuine Harley-Davidson replacement parts. Your local dealer has the WhisperGlide that will be pur-r-r-ect for your course.

For more information write or call: Harley-Davidson Motor Co., Inc. 3700 W. Juneau Ave., P.O. Box 653 Milwaukee, Wisconsin 53201 414-342-4680

Northrup King turf gets trampled, torn, squashed, and scuffed and it still looks great.

But that's not news to you.

The days when turf just laid around looking pretty are long gone. Now your turf has to be pretty—and pretty tough, too. Tough enough to take all kinds of wear and still go on looking terrific.

That's just why so many pros like you specify turf seed from Northrup King. For years, Northrup King has given pros all they need—low maintenance varieties, winter hardy blends, special mixes for specific geographic problems, and expert help in selecting the right one.

And no matter what Northrup King turf seed the pros use, they get turf that's good looking and hard working.

Find out more about quality turf seed from Northrup King. Talk to your Northrup King representative or distributor.

Or talk to someone with great looking turf.

Gypsy Moth from page 104

thing else. "The moth's sole purpose in life is to mate," Walt Dages explains. Pesticides to stop the moths are not in use because they are either too expensive, or, like DDT, have been outlawed.

Consumer Reaction

Given that all the weapons against the gypsy moth have their advantages and their disadvantages, consumers beleaguered by the insatiable insects were bound to be frustrated. Some firms realized that during a crisis such as this one, education has to supplement insect control. "There was more education and a lot of media coverage this year. The crisis was more fully understood in 1981," according to Walt Dages. Dages's firm, the Bartlett Tree Expert Company, sponsored public meetings to further educate the public.

"From midwinter on, even before the season began, we had educational meetings to teach about the gypsy moth," says Dages. "They were extremely well attended. We held them in town halls and school auditoriums, people spilled out into the hallways. Very intelligent questions were asked. We always made sure there was a scientist, usually an entomologist, on hand. The meetings were very effective—you learn what to expect and what not to expect."

The Haupt Tree Company sent letters out to its clients at the end of the season. The letters were a "recapitulation of the season. We want people to be prepared for more," says Eric Haupt.

Even with the education and publicity, all was not quiet on the public relations front. People who had been sprayed but were unaware of the effective date of application, complained when they were revisited by the gypsy moth. People who were unable to get through to any tree companies and helplessly watched their trees lose their leaves, complained. People who feared the side effects of aerial spraying also complained.

Some arborists complained about inaccurate media coverage and emotionalism emanating from environmentalists. Old allegations that Sevin produces birth defects were resurrected and vehemently denied.

"By and large," according to Haupt, "the people we serve were very understanding. There was relative calm. A majority of our existing and new clientele had an understanding of the nearly crisis nature of the infiltration."

Refoliation Debate

The issue of refoliation surfaced and divided environmentalists and arborists. Dr. Dick Plunkett pointed to the Taconic State Parkway in New York as a good example. "Three weeks ago," Plunkett said in mid-July, "hundreds of thousands of acres were defoliated. The Taconic was

completely bare with nothing in sight; it looked like the landscape of the moon. It's now refoliated—you can't say you have a denuded landscape anymore."

"That doesn't mean there weren't trees that died," Plunkett continued. "Defoliation does accelerate tree mortality. In one or two years the number who would have died in eight or ten years, die. But those are the diseased and damaged trees, it will even out in the long run."

Some arborists contend that statements made by Plunkett and others foster a false sense of complacency. Plunkett and his compatriots maintain that they are trying to calm the hysteria and place the "crisis" in proper perspective.

All agree that "defoliation certainly doesn't help the tree." Dr. William Wallner, Forest Service research project leader for the ecology and management of northeastern forest insect pests, explains that after a "defoliation of one or two years, the tree is susceptible to invasions by secondary organisms, which are attracted to a weakened or declined tree. Whether a tree will die or not depends on other factors as well. After a complete defoliation in forest areas, it takes up to ten years to get back to what is considered normal growth."

Refoliation depletes the starch reserve of the tree, thus reducing the amount of food energy reserves that the tree needs to maintain itself during the winter months and to bud in the early spring.

This year, some trees that refoliated still had larvae on them and were defoliated for a second time around.

Better Luck Next Year?

While the various controversies and debates about the 1981 gypsy moth infestation have yet to die down, arborists are digging in for the 1982 infestation. Preliminary reports based on the number of egg masses laid seem to point to another busy year for arborists. "Unless we have a very cold winter or there's a great deal of disease, we could be due for even greater gypsy moth infestation and even greater defoliation," Plunkett warns.

