34 COVER STORY: THE BEST OF THE ROADSIDES
When the National Roadside Vegetation Management Association held its conference last fall, it named annual contest winners. Here are brief profiles of three.
34 North Carolina DOT
35 Ray Dickens, Ph.D.
36 Orange County, Calif.

42 TALL FESCUES FOR DRY, URBAN LANDSCAPES
by Bob Morris and John Van Dam. Successful breeding and selection programs of tall fescues have produced the turf needed to fill in the hot, dry, low maintenance landscapes where bluegrass often fares poorly.

47 PLANNING FOR PROGRESS
by Terry McLver. In 1979, ambitious contractors and architects, realizing that growth required mutual respect and cooperation, drew up plans for progress. Almost 10 years later, have things improved?

52 THE TREE CHALLENGE
by Terry A. Tattar, Ph.D. Plans to replace the trees that stood as forerunners in America’s first urban parks were never made. Is it too late?

56 PROJECT PROFILE
New York City is celebrating its roll in American history by planting trees and flowers.

60 PLANNING FOR SUCCESSION
by Ed Wandtke, CPA. Continuation of the family business requires that you choose your successor wisely, whether they’re related to you or not.
It's Daconil 2787. Build a solid program with the broadest spectrum fungicide.
Two out of three superintendents spray their tees, fairways and greens with Daconil 2787. It’s the cornerstone of their disease control program. And for some solid reasons. Only Daconil 2787 controls 12 major turf diseases on over 90 grasses under most climatic conditions.

And, only Daconil 2787 has a 19-year record for consistently superior performance. Especially on tough diseases like brown patch, dollar spot and leafspot. What’s more, there’s never been a documented case of disease resistance to Daconil 2787.

And remember, you can reduce the chance of a disease developing resistance to other fungicides by tank mixing Daconil 2787 for its labeled diseases, with the other fungicides to which disease resistance may develop.

Daconil 2787. The cornerstone of a solid disease control program.

Fermenta ASC Corporation, 5966 Heisley Road, P.O. Box 8000, Mentor, OH 44061-8000.
You know who you are

This month’s issue carries a story about the progress being made by landscape architects and contractors in their daily working relationships.

Have you, Mr. Contractor, ever changed an architect’s plans without first consulting with him? Do you believe the architect has a right to see his plans carried out as drawn?

Do you, Mr. Architect, draw your designs after considering the total adaptability of the plan to the job site? Do you believe a contractor deserves to work from plans that are practical?

The green industry’s best contractors and architects communicate, respect each other’s talents and depend on each other for guidance. They figured out long ago that summers are short, and once you step between the lines, it’s time to play ball.

A contractor interviewed for the story on page 47 admitted that some contractors will, for example, use a substitute irrigation product without telling the architect or developer. “Once it’s underground,” he said, “who’s going to know?”

That kind of behavior might go over in high school homeroom, but not in the real world. Sure, no one but the contractor will know of the switch. But if a contractor conducts all his business that way, his days in business are numbered. At best, he’ll creep along and make a minimal living.

Every profession has good and bad practitioners. Many great contractors and architects do their best for themselves and the green industry. But some fly-by-night, seat-of-the-pants operators eek out a living by playing fast and loose with professional ethics. They drive trucks that are ready for the boneyard, they don’t bathe and they wear the same T-shirt for a month. The true professionals in both fields are constantly looking for ways to improve.

The industry has made great strides in the past decade. But the responsibilities remain, and they extend in many directions.

Architects: draw with practicability; take charge of the project; visit the site regularly; be open to modification. Contractors: accept the architects’ knowledge; he needs you as much as you need him; communicate; don’t cut corners. Developers: be aware of what is going on at all times, and know that the architect is the project leader. If a contractor makes a suggestion, talk to the architect before giving your okay.

The only side we’re taking is that of professionalism and productivity. The industry has enough to deal with as it is, thanks to the anti-everything crowd. Let’s continue to work together.

Terry McIver, associate editor
...for Turf-Seed's new

Turfin' II
guide to the proper
grass for popular sports.

Full 8½ x 11
size,
four color
printing.

All sports turf managers and superintendents will want to read this comprehensive guide to turfgrass varieties for athletic field, playground and golf course use. This volume is sprinkled with sports trivia and history, diagrams of playing areas and comparisons of natural turf with artificial surfaces. So, order your copy today... then grab a bag of warm popcorn or peanuts and settle in for entertaining, enlightening and straightforward sports turf talk.

Special Introductory Offer:

**ORNAMEC**

Over-the-top post-emerge grass herbicide labeled for over 400 ornamentals.

At last, there is an efficient way to control grasses in ornamental beds and nurseries. It's Ornamec! — surely one of the most important innovations in landscape and nursery management. Please don't pass up this special introductory offer:

Now, you can control even such tough perennial grasses as bermudagrass, quackgrass, rhizome johnsongrass and torpedograss, along with 29 tough annual grasses including barnyardgrass, crabgrass, and foxtail.

So easy! So economical! So efficient! Just spray Ornamec over the top and it's the end of these grassy weeds that can make such an unsightly mess out of the best designed planting of ornamentals.

We're so eager for you to try Ornamec that we're introducing it by giving you the appropriate amount of Aqua-Zorb® Nonionic Surfactant free of extra cost when you buy the Ornamec from your PBI/Gordon distributor.

Where are you going to use your introductory package? Well, here's a list of over 400 ornamentals that are labeled for Ornamec Over-The-Top . . . and there are 129 additional species and varieties that are labeled for directed application.

**Sprayer offer:** For details on how you can receive a $100-value SP-1 Back-Pack Sprayer for only $35 when you buy Ornamec, call our Sales Service department.

**Toll-free, 1-800-821-7925**

**List of Labeled Ornamentals:**

- Abbotswood
- Abelia, Glossy
- Acacia, Jim wheat
- Acacia, Shoe-string
- Acacia, Willow
- Acacia, Willow-leaved
- Admiral
- African sumar standard
- Agaratum
- Almond, Flowering
- Aloe, Barbados
- Aloe vera
- Aloe zanzibarica
- Aisthea
- Alyssum
- Amor River
- Annual statice
- Anthony Waterer
- Ash, Arizona
- Asparagus, Myres
- Asparagus, Sprenger
- Aucuba
- Aucuba japonica variegata
- Aunis
- Australian bush cherry
- Bamboo, Golden
- Banana, Ethiopia
- Banksia
- Barberry, Mentor
- Bearberry, Rec
- Bellflower
- Berkman's
- Bird of paradise (Caesalpinia gilliesii)

---

Shrink-wrapped with the quart size Ornamec is four ounces of Gordon's Aqua-Zorb® Non-ionic Surfactant. Pint and gallon sizes also come with appropriate amounts of this superior surfactant piggy-backed to the herbicide.
PICTORIAL QUIZ . . . for landscapers and nurserymen: How are you going to get the unsightly, nutrient-robbing grasses out of the problem areas shown on this page? The answer is to spray or treat the top with Ornace. It makes landscaping handiwork and nursery husbandry look good.
LEGISLATION

New lawn council meets with EPA representatives

WASHINGTON, D.C. — Better communication between the Environmental Protection Agency (EPA) and the lawn care industry was a chief topic discussed during a recent meeting in the nation's capital.