This year's incredible infestation may have tipped the scales against the gypsy moth. Many larvae starved before they fully developed. The egg masses of females might be smaller and therefore more susceptible to egg parasites. The population of predators might increase.

Even if next year's infestation is worse than this year's, slightly different areas could be the hardest hit. Wallner compares it to an "old war movie with guns in the distance and big flashes at night. The pattern of movement is from the core area. They're blown out of the area, and they

Versatile SKY-WORKER fills the bill from tree-trimming to hot line work

Why? Because Sky-Worker can prove cost-savings up to 50% through utilization of its built-in sturdy features and superior maneuverability.

Platform stays level under all conditions - dual controls operate unit from work platform or vehicle deck - Fail-safe hydraulic system, combined with optional heat-exchanger requires little warm-up time. Lower boom on Model 1035 moves through overhead arc of 135° degrees - 45 degrees past vertical - horizontal rotation is 400 degrees, 40 degrees beyond full circle.

See how Sky-Worker fits into your maintenance and trouble-shooting work plan. Write for FREE catalog, on your letterhead please.

Glade

U.S. Plant Patent 3151

KENTUCKY BLUEGRASS

**Double-duty
turf beauty.**
The natural choice.

Glade performs well in up to 60% shade with a higher resistance to powdery mildew. Additionally, Glade has better-than-average resistance to Fusarium blight. It's now used as a prime ingredient for fortification in many professional turf grass mixes. A Rutgers selection, Glade has outstanding medium to deep green color. Low-growing Glade germinates and establishes fast, developing a thick rhizome and root system for close-knit sod.

Most lawn areas have both sun and shade naturally. That's why Glade Kentucky bluegrass is the natural choice. Specify Glade for your next turf grass mix.

Gypsy Moth from page 109

spread into another area." Mullane agrees: "They start in an area adjacent to what was worst."

Next year, arborists should be better able to handle the gypsy moth. Mullane observes that "each year some improvements are made over the previous year. We were more prepared this year than last. We had minimal equipment breakdown. This year we didn't have as many headaches with chemicals as we had the previous year. The pH of the water we were using would change and it would affect our spraying. This year we used litmus paper to test the water. We saw that it did change in some streams and became very alkaline."

Marilyn Mulhern of Woodwind Associates, Inc., Princeton, NJ, says that next year they'll have "more effective planning. This year we were running and putting out fires, we have to tighten up the planning."

Arborist's Windfall?

Was all this activity a windfall for the arborist? "It's an expensive proposition," says Walt Dages. "Everyone thinks the tree companies are cleaning up. We're doing an awful lot of billing, but the profit margin is not all that different. Infestation kills trees. Tree companies can't work on dead trees. It's not all favorable."

Richard E. Almstead, president of Almstead Tree Company, Inc., in Westchester, NY, says that the "picture everyone paints that we're all making a fortune is a lie. What with time-and-a-half for overtime, working Saturday and Sunday, and the prices that keep on going up, we're not making that much. For instance, chemicals keep on going up. You use a chemical at \$1.50 a pound, you have to reorder it at \$1.75 a pound. You price a job for \$40, it costs you \$38.50. We're doing a great volume, but at the bottom line, there's no great difference."

All the extra work and effort notwithstanding, doubts remain as to whether the gypsy moth has been conquered or if it will ever be conquered. Eric Haupt noticed that the Governor of North Carolina declared war on the gypsy moth. "I wish him luck. There were efforts in the '30s with the Civilian Conservation Corps to eradicate the gypsy moth. Thousands of men worked on a more limited infestation with literally no success."

Arborists will have to keep trying.

WTT

We support NMC and ask our growers and suppliers to include the voluntary contribution on invoices to us.

**A tournament quality
putting surface.**

**A blend of
Emerald &
Pennncross?**

**Only the superintendent
knows for sure.**

Few grasses blend better than Pennncross and Emerald. That's because these two outstanding creeping bents look very much alike.

Golf superintendents proved this to their own satisfaction after using Emerald to repair damaged Pennncross greens. They learned that combining Emerald and Pennncross produced a putting surface comparable to a pure Pennncross stand with virtually no change in quality, texture or color.

And they save money doing it, because Emerald is quite possibly the best value in the grass seed business today.

That's why it is also used extensively on tees and fairways as well as putting greens.