The meeting between PLCAA's newly-formed Council for Lawn Care Information and EPA officials was especially timely in light of recent activism against and legislation regulating the use of pest control chemicals in many states.

Those present at the meeting included Jim Wilkinson, PLCAA's director of environmental and regulatory affairs; Bob Earley, publisher of Lawn Care Industry magazine; and various LCOs, university experts, manufacturers, formulators and distributors.

The meeting included a discussion about whether or not LCOs would be included in agricultural worker protection standards currently being promulgated. The lawn care industry would like input on these standards, and would like to see distinctions made between mixers, loaders and applicators.

Depending on the toxicity of particular pesticides, there might someday be three levels of certification required. Some products would be applied only by certified applicators, others would require an on-site supervisor and others would require a supervisor be available within a reasonable time of application.

MORE LEGISLATION

PLCAA challenges new local ordinance in Mayfield, Ohio

COLUMBUS, Ohio — The Professional Lawn Care Association of America (PLCAA) has filed in the U.S. District Court of Ohio challenging a local ordinance on constitutional grounds.

The village of Mayfield had passed an ordinance requiring lawn chemical users to notify abutting neighbors when they planned to spray lawns and to tell them the type of chemicals being used.

"The industry is not opposed to reasonable, sound regulation, and we're not opposed to further regulation in the state of Ohio," says PLCAA's Jim Wilkinson. "However, there are some 88,000 local governments in the United States, and if each of those governments decided they wanted to regulate the lawn care industry, it would create absolute chaos."

The PLCAA is asking that Mayfield be permanently restricted from enforcing the ordinance and that it be prohibited from passing similar ordinances.

The association believes that the Federal Insecticide, Fungicide and Rodenticide Act established that only states or the federal government could regulate pesticide use. "Mayfield Village," reads the suit, "by purporting to regulate pesticide use, violates the Supremacy Clause of the U.S. Constitution."

Sign-posting regulations took affect across Ohio on June 1. They prohibit lawn service companies from applying pesticides to residential lawns in any municipality or subdivided area of a township without meeting certain requirements.

Requirements include written notification to the property owner listing the pesticides applied and other information.

Companies are also required to make a reasonable attempt to notify residents of adjacent property prior to an application, providing the neighbor has asked the company in writing to provide such notification.

Such proposed legislation is not unprecedented. In 1984, the city of Wauconda, Ill. unsuccessfully tried to pass the same type of laws that would, in effect, pre-empt the FIFRA laws.

TREES

'Waggle' damage examined in U.K.

LONDON, England — Scientists here are seeking ways to minimize tree damage caused by high winds.

Wind damage results in the loss of hundreds of thousands of trees each year in the United Kingdom, representing approximately 13,000 forest acres.

Dr. Ronnie Milne has been leading a research team at the U.K. Natural Environment Research Council's Institute of Terrestrial Ecology that could have applications in the U.S.

Milne reports that 40 mile per hour winds combining with the trees' natural sway movement results in extreme damage, or "waggle."

Milne and his associates are constructing mathematical models of how trees bend in the wind in order to find ways to reduce the losses due to wind damage. According to Milne, site selection, soil depth, spacing and drainage all affect the trees' wind survivability.
TECHNOLOGY

Companies search for alternatives to synthesized chemical pesticides

RALEIGH, N.C. — America is currently in a state of “chemophobia,” says R.L. Brandenburg, extension entomologist at North Carolina State University. Companies are responding by searching for alternatives to synthesized chemical pesticides, he further notes.

“Over the next five years or so it will become more and more important to find alternative approaches,” he says. “The public is demanding it, even though they’re demanding nicer lawns, nicer shrubs and nicer landscapes at the same time.”

The public often receives information that is presented to it in a very emotional fashion, argues Brandenburg. “Sometimes emotion will overrule factual information and, as a result, we need to be looking at some of these other areas and make them available to the public.”

The most obvious alternative, yet often overlooked, is to maintain vigorous, healthy turf, says Brandenburg. “Many insects like thin turf because it’s easier for them to dig into the soil, lay their eggs and move through and feed on the grass.”

Reducing thatch is also important, he adds, because “insects and thatch go together. The thatch provides a protective barrier for them by binding pesticides, preventing them from reaching the insect.”

Biologicals currently being used successfully include milky spore and parasitic nematodes for controlling white beetle grubs. “Improved techniques to produce milky spore have been developed and should improve its effectiveness over a wider range of temperatures and species,” he says.

Parasitic nematodes have been around for years, but they remain an expensive alternative. “The one that I’m aware of that is available for turf would cost about $800 an acre. But in a few years, as the technology is improved, these may be produced much more cheaply.”

Other biologicals to keep an eye on, according to Brandenburg, include various forms of diatomaceous earth and crustacean shell products, many of which remain untested under controlled situations, but are currently in the marketplace. These products destroy insect eggs.

FERTILIZATION

It’s almost time!

FORT COLLINS, Col. — Fertilization between August and December will improve heat and drought tolerance of turfgrass and result in less mowing, according to researchers at Colorado State University.

Studies by Drs. Tony Koski, cooperative extension horticulturalist, and Ohio State turf specialist John Street showed late season applications of nitrogen enhance fall and winter color of perennial ryegrass and tall fescue. The studies also determined that

BIG NUMBERS...Roundup herbicide should enter the elite ranks of $1 billion products, according to an analysis by Prudential-Bache Securities. The firm predicts worldwide sales of Monsanto’s popular broad spectrum herbicide to exceed that mark sometime in 1989.

THE DEADLINE...for entering the 20th Annual Associated Landscape Contractors of America’s Environmental Improvement Awards Program is Sept. 1. Entry forms can be obtained by calling ALCA at (703) 241-4004.

‘PLACEBOUND STUDENTS’...The Institute of Food and Agricultural Sciences (IFAS) has a new program for non-traditional students who cannot leave work or family to attend school. The innovative program is for students who pursue a degree in ornamental horticulture and the most recent graduate is Hilberto Gilbey, manager of Ram Plant Growers in Fort Lauderdale. “The program helps industry employees who also want to continue their education and training,” says Dr. Stephen Verkade, program coordinator. A full, four-year offering of courses is expected by next year.

OLD FRIENDS NEVER DIE...An old friend, J. Mark Nuzum, has joined Western Branch Holding Company Nitrex as vice president of specialty products. Nuzum, who has been in the green industry since his days at Turf Wiz and Tidewater Agricorp, is formerly a manager with the Turf Division of Lebanon Chemical Co.

COOLING SPRINGS...According to a recent article in Golf Digest, golf course construction in Palm Springs, Calif., may be one of the reasons the area’s temperatures have dropped since the early 1970s. Dr. Robert Balling of Arizona State University says that solar energy is absorbed by concrete and asphalt in urban areas while golf courses and other parklands have an opposite, cooling effect. Palm Springs temperatures have dropped about two or three degrees in the last 15 years.

POURING IT ON...Despite new efforts by the green industry to decrease pesticide use through IPM programs and bio-controls, overall U.S. pesticide demand will grow four percent yearly through 1992. According to an independent report by John Clifford of The Freedonia Group, Cleveland, Ohio, pesticide sales will reach $5.4 billion by 1992. “Biological control measures cannot match pesticides’ effectiveness and thus will not displace their dominant role,” a press release notes.

Introducing the fine art of broadleaf weed control.

New Gallery.

Look closely. This may be the last time you'll see these broadleaves on display.

Elanco introduces the unique preemergence broadleaf weed control for golf courses. New Gallery 75DF. An original work of art. And science. With a new chemistry so advanced, it outdates postemergents, saving you time and labor costs.

The Gallery collection includes 44 of your toughest broadleaves such
as spurge, chickweed and white clover. With no reproductions allowed.

All you'll see is masterpiece turf. Free from broadleaves. And free from injury. New Gallery is actually more tolerant to all major species of cool and warm season turf, including bentgrass, than other herbicides. And there's no risk of off-site damage to nearby ornamentals.

Discover the fine art of broadleaf weed control with new Gallery. See your Elanco distributor. Or for a free brochure, call toll-free: 1-800-352-6776.

New technology in fertilizers has one application per year

MILPITAS, Calif. — Sierra Chemical Co. has released to the turf industry a revolutionary new fertilizer. Called Customblen, these resin-coated controlled-release fertilizers are based upon Sierra’s Osmocote technology. They release nutrients to the turf plant for up to one year with one application.

The product has been used in the nursery market for the last 20 years, but is new to turf.

“Sierra has recently developed a line of products for both turf and ornamental use in landscape, lawn care and golf course applications,” claims marketing manager Mark Broxon. “University turfgrass researchers are testing controlled release fertilizer (CRF) products this year.

XERISCAPE

New garden illustrates conservation and beauty

MESA, Ariz. — To demonstrate the water conservation properties and beauty of xeriscaping, a one-acre xeriscape garden was recently opened for public viewing here.

The result of a joint venture between Mesa Community College, Salt River Project and the city of Mesa, the garden provides examples of new design possibilities, and ways to replace or modify existing landscapes to make them more water efficient.

“This was definitely a community project,” says Paul Freestone, water conservation specialist for the city of Mesa. “We started the garden with $25,000 in cash and ended up with a landscape project worth approximately $150,000.”

Thirty-nine landscape and irrigation companies donated time and material to the garden, and local citizens donated their time to complete the project. Extra help was provided by the University of Arizona Extension Service and Arizona State University’s Graphic Arts Department.

The garden features 150 varieties of shrubs and ground covers, 60 varieties of trees and three types of turfgrasses. All are zoned in accordance with their water needs and sun exposure. Signs posted throughout the garden identify the various plants and explain the principles of xeriscaping.

Keep your fairways looking great.
Golfers love to play on beautiful fairways. It's that simple. Which is why it's so important to keep your course in top shape. That means controlling diseases like dollar spot and anthracnose. And that means a program using BAYLETON® fungicide.

BAYLETON is taking care of more and more beautiful fairways because more superintendents are discovering how long it lasts. How much they save in application costs by making fewer applications. And how good it makes them and their fairways look.

BAYLETON. Because golfers play favorites. For more information, contact Mobay Corporation, Specialty Products Group, Box 4913, Kansas City, MO 64120.

BAYLETON is a Reg. TM of Bayer AG, Germany.
ORNAMENTALS

'Common sense' helps control insect problems

RALEIGH, N.C. — The best method of insect control on ornamentals is often common sense, says J.R. Baker, Ph.D., an extension entomologist at North Carolina State University.

“If you’re fortunate enough to choose which plants are to go into a landscape, select varieties that don’t have a lot of insect and mite problems,” suggests Baker. A visit to a nearby, healthy landscape will reveal which varieties are thriving and which aren’t.

Another seemingly obvious step is to select plants that are healthy to start with. For example, look for cankers on the stem of dogwoods, which attract dogwood borers. If box elders are being considered, use males. Females produce seeds, which attract box elder bugs.

“Also, if you’re setting out shade trees, make sure you have a way to irrigate them for the first couple years,” says Baker. “Once a tree starts to wilt just a little bit, it will be susceptible to flat-headed wood borers, round-headed wood borers, ambrosia beetle, bark beetle — any type of insect that is attracted to trees under stress.”

LANDSCAPING

Trees plant temporary roots

PHOENIX, Ariz. — Hundreds of date palm trees have been planted in the middle of downtown Phoenix prior to their eventual relocation to an area landscaping project.

Valley Crest Landscape, a subsidiary of Environmental Industries, Inc., is responsible for the urban forest. The company is completing Arizona Center, a $515 million office/retail project on 18.5 acres. Rouse-Phoenix Development Corp. is building the center.

More than 900 trees were planted at the urban resting place. The mature specimen trees are at least 15 years old, and range in height from 20 to 42 feet. Valley Crest purchased an entire date grove in Indio, Calif., and shipped them 250 miles to Phoenix.

The relocation is expected to last into 1990.

ORNAMENTALS

The Mulching Solution

Date palms in their native Indio, Calif. location before their replanting in Phoenix by Valley Crest Landscape.
It doesn't have to be an uphill grind. Not with Kubota's F2400 Front Mower. Four-wheel drive delivers traction where you need it most—on uneven, slick or damp ground. No more wheel-spinning means no more turf damage.

If you're up against one tough obstacle course, there's rear-wheel steering and independent brakes. Together, they provide the tightest possible turning radius.

Then for your mowing comfort, there's our famous clutchless hydrostatic transmission, as well as power steering and tilt-wheel.

Attachments? You can choose from a 60" or 72" rotary mower, a flail mower, rotary broom, front blade or snowblower. Even a grass catcher with 60" and 72" dumping heights. Of course, they're all lifted hydraulically. Effortlessly.

And its powerful, economical 24hp diesel engine will leave you wondering why anyone would own anything less. So if you've got the inclination, just write for our free Grounds Maintenance Equipment Guide at Kubota Tractor Corporation, P.O. Box 7020-A, Compton, CA 90224-7020.
You can use Mavrik Aqua

Mavrik Aquaflow is the ideal insecticide/miticide for landscape maintenance.

It is a non-restricted product that is highly effective against the majority of insect and mite problems.

There are no phytoxicity problems. Mavrik® has been proven safe for hundreds of plant species, even when sprayed right on the blooms.
No matter what kind of insect and mite pests you come up against, hit them with Mavrik Aquaflow. And it’ll be over for them.