Emerald is really a very good grass. Try it. You may be the only one that knows for sure that it's not Pennncross.

VEGETATION MANAGEMENT

By Roger Funk, Ph.D., Davey Tree Expert Co., Kent, Ohio

Q: Why do trees in waterlogged soils show signs of wilting as if they are not getting enough water?

A: Excess water replaces oxygen in the soil and the resultant poor aeration impedes water absorption by roots. It also reduces photosynthesis.

Many trees produce adventitious roots until they reach maturity, which may help explain why older trees are more apt to die back in waterlogged, compacted or construction-altered soils.

Q: For the past two years the pine trees we had planted along a highway were severely injured by salt applied in the winter. Could you recommend some evergreen trees that would not be injured? (Michigan)

A: All trees are probably injured, but some are more tolerant than others. Evergreen trees listed as salt-tolerant include Austrian pine, Japanese black pine and pitch pine. Evergreen trees listed as salt-intolerant that should not be planted, include Eastern white pine, hemlock and red pine.

Q: What would you recommend for lawns that are growing in high sodium soils?

A: Aside from the possible effects of excess salts which impair the absorption of water and nutrients, a high sodium content causes deaggregation of soil particles, resulting in compaction and a severe reduction in soil aeration and water infiltration. In addition, the availability of certain nutrients such as iron and manganese may be limited, whereas other micronutrients such as boron may become available in concentrations high enough to be toxic.

Sodic soils are usually corrected by amending with sulfur or gypsum (calcium sulfate) which replaces the exchangeable sodium on soil colloids. However, these materials are relatively slow-acting and repeated applications over a period of years may be necessary.

Ideally, the soil should be drenched prior to adding the soil amendment unless the soil is waterlogged and does not drain properly. If the materials are not incorporated, the soil should be watered after the application to move the materials downward into the root zone. After a period of several months, the soil should again be drenched to leach the soluble sodium salts.

Core cultivation will improve the exchange of air and water between the atmosphere and soil and improve the penetration of fertilizers, pesticides and materials being used for the correction of sodic soils. The net effect is to encourage deeper, more extensive rooting less susceptible to environmental stresses.

Until the sodium problem is corrected, particular attention should be given to fertilization since many of the nutrients will be "fixed" as a result of the high sodium content. Soil tests and field plot studies will help determine the special requirements of turf growing in sodic soils.

Q: What can you tell me about the rust disease that is affecting ash trees in the Philadelphia area?

A: Ash leaf rust is caused by the fungus *Puccinia peridermiospora*. The fungus overwinters on the

leaves of salt marsh and cord grasses. In midspring, wind-borne spores are carried as far as 100 miles to ash trees and infect leaves, petioles and shoots. Symptoms of ash leaf rust appear in late spring as yellow-orange spots on the upper surface of ash leaves and on petioles and shoots. After about two weeks, yellow-orange cups appear beneath the spots on the under surface of leaves and on other infected tissue. Heavy infestations cause leaf distortion and girdling of petioles and shoots. Early leaf drop is common, often resulting in complete defoliation by midsummer on severely infected trees.

Ash rust is seldom destructive enough to warrant either prevention or control measures. Sulfur sprays are sometimes recommended when trees have been infected for successive years or to protect ash for aesthetic reasons. Contact your local extension service to determine the status of sulfur sprays in your area.

WE GET DOWN TO THE NITTY-GRITTY.

BEFORE IT DOES YOU DIRTY.

Toro goes all out to give you the kind of riding rotary mower you want most.

A mower that keeps you cutting. Gets the job done.

But even the best mower can be stopped cold by a tiny enemy. Dirt.

So we get down to the nitty-gritty. Equip each Toro Groundsmaster 72® and Groundsmaster 52® with a heavy duty Donaldson air cleaner.

It filters out dirt, dust, grit and other contaminants before they can do you dirty. In costly downtime,

excessive engine wear, shortened service life.

Just dump the dust cup at the end of the workday, and wash the cleaner element weekly.

And we build-in many more advantages to keep you cutting. Like hydrostatic drive and four wide stance wheels.

Call your Toro® distributor. He'll tell you all about Toro riding rotary mowers. Right down to the nitty-gritty.

Introducing Pel-Tech™ Little benefin pellets that solve big turf problems.

The Andersons, the professional's partner, has done it again.

After rigorous, on-the-job liquid spray testing, we proudly introduce Pel-Tech... the state-of-the-art in pelletized benefin, an industry acclaimed top choice for effective pre-emergence crabgrass control.

We're gonna stir up some excitement.

Major lawn service companies that assisted us in proving Pel-Tech's high efficiencies and outstanding economies are already applying it confidently. And they're coming back for

more. Cost savings are ranging from 20 to as high as 40 percent against leading competitive products. Exciting? You bet!

Here's some more good news:

- Pel-Tech disperses quickly with minimum mechanical agitation.
- It's compatible with most commonly used fertilizers and pesticides.
- Won't stick to plant foliage.
- It's EPA approved.
- Pel-Tech is conveniently packaged.
- Urea carrier delivers 35 percent nitrogen.

The Big Difference.

The big difference that sets Pel-Tech *way out* in front of the competition is the result of our unique pellet forming process. Developed in The Andersons' research laboratory, the technique has enabled us to combine a nutritional urea carrier with a performance proven benefin compound.

What this means for you is that, with Pel-Tech, you're getting a stable herbicide product that's nearly 100 percent composed of active ingredients... *throughout each pellet!* Not just an outside coating.

Call us toll-free or write for

the name of your nearest Pel-Tech distributor. He'll be able to tell you more good news about this exciting breakthrough for sprayable pre-emergence crabgrass control. You'll be glad you did.

Another fine, quality-controlled product of Jacklin Seed Company.

PRODUCTS

Royer model 400 all-hydraulic, diesel powered shredder/mixer processes up to 250 cubic yards of soil or organic materials per hour. Designed by the Environmental Products Division of Royer Foundry & Machine Company, the unit can be used with loaders having buckets as large as 10 cubic yards. The 12' 8"

discharge permits stockpiling or direct truck loading. Yet, the shredder/mixer, with its 90 h.p. engine, is designed for over the road travel between job sites.

A patented steel-cleated belt provides four-step continuous processing that shreds, aerates, mixes and automatically separates non-shreddables.

An automatic electrically operated control system adjusts the feed conveyor speed to the load on the shredding belt so the machine is always operating a maximum output for the condition of the material being processed, without continuous operator control.

Furadan 10 G insecticide has been granted a label by the South Carolina Crop Pest Commission. The Commission issued a Special Local Need Registration to the Agricultural Chemicals Division of Mobay Chemical Corporation which permits soil application of the granules to pine trees for control of the Nantucket pine tip moth.

In early spring, 5 to 7 ounces of Furadan 10 G should be applied to each one inch of basal diameter in young southern pine plantations. Furadan 10 G should be applied to the soil under the drip-line of the trees and incorpo-

rated with a suitable device. Pines planted for Christmas trees should be treated two times per year, once in early spring and once in early summer, using 5 grams in the tree's first year, 10 grams in the tree's second year, 15 grams in its third year, and 20 grams in its fourth year. Five grams equals about one-half of a teaspoon.

Introducing the 4200 lb. capacity Trailer from Snowco.

Snowco offers a broad selection of ramp, tilt and box trailers, with capacities from 1000 lbs. to 4200 lbs. Shown here, Snowco's ramp loading utility trailer Model 20-002, with a capacity of 1150 lbs.

Snowco built their reputation on sturdy dependable trailers. Their big new 4200 lb. capacity utility trailer has the same top-quality construction that makes every Snowco trailer rugged and practical. This newest trailer is ideal for hauling grounds maintenance equipment, construction equipment, ditchers, and other bulky, hard-to-handle loads.

Standard equipment includes:

- heavy-duty steel deck
- adjustable loading ramps
- hydraulic brakes
- mag wheel covers
- screw-jack tongue stand
- adjustable hitch height

Snowco's lo-ride suspension system makes loading easy and lowers the center of gravity for maximum stability and safety at legal highway speeds. What's more, the big new 4200 lb. capacity trailer is backed by the reliable Snowco Warranty.

No matter what your hauling needs, Snowco's new top-of-the-line trailer can handle it...at a big 4200 lbs.

Paving Manufacturers Association states that the actual construction and installation methods of the pavers eliminates the need for expansion joints. It also eliminates the cracking associated with poured concrete and asphalt roads and walk slabs.

The density of the pavers, less than 5% absorption, virtually eliminates freeze thaw problems. Their strength, 8000 psi, allows the pavers to be used in areas with heavy weight load requirements. Pavers are available in color as well as natural concrete.