See your distributor today.
INDUSTRY

Sandoz pops Nader for wrongful report

DES PLAINES, Ill. — John A. Licata, director of environmental, health, safety and quality assurance for Sandoz Crop Protection Corp., took no time to fire off a poignant response to a recent anti-pesticide report.

The highly-publicized report was issued by Ralph Nader's Public Citizen's Congress Watch on the lawn care industry. Licata's letter to the author of the report points out inaccuracies in the group's criticism of the herbicide Banvel and, along the way, gives us a good model to follow when undue criticism rears its ugly head.

Licata writes that Banvel is not restricted in California and that "there is no substantiation that dicamba, the active ingredient in Banvel, is associated with an increased chance of miscarriage." He points out that fetotoxicity was slightly increased in rabbit studies—which is not unusual—and that the study's author considered it insignificant when making the report.

Also, concerning remarks that the product is a threat to groundwater, Licata says that "...because of its rapid degradation and the soil absorption of the degradation products, dicamba is not normally detected in surface or groundwater. It has not been detected at levels above the EPA's health advisory level."

Besides Banvel, Sandoz also produces Bonzi growth regulator, Mavrik Aquaflow and Pentac for the lawn and landscape markets.

A.A.N. director of government relations Ben Bolusky (at podium) offers the association's support of "oasis legislation" in Washington, D.C. At right is Indiana Congressman Jim Jontz, who introduced the act.

NURSERIES

Nurserymen like oasis ideas

WASHINGTON, D.C. — The American Association of Nurserymen (AAN) has come out in favor of the Urban and Community Forestry Act of 1989.

The bill has become known as "oasis legislation" because it supports the practice of tree planting to help cool urban areas.

Ben Bolusky, A.A.N. director of government affairs.

Move water the easy way... with an Otterbine® Floating Portable Pump

Just throw it in and start it! These self-priming pumps with built in strainers are made for quick starts and smooth running. Drain water from: ditches, sand bunkers, swimming pools, holding ponds — any flooded area! Irrigates and much more.

DEPENDABLE: Four stroke Briggs & Stratton engine means years of trouble free service.

PORTABLE: Can be operated by just 1 person.

EASY TO USE: No mixing of gas and oil, can be operated in just 3 inches of water.

HIGH VOLUME: Delivers pumping power WHEN and WHERE you need it!

Set it and forget it — the Otterbine Floating Portable Pump

This advanced controlled-release material derived from methylene urea polymers is the ideal nitrogen source for all your turf needs. That's because NUTRALENE™ works two ways. First, it provides a quick-release nitrogen through hydrolysis. Second, NUTRALENE releases nitrogen more slowly through microbial action for sustained feeding. This dual action (the result of its unique molecular structure) makes NUTRALENE the superior controlled release nitrogen source. The following points show that NUTRALENE meets all the professional’s requirements for a broad-use nitrogen.

This quality nitrogen source offers...

- Quick greenup
- Controlled-release nitrogen feeding for up to 16 weeks
- Both hydrolysis and microbial action—not dependent on coating or particle size for release
- Minimal leaching and volatilization
- Consistent release of all nitrogen in one growing season, under all conditions, even during cool soil temperature situations
- Low salt and low burning potentials
- 40-0-0 guaranteed analysis
There's a new name in the winner's circle at Doral

Taming the famed Blue Monster course is the only way a golfer gets into the winner's circle at Doral. It's no different for turf professionals. Steve Kuhn, superintendent for all five of Doral's courses, occupies a permanent spot. John Deere, a new name at this prestigious Florida resort, just moved in.

"I've used John Deere tractors before so I know something about their quality," says Kuhn. "Most of us in this business knew that when John Deere got into more specialized turf care machines they would come out with something good.

"I bought a John Deere 280S Aerator on the spot—which is unusual for me. Since then, we've saved time and money using it to aerate all five of our courses. We can finish a course in 10-12 hours now where it used to take us 3-4 days.

"We also use a 151 Vacuum to pick up clippings and debris around the hotel. I like the fact that it has its own engine, so we can pull it with any of our vehicles. It also has a filtering system that makes it less disturbing for our operators and guests."

Talk to your John Deere distributor today for more information on all we have to offer. Or write John Deere, Dept. 956, Moline, IL for free literature. We know, like Steve Kuhn, you're going to like what you see.
Here's broad spectrum protection that can wipe a whole lineup of insects right out of the picture: ORTHENE Turf, Tree & Ornamental Spray.

Cleared for use on a long list of trees and plants, ORTHENE is also cleared for turf insects— including mole crickets in Florida. With ORTHENE, one spray kills pests like tent caterpillars, whiteflies, Japanese beetles and thrips on contact. Also, use ORTHENE for lasting residual action against other insects from aphids to sod webworms.

ORTHENE kills both on contact and by systemic action. It makes the whole job of protecting lawns, golf course turf, trees, shrubs and flowers simpler, more convenient and more effective. Give yourself the edge against insects. Control them with ORTHENE Turf, Tree & Ornamental Spray.

Avoid accidents. For safety, read the entire label including precautions. Use all chemicals only as directed.

A.A.N. from page 22

fairs, said the bill was "strong, immediate action that communities can take to green up and cool off our cities, and a sound approach to restoring the health of our urban environments."

The bill, introduced by Congressman Jim Jontz (D-Ind.), will serve to complement the Global Releaf Program, a campaign to plant 100 million trees in American cities and towns by 1992.

The bill will promote tree planting in urban areas and increase research and educational efforts to improve the public's understanding of tree and forest ecology in urban areas. It also will provide for increased technical assistance and a competitive grants program to support urban and community forestry projects.

With A.A.N.'s backing, a large number of trees are expected to be acquired from private nurseries.

The association will also provide private nursery advice to the National Urban and Community Forestry Advisory Council.

AWARDS

NRVMA calls for 1989 nominations

CENTERVILLE, Del. — The National Roadside Vegetation Management Association has issued a call for entries in its 1989 Excellence in Roadside Vegetation Management awards program. The deadline for entries is July 15.

Established in 1985, the awards program recognizes the achievements of professionals who are responsible for vegetation management along the nation's roads and highways. Profiles of some of last year's winners appear in this issue of LANDSCAPE MANAGEMENT.

The competition is open to all individuals or organizations involved in roadside vegetation management. Entries may be submitted in one of two categories: roadside industry (state depts. of transportation and county or city road depts.) and roadside support (academic or industry contributions). Individuals may nominate their own operation or submit nominations on behalf of colleagues or business associates.

For additional entry details and a nomination form, write: NRVMA Awards Program, c/o McCullough & Assoc., P.O. Box 24, Eureka, IL 61530, or call (217) 356-9507.

EQUIPMENT

OPEI: Consumer mag went too far

ALEXANDRIA, Va. — The Outdoor Power Equipment Institute is not happy with Consumer Reports magazine's recent survey of lawn tractors.

"They went too far," says John Liskey, OPEI's director of statistical and technical services.

"They got a little bit of information and they just carried it to extremes."

The survey appeared in the consumer monthly's June issue. Twenty-two lawn tractors were tested for the report. All were 12-hp, with bagging attachments.

"Although some tractors go beyond the industry's voluntary safety standard requirements, the design shortcomings in other models heighten the risks inherent in any grass cutting machine," said the report.

For three models, the report determined it was too easy to kick the gearshift lever into gear accidentally when climbing on or off the tractor.

Weaknesses found in other tractors included: susceptibility to bucking and rearing; inadequate "deadman" controls; separate controls for speed and direction; slow stopping (3 seconds or more) blades; and noise pollution.

One of the Institute's major objections to the report was its stability test.

Future Farmers to emphasize turf

BLACKSBURG, Va. — The Future Farmers of America (F.F.A.) is planning to alter its annual contest for high school students to place more emphasis on the turf/landscape market by 1991.

“We have had insufficient emphasis in the turf area,” notes Dr. Alan R. McDaniel of Virginia Tech, the man in charge of the contest re-evaluation. “Today, agriculture is not your traditional crop and animal production. Only one person in six in the agriculture industry is directly related to food production.”

McDaniel says that the new emphasis on turf-related studies will definitely have an impact on the industry in the future. “It represents an introduction to horticulture, landscaping and turf at the high school level,” he says.

Helping McDaniel restructure the F.F.A. contest is assistant Frank B. Flanders of the University of Georgia. Also on the advisory board are Bob Brophy of Cushman; Richard Anderson and Ron Lytle of Kubota; Thomas Carter of Jacobsen; Andy Seckinger of Chipco Specialty Products; and Brian Corsini, Carl Meyer and Andy Klapis of the American Association of Nurserymen and the Wholesale Nursery Growers Association.

“The F.F.A. has noted a tremendous decline in students who want to study strictly agriculture,” says Brophy. “Most of the emphasis is now in urban horticultural areas. We gave them parameters of what the industry is looking for.”

MARKETING

Survey explores buying habits

OAKLAND, Calif. — Most California gardeners spend between $50 and $299 a year on garden supplies and plant material, according to the University of California Cooperative Extension.

The UCCE recently conducted a survey to determine the buying habits of home gardeners around the state.

The survey results show that gardeners who shop at full service garden centers spend the most money. Almost 54 percent of these shoppers spend $150 or more in an average year, while only 37.5 percent of those who shop at other businesses for their supplies spend that much.

The decorative value of gardening was ranked as the most important reason to garden.

Whatever sort of grounds you manage professionally, DIQUAT Herbicide H/A can help you keep them clean and trim. With its fast-acting formula, DIQUAT gives rapid burn-down, usually within 24–48 hours, of a wide variety of annual grasses and broadleaf weeds.

DIQUAT has a proven track record for getting rid of unwanted grasses and weeds, even under less-than-ideal weather conditions. A non-selective contact herbicide, DIQUAT will burn back or control nearly anything green to which it is applied.

To help DIQUAT work at its best, use X-77 Spreader (non-ionic). X-77 makes spray droplets spread quickly and evenly to coat waxy leaf surfaces for optimum performance.

Check the savings versus a more expensive application of ROUNDUP® DIQUAT does the job with a substantial savings! Get DIQUAT Herbicide H/A — and wipe out problem weeds, fast!

Avoid accidents. For safety, read the entire label including precautions. Use all chemicals only as directed. Copyright ©1989 Valent U.S.A. Corporation. All rights reserved. ROUNDUP® is a registered trademark of Monsanto Company.
Climb to the Top

with

Grazer

The Grazer Grounds Mower is the competitive edge you need to “climb to the top” with your business.

Just look at Grazer’s key features: effortless handling with zero-turning radius, deck design that allows for easy cleanout and serviceability, independent hydraulic motors to each drive wheel, quick-respond steering levers, full-floating deck clearly visible from the driving position, deck widths up to 72”, year-round service thanks to a variety of accessories, and more!

Let us show you how the Grazer Grounds Mower can give you the competitive edge you need to “climb to the top.” Call today for complete information!

Circle No. 128 on Reader Inquiry Card
ATHLETIC TURF

LOTS OF HOLES...Fifty-three cleat marks per square foot. That's what you should expect if you have a heavy-traffic football field. That's the number of holes put into a professional football field between the hash marks, according to Sports Turf Managers Association president Steve Cockerham. Of course, because the hash marks are closer together in professional football than in college and high school, that number would be high for most fields. The answer to these high-wear areas? "The new ryegrasses just may be something that we can consider as an athletic turf, at least here in Southern California," Cockerham said at an STMA meeting in Anaheim recently.

CHANGES FOR THE CHIEFS...Chip Toma has been named head groundskeeper for the Kansas City Chiefs, effective July 1. Toma takes over from his father George Toma, who will remain as head groundskeeper for the Royals and also consult for the Chiefs. George will also be doing more consulting and speaking nationwide. "I'm definitely going to finish my career with the Royals," he promises. "They've treated me like a king."

Chip visits the Orient in August to help the Asian Games Committee and conduct athletic turf seminars in Hong Kong and Taiwan. "China is hungry for information," says Chip. "They're competent people, and they want nice fields, but they don't yet have the know-how or proper equipment."

BRONCOS SEED NEW FIELD...If all goes well, the Denver Broncos' new practice field will begin to take seed sometime in mid-July. Ross Kurcab, practice field manager, will use a 70/30 blue/rye turf mix after construction crews install an underground heating system. "The bluegrass comes through the winter better," says Kurcab, "and the rye gives us the aggressiveness we need. Our goals for this field are safety and playability." The team expects to be using the new practice field and facility by March of 1990.

The mix includes Touchdown, Challenger, Columbia, 834, Del Ray and All*Star.

**PEOPLE**

**Setting standards**

GREENSBORO, N.C. — On this hot May day, there's more action going on outside the University of North Carolina Greensboro's Physical Activities Complex than there is within. The students left last week, while the construction crews remain, putting the finishing touches on the landscape of the new $15.7 million building.

Therein lies the problem.

Apparently operators of the contractor's large equipment have damaged four large, stately oaks adjacent to the building. The obliterated grade, excessive compaction, slit roots and chipped bark on the trees is serious enough to kill them.

Chris Fay knows this, and he's concerned.

"Look at the soil piled up along the base of this tree here," says Fay, pointing to the trunk of a 50-foot, doomed royal oak. "What happened to the original grade here?"

Fay, 31, has been superintendent of the grounds on this campus for a little more than one year. He joined the UNCG crew as a groundskeeper a decade ago. During his rise through the ranks, he has held just about every job in the department. He has also seen some beautiful trees laid to waste by harried contractors. Now that he has the authority, it's a sight that will no longer be tolerated.