The Water Machine, from Cascade Designs, Inc., is a portable pressurized watering system suitable for operation anywhere. The pressurized tank is sealed and spillproof. Clean and quiet, the machine uses pressure instead of pumps, motors or batteries. Each tank receives a permanent pressure charge at the factory. An internal valve system maintains the permanent air charge even when the water is fully discharged. The Water Machine comes in two models, Model Mini WM-8, with a tank volume of 8.5 gallons, and Model

Maxi WM-18, with a tank volume of 18 gallons.

Tree & Shrub Root Feeder Fertilizer Cartridge is specially formulated to stimulate root growth and reduce shock

after transplanting. High in phosphorous and containing a combination of fast-acting and slow-release nitrogen, the cartridge aids new plantings in developing a sound root system as well as stimulating proper foliage and top growth. A free sample of starter cartridges is included with each Root feeder, from Ross Daniels, Inc. The new fertilizer cartridges are available in packages of 12 cartridges and an economy size containing 60 cartridges.

ELIMINATE LEAF GRIEF

with a rugged Woods Leaf Mulcher

Are those leaves of brown getting you down? Well, if they are, you can eliminate "The Brown Leaf Blues" by specifying a handy leaf mulcher for your new Woods Model 59, 306, RM59 or RM306 mower.

The mulcher attaches easily and is designed to thoroughly disintegrate leaves, returning valuable organic nutrients to the soil.

And don't forget, if you already own one of these four Woods rotary lawn mowers, you can add a leaf mulcher to your existing unit.

Contact your Woods dealer for a demonstration or write for more information. Do it today for sure!

Chipco 26019 fungicide, manufactured by the Agrochemical Division of Rhone-Poulenc Chemical Company, has been registered by the EPA to control turf diseases on fairways and lawns for up to 28 days. The up-to-28 days registration is for preventive control of the important spring and summer turf diseases: dollar spot (including benomyl resistant strains), brown patch and Helminthosporium leafspot and melting out.

The new spray interval allows the Golf Course Superintendent to embark on a more long-range fairway disease control program. The lawn care applicator can incorporate the disease control brought about by Chipco 26019 into his maintenance service contract.

Circle No. 186 on Reader Inquiry Card

Hinder repellent, a deer and rabbit repellent, is now registered for use in South Carolina. Labeled for use in 31 other states and Canada, Hinder can be applied by conventional spraying methods or painted on the bark of trees and shrubs to prevent deer and rabbit damage. To repel deer, preventive applications should be made just prior to periods when deer can be expected to

feed on crops. Re-treatment may be necessary after a heavy rainfall.

The repelling action is caused by odor, not by toxicity. The repelling ingredients are derived from natural sources. For fruit tree, vine and forage and grain protection, apply three to five gallons of Hinder in five to ten gallons of water per acre by air, or in 100 gallons of water per acre by ground sprayer. To protect vegetable and field crops, or nursery and ornamental crops, apply two to four gallons in five to ten gallons of water per acre by air, or in 50 to 100 gallons of water per acre by

ground sprayer. Hinder, a Leffingwell product, is marketed by Thomson-Hayward Chemical Company.

CASE STUDIES:

The compact trencher with a bagful of tricks: 25+4.

Most times the best player on the course is the one who makes all the shots. Long and short. Around trees. Through narrow openings. In all kinds of conditions.

That's just the kind of trencher the Case 25+4 is. A total player. With the compact D70 backhoe, a fully hydraulic backfill blade, and trenching capability to 66" (1676 mm) deep, the 25+4 can handle the toughest hole on your course. Whether it's for installation of sprinkler systems. Drainage work. Tree planting. Or just about anything.

At 23 hp (17 kW) it gives you a perfect balance of power and economy. It's articulated and has 4-wheel hydrostatic drive. So it'll probably never get trapped

someplace you don't want it. And it won't tear up the turf getting to and from jobs.

The 25+4 is easy to operate and service. New amateurs quickly learn how to use it. And old pros just love it.

The Case 25+4. The ideal trencher for golf course maintenance. The compact trencher with a whole bagful of tricks.

the herbicide will be tested widely in 39 states and is expected to be commercially available in 1982. "Oust" is a highly active, broad spectrum weed killer that controls numerous broad-leaves and grasses, especially johnsongrass, one of the most noxious weeds in the country. The herbicide works best on actively growing plants. It translocates from the leaves to the rhizomes and kills the rhizomes. The company plans to market the product as a 75 percent DF (dry flowable) formulation, pouring easily and eliminating the problem of dust and material residue. Well suited for industrial weed control, comparatively low rates of application are necessary. Toxicological studies demonstrate favorable environmental characteristics and a low order of mammalian toxicity.