Fay has armed the university with a nine-page Tree Protection Standard, which he authored, that details the lengths contractors must take to prevent injury to the thousands of beautiful trees that create the serene atmosphere students and university personnel enjoy here.

"People don't realize what happens to these trees after the job is finished. These trees will be here for maybe another five years. Then, all of a sudden, they're gone," says Fay, snapping his fingers. "It has taken people a long time to realize that it's the damage done now, during construction, that is killing them."

Fay's Standard calls for construction crews to set up barriers around a tree's drip lines. There are specifications for excavation, grading and fertilization. Even the designer's role is outlined: "It shall be the designer's full responsibility to insure that the contractor complies with the spirit and intent of this standard throughout the construction project."

In addition, Fay photographs trees before, during and after a construction crew has gone to work near it.

Because the Standard is so new, Fay hasn't attempted to enforce it yet. Still, he feels it is only a matter of time.

"I'm the guy that has to live with this after they're gone," he says, looking out across the landscape of the complex. Sometimes you've got to get downright ugly with people before they do the right thing. I say that if you can't go full speed ahead in protecting the tree—if you're going to end up changing the grade around its base, cutting extensively around the roots—take the tree down and put a new one in."

If you're a tree on this campus, you're sure to feel Fay's Standard's impact.

**Where's the water?**

EAGAN, Minn. — Meanwhile, out in the upper Midwest where they still hadn't had much water this spring, Tom Mann of The Caretakers is bemoaning the market.

"There's going to be a lot of fallout from the drought this year and next," he says. "We're really minus on rain, and the 30-day forecast calls for us to remain dry."

Mann escorted reporters around parts of suburban Minneapolis/St. Paul, where dead and dying grass and trees were evident.

As a matter of fact, The Caretakers put a good bit of change in the coffers last fall by hauling water from Eagan (which is supplied by an aquifer) to other less fortunate suburbs. "Most of our properties are irrigated, so we spent last June 15th to August 21st hauling water," Mann notes.

Yet, competition is changing rapidly with the addition of a new I-494 bridge linking the fastest-growing suburbs of the Twin Cities.

Eagan's growth itself is attributable to the nearby international airport. "We've got lots of corporate headquarters around here, yet it's getting tougher all the time," says Mann, a former president of the Minnesota Professional Lawn Care Association. "When the bridge opened, that meant a lot of competitors came marching into the area."

He says that dealing with problems associated with the lawn care/lanscape business are sometimes discouraging, despite having strictly corporate accounts.

"We feel we function best with a corporate-type client," he says. "The client needs the help. Plus, you have a height of flexibility."

What is the main ingredient still missing from Minnesota landscapes? Color.

"We're basically green on brown. Sophisticated landscapes are a rare bird around here. We sorely need a few companies to add color to their environments."

And when that time comes, The Caretakers will be there.

—Will Perry

**Using the ballfields**

EDEN PRAIRIE, Minn. — Not far from Mann's operation lies the quiet yet thriving community of Eden Prairie. And because this, too, is a fast-growing area, John Skranka, landscape manager for the entire school system, has his hands full: 240 acres, eight building sites, eight soccer fields, four football fields, three baseball fields and four softball fields.

But he's got an ace in the hole:
One look tells you. A golf course just doesn't reach this level of beauty and playability without effective control of turf diseases.

Like large brown patch. When tees, greens and fairways come under its attack, things can get u-g-l-y.

Unless you attack back—with Rubigan, tank-mixed with a contact fungicide (Daconil 2787® Chipco® 26019, or a thiram product).

This adds even more knock-down power to Rubigan's extended disease control. Just one application can clean out even a heavy presence of brown patch for 10-14 days.

One Rubigan treatment also can keep your course dollar spotless—up to 28 days. One case of Rubigan will treat up to 4 acres of greens and fairways. It gives you powerful preventive action against anthracnose too.

This year, make Rubigan your foundation fungicide. Find out how quickly large brown patch and 13 other common turfgrass diseases find themselves overmatched. See your Elanco distributor. Or call toll-free: 1-800-352-6776.

Elanco Products Company
A Division of Eli Lilly and Company
Lilly Corporate Center
Dept. EM-455, Indianapolis, IN 46285 U.S.A.

Rubigan®—(fenarimol, Elanco)
Daconil®—(chlorothalonil, Fermenta Plant Protection)
Chipco®—(iprodione, Rhone-Poulenc)

Extends brown patch control up to seven days when tank-mixed with a contact fungicide.

Circle No. 116 on Reader Inquiry Card
Eden Prairie park supervisor Wes Dunsmore.

"We work closely together," notes Skranke. "We borrow his equipment, he borrows ours. We do a lot of sharing ideas and probably see each other a few times a week."

Skranke also has another ace: he's a member of the city's volunteer fire department. And that means that when he needs a basket truck for off-the-ground work, one is available.

Because of the fast-growing area, money for new projects is not hard to come by.

"We're going to open up another school and have a ground-breaking on another," says Skranke. "We're remodeling the high school and putting in a new varsity football field."

But talk about your high-traffic areas—Eden Prairie's got them!

"Right now, the city's big on soccer," Skranke relates. "So we're letting them use six fields at the high school. Those fields are used two hours a night, six to 10 hours a week. The other ones at the high school are used another four hours a day.

"We have a problem scheduling seeding. We're going to pull two fields out of use when school's out for seeding."

Since one of the new schools is going up on the former site of Northrup-King Seed Co. test plots, he still gets consultation from people there. He uses Northrup-King Athletic Pro seed mix for most of the fields with Par-Ex fertilizer.

Skranke also swears by a new John Deere AMT-600 utility vehicle that supplements Jacobsen and Gravely mowers. Irrigation equipment (all fields are irrigated) is mostly Toro with some Buckner and Hunter.

"We're a lucky-type district because we're growing," Skranke, a 14-year veteran admits. "If we weren't, it'd be a lot harder to get the equipment and sprinklers."

—Jerry Roche

Jacklin Seed Co. has named Wade Blowers research assistant of the warm-season grass seed breeding program. He will also be involved with production research.

Henry Donselman, Ph.D., has been named vice president, director of research of Rancho Soledad Nurseries, Inc. He will oversee new research and development in plant production, coordinate the acquisition and testing of new ornamental plants, work closely with Ranch Tissue Technologies (the nursery's tissue culture division), oversee the production of palms and other tropics in Hawaii at Palms of Paradise (the nursery's tropical interior plant nursery) and be available for consulting in landscape and interior-scapes installations.

The first five inductees to the National Landscape Association's Hall of Fame are: Dr. J. Franklin Styer, former owner of J. Franklin Styer Nurseries, Concordville, Pa., Harold Hunzicker, of Hunzicker's, Inc., Wellington Kennedy, of The Kennedy Nursery, Inc., Dr. Richard P. White, former executive secretary of the American Association of Nurserymen and Dr. L.C. Chadwick, author of the association's Landscape Newsletter in 1945 and 1946.