With Dyson Bucket forks, one worker with an open end wrench can convert a front end loader into a fork lift truck in minutes—without altering or damaging the bucket. The fork's unique design eliminates the need to drill holes or weld brackets to the bucket. Instead, the buckets are mounted with a clamp

bar, which is secured to the wear plate of the bucket by four hex head bolts. Weight is thus evenly distributed throughout the entire surface of the bucket, reducing the twisting action on the wear plate and bucket that may occur with individually mounted forks. A convenient handle makes carrying and installing the forks easier. Capacities of the alloy steel forks from Jos. Dyson & Sons range from 4,000 to 8,000 lbs. The width of the fork can be adjusted in 6" increments. Special designs and accessories are available.

Circle No. 191 on Reader Inquiry Card

Aero-Seeder #84, from Olathe Manufacturing Company, thatches and seeds simultaneously. It can also just be a thatcher. A 16 H.P. engine propels the machine, which is equipped with 10 point-12 gage blades, an electric start

and a 20 pound seed hopper. The seeder shuts off automatically when the blades are disengaged, and returns to the previous setting when activated. Blades cut a continuous groove 1/8" to 2" deep, while the seed is being dropped via seed tubes. The Olathe Aero-Seeder is self-propelled.

THE TROPHY TURF

What Do Turf Experts Say About Pennant* Ryegrass?

Universities and other organizations are continually testing new varieties of grasses under rigidly controlled conditions. Recognized experts objectively monitor these tests, and their findings are published as an aid to the grass seed industry and to consumers.

In a recent series of tests, PENNANT performed well even under low nitrogen conditions during the fall stress period, held its color as winter approached, and showed remarkable resistance to common lawn diseases. In both its warm and cool season ratings, PENNANT was tops. Where the need exists for a lawn that establishes quickly, PENNANT proved itself to be an ideal choice.

PENNANT also ranked high in overall turf performance. Its attractive, medium-high density, and fine leaf blades gave PENNANT a distinct edge over its competitors. Good mowing characteristics was another factor: its moderately dark-green color persisted through several summer mowings, and its blades were clean, not ragged.

So well did PENNANT perform in several of these independent turf trials, it was deservedly nicknamed "The Trophy Turf."

FALCON

PVP applied for

Tall

Fescue

New turf-type tall fescue of the 80's

You'll like this new, fine-textured variety with higher density than most of the currently available tall fescues. Falcon is a leafy, moderately low growing turf-type variety with pleasing green color and tolerance to heat and drought. It's a good performer under minimum maintenance programs, too. Throughout its area of adaptation, mature stands of Falcon have shown tolerance to wear and moderate shade which makes it useful for home lawns and play areas such as athletic fields and parks.

Touchdown Kentucky Bluegrass

Sod growers specify Touchdown for profit

Rapid development of marketable turf is the key to profitable sod production. That's why sod growers prefer Touchdown.

An aggressive turf that fills in quickly, crowds out weeds and undesirable grasses, even under low mowing heights, Touchdown is a must in any turf program. Touchdown's strong and vigorous rhizome system means tough turf and quick healing from traffic and machine damage. Whether you seed or sod, specify Touchdown.

Seeding REBEL in late September

Another leader goes to Washington . . .

Rebel

TURF TYPE TALL FESCUE

Washington, D.C.'s Congressional Country Club boasts some very well-known members. And some very demanding ones.

Bill Black, Greens and Grounds Manager, needed to rebuild and reseed the driving range which was completely redesigned by Ed Ault, golf course architect, to accommodate not only the members but professional golf events as well. But with virtually no topsoil, the grass had to be a tough variety with high-performance qualities. And one that would persist during commonly hot, humid summers in Washington, D.C. Bill's choice? A mix of 90% REBEL turf-type fescue with 10% BARON Kentucky bluegrass.

The range was seeded in late September. By mid-November — only seven weeks later — REBEL had exceeded the expectations. Bill had a dense, fine-leaved*, attractive turf.

*University test results prove REBEL to be as much as 30% finer and 188% denser than Kentucky 31.

(L to R) Bob Benning, Golf Professional, Vanessa Jensen, Lofts/Maryland and Bill Black, Greens and Grounds Manager admire the REBEL turf only 7 weeks after seeding.

REBEL - the tall fescue that's going places. Go with REBEL!