Mark W. Beliczky has been named director of marketing at Lesco, Inc. Beliczky was formerly associated with ChemLawn Inc.

One of the nation's first interior landscape contractors, Robert Herrick Carter, recently died of cancer. He was 69.

Carter, former owner of Van Herricks Environmental Planting from 1946 to 1987, is credited with pioneering the use of flowering plants and trees in commercial developments in southern California in the mid 1940s. Carter is survived by his son, Robert, daughters Nancy and Catherine and two grandchildren.

Riverdale Chemical Company's new regional sales manager is Lonnie M. Pell. Pell will be responsible for the company's sales activities in the southeastern portion of the United States.

Martha Hill, landscape technology instructor for Hinds Community College in Raymond, Mississippi, was installed as president of the American Society of Landscape Architects. The Nebraska Turfgrass Foundation elected new officer and directors at its recent conference. The re-elected officers include Larry Hergott, president, Hans Bross, vice president, and Twyla Hansen, secretary-treasurer.

Newly-elected board members are Steve Paustian, Hans Bross and Carlos Stimson.

The new executive vice president of operations for Chapel Valley Landscape Company is Stewart Rom. Rom is the newly-elected president of the Landscape Contractors Association for Baltimore, Washington, DC, and northern Virginia. Also promoted were Paul Drummond to manager of business development, Bruce Phillips to Virginia landscape department manager and Charles Wheaton to Maryland maintenance department manager.

Clemson University Extension Service horticulturist John Kelly has been honored by two horticultural organizations.

The American Society for Horticultural Science recognized him as an outstanding young educator and the South Carolina Nurserymen's Association presented him with an award for outstanding service to the state's nursery industry.

Ken Jenner, co-founder and third executive director of the California Landscape Contractors Association, died Jan. 29 in California. He was 83.

Jenner began in the landscaping industry in the 1940s and participated in the organizational committee that created the CLCA in 1951. As the groups part time executive secretary, Jenner's first budget was under $2,000. When he retired in 1972, CLCA had a budget of nearly $250,000.

During his tenure, CLCA established its Trophy Awards program, offering health insurance to members, launched a public relations program, opened a second office in southern California and published the book Landscape Management by James W. Griffin. Jenner is survived by his wife Betty, daughter Joan Rowles, grandson Michael Sewell and brother Theodore H.
Cut aeration labor by 75 percent.

Introducing the new Cushman Core Harvester® attachment.

Now one person in a Turf Truckster® vehicle can scoop up, load and dump aeration cores in the same time it takes three workers with shovels. In fact, with the revolutionary new Core Harvester attachment, you can clean up an average 7,000 sq. ft. green in about 15 minutes — two to three times faster than you’ve ever done it before.

As gentle as it is quick.
The Core Harvester’s unique spring-balanced parallel link flotation system protects your fine turf from scuffing. Because they float, the Core Harvester’s gathering blades automatically adjust to undulating greens for quick, gentle operation.

The Core Harvester attaches easily to Turf Trucksters, and retrofits 1985 and newer models. After the Core Harvester has been attached, it’s easy to take off by just removing four bolts, two hoses, and you’re ready to go.

There’s nothing else like it on the market today. The new Core Harvester, only from Cushman. For a convincing demonstration on your course, contact your Cushman dealer today. Or call toll free: 1-800-228-4444.
The Best of the Roadside

When the National Roadside Vegetation Management Association held its conference last fall, it named annual contest winners. Here are brief profiles of three outstanding programs.

The use of wildflowers along North Carolina’s highways wasn’t implemented as a cost saving measure, says Bill Johnson of the state’s DOT. Their purpose is simply to bring color to the roadway.

Innovation in N. Carolina

by Jerry Roche, editor

landscape engineer Bill Johnson and the North Carolina Department of Transportation took the NRVMA award in the state/federal category. Johnson, one of the founders of the NRVMA, likes to think of himself on the cutting edge of the industry.

“We try to be innovative,” he notes. “We try to do things first, change things, look at new programs. We really react well to public sentiment and public influence on our program.”

One of Johnson’s pet projects is his wildflower program.

“There was a lot of interest in wildflowers. We reacted quickly. We seem to have been a little more blessed with resources than some groups across the nation.

“The wildflower program is probably the most popular thing I’ve ever seen happen in DOT. It’s more popular than roads, really. The response is overwhelming. It’s a visible change.”

Johnson said he heard his boss speaking to a group recently, saying that he’s been complimented on four things—and three had been on the wildflowers.

“We can’t save money using wildflowers,” Johnson continues. “That was not its purpose. The purpose was to add color to the roads, to improve aesthetics, to give an interest that is fairly low-maintenance.”

What is spent on the wildflower program—and more—is saved by implementing plant growth regulator and low-volume herbicide spraying programs.
"We have documented cost savings on both of those," says Johnson. "The wildflower program is about $250,000 a year. The other savings are considerably more than that."

Controlling vegetation in North Carolina is no small task. The 400-person Landscape Unit maintains 285,000 acres of routinely-mowed vegetation and nearly 300,000 total acres with reforested areas included. This acreage is among the nation's largest state-maintained highway system with more than 76,000 miles of roadways.

Because of its location smack-dab in the middle of the transition zone, the state DOT maintains a good working relationship with North Carolina State University, especially Dr. Joe DiPaolo (who made the NRVMA award nomination). DiPaolo has done research on turfgrass species that has saved Johnson some money.

DiPaolo, in his nomination letter, notes a 50 percent savings in roadside vegetation control in North Carolina with the use of maleic hydrazide or mefluidide + chlorsulfuron as growth regulators on tall fescue.

"In 1971, fescue was used into the ocean and was certainly not adapted to a large part of the state," observes Johnson. "We now use three different warm-season grasses. We also use regular Kentucky-31 tall fescue, bluegrass and some of the hard fescues in our cool-season mixes. Centipede is a warm-season material that we're very interested in. It's shown some adaptation into the cool-season areas because of its low maintenance. It's really a no-mow type of material."

And how's this for planting? In preparation for the 1987 summer Olympic Festival, the DOT planted an unbelievable

"The wildflower program is probably the most popular thing I've ever seen happen in DOT," says Bill Johnson of the North Carolina DOT.

53,000 dozen annual flowers, 2,100 junipers, 1,900 crepe myrtles, 1,000 pampasgrass plants, 5,000 daylilies and 28,000 cannalilies along 20 interchanges—in six months.

Finally, one more new program with which the DOT is experimenting involves the state's Wildlife Resources Commission. Recognizing that roadides serve as a linear wildlife refuge, a pilot project provides roadside feeding areas for small game.

"An added benefit is that this should reduce our maintenance costs," says the ever-frugal Johnson. "We want our roadides to be more attractive to people and an asset to wildlife as well. From these projects we will be able to develop a program that could receive wider application in the future.

Two decades of control

Ray Dickens, Ph.D., professor of turf management at Auburn University, was presented with the NRVMA's award in the academic category in appreciation of two decades of service to managing roadside vegetation.

Dr. Dickens initiated and developed Auburn's first course in turfgrass management soon after joining its academic staff in 1968. Today, as the primary consultant to the Alabama Highway Department, he remains among the pioneers doing effective research on managing roadside vegetation.

His early work showed the effectiveness and economy of weeping lovegrass as a temporary cover when seeded in a seed mixture. At the same time, he was helping identify the areas on which crown vetch, an attractive cover, is adapted.

Dr. Dickens also provided the research needed to select Sericea lespedeza adapted for acid road cuts. This cooperative work resulted in the release of two cultivars recommended specifically for highways: Interstate and Interstate 76.

Dr. Dickens' recent research on highway vegetation has emphasized chemical growth control, particulary MSMA and 2,4-D, in lieu of mechanical mowing. Dr. Dickens' cost-effectiveness studies of fan-cage sprayers compared to other application methods is indicative of research that has resulted in a sharp drop in maintenance costs for the state of Alabama Highway Department.

Dr. Dickens' research is largely re-
Dr. Ray Dickens, of Auburn University, has been instrumental in Alabama's roadside management.

Dr. Dickens' 1978 study of several roadside mulch materials showed that seedling establishment is increased by adding cellulose, excelsior, or other mulch materials to erosion control nettings. He also showed that incorporating plant nutrients into the adhesive appears to be an acceptable method of applying fertilizers to mulched areas.

Dr. Dickens also aids in writing and interpreting construction specifications and arbitrating conflicts between contractors and the state highway department.

Bill Tidwell, winner in the county category, is the supervisor for EMA/Public Works for Orange County, Anaheim, Calif. Originally a park ranger, Tidwell has steadily progressed up the educational and professional ladder. He earned his masters degree in environmental studies, and holds lifetime teaching credentials in ecology and agriculture.

Tidwell's division is responsible
CHIPCO® SEVIN® brand SL carbaryl insecticide consistently demonstrates effective control of the most damaging species of white grubs. Plus control of 29 other destructive turf pests—including sod webworms, chinch bugs and bluegrass billbugs. It even provides dependable control of more than 86 insects known to attack trees, shrubs and ornamentals.

And CHIPCO® SEVIN® brand SL carbaryl insecticide gives you all this control at a cost of only about one dollar per 1,000 sq. ft. But the advantages don’t stop there. CHIPCO® SEVIN® brand SL carbaryl insecticide is ideal for control of nuisance pests such as ants, fleas, ticks and mosquitoes that thrive around the perimeters of your course. And it’s easy to apply. There’s no need for special protective clothing, no odor, and play can be resumed as soon as the spray has dried. CHIPCO® SEVIN® brand SL carbaryl insecticide is low in toxicity to fish, and other formulations of SEVIN® brand are used for control of pests on household pets, poultry and some game birds.

When you add it all up, is there really any other choice in grub control?

Chipco® Sevin® SL
Brand Carbaryl Insecticide

As with any crop protection chemical, always read and follow instructions on the label. CHIPCO is a registered trademark of Rhone-Poulenc. © 1989 Rhone-Poulenc Ag Company CHIPCO SEVIN is a registered trademark of Rhone-Poulenc for carbaryl insecticide.
for managing all vegetation, including trees, brush, noxious weeds, grass and litter on all county-owned land. This includes 813 miles of county-owned roadway; 303 miles of flood control channels, basins and drains; 15,000 acres of park land and a few hundred thousand landscape trees. The total area adds up to 26,000 acres.

Aesthetically, Tidwell's "Weed Busters" crew has kept up with county development and growth. The unit has managed to keep the areas under its jurisdiction attractive despite the hazards of a roadway system which operates at near rush hour volume all day long.

"The road shoulders are kept free of weeds with a program of tank-mixing a post-emergence and pre-emergence herbicide to keep weed seeds from germinating while controlling existing weeds," says Tidwell. "The county is using low maintenance landscaping instead of high maintenance exotic plants which require constant care, minimizing the time the crews must spend on the well-traveled highways."

Tidwell says Orange County's pesticide section excels in the areas of application and applicator safety. Pesticide use is regulated by agri-cultural commissioners in the state, however, because the county is a public agency, the management has directed the goup to comply with all Cal-OSHA safety requirements as well, says Tidwell. Notable is the fact that all personnel in the section have a state applicator's license, and all suspected groundwater contaminants were removed three years before the passage of Proposition 65.

For extra added innovation, Orange County uses a high-line boom for certain applications. The unit's spray crew can treat a 14-mile long, 300-foot wide stretch of flood control channel in 12 hours. On-board computers are also used in the trucks to track scheduling and progress.

Perhaps the most innovative aspect of Tidwell's operation is the use of computerized herbicide recommendation inventories which include roadways, flood control channels and parks. These recommendations are used to schedule activities, document use and order materials. It is combined with the vegetation section of a Maintenance Management Plan that is used for all the county's public works operations. This information allows the manager of public works to determine that all functions are staying on course and on time while staying within the budget for that activity. "Research of this current information allows excellent forecasting for future budgets," Tidwell explains.

ED. NOTE: Mayor Jerry E. Abramson of Louisville, Ky. and the city of Boca Raton, Fla. tied for the NRVMA award in the municipal category. They were not included in this installment because of space considerations, but will be noted in future issues of LANDSCAPE MANAGEMENT. LM

---

**BROUWER HITCH-HIKER**

For fast, convenient on-site unloading take along your own unloading system! Place the pallets where the truck can't go, and get fast turn-around...for those extra loads per day.

Some outstanding features:
- Dual rear-wheel drive for exceptional traction in the worst conditions - empty or loaded.
- Kubota 3-cyl. diesel gives ample power, superior durability and economy.
- 8 in. side-shift for easy positioning of the load - up to 3500 lbs.
- Single pedal forward/reverse control.
- Quickly and easily attached/detached to/from truck.

For more information contact your Brouwer dealer...TODAY.

For centuries, Japanese gardeners have collected and cultivated trees and shrubs that have been dwarfed by nature. By carefully pruning, and training, they produced a miniature copy of nature — captured in perfection.

Inspired by the mysteries surrounding this ancient craft, and cognizant of the desirability that dwarf features would bring to the professional turf grass grower, TMI has developed Bonsai. This double dwarf, turf type tall fescue is shorter, finer and darker than any other commercially available variety.

Bonsai has more tillers per plant...a profusion of tillers at low angles that results in a turf of greater density, even at lower seeding rates. This true dwarf fescue possesses an extremely high endophyte count for increased insect tolerance and contrary to popular belief, Bonsai has drought tolerance equal to or better than any other tall fescue. Bonsai's darker color means you will use less fertilizer to maintain a dark green turf. And, its dwarf growth habit requires much less mowing than any other tall fescue you can buy today.

Less maintenance, less fertilizer, less mowing...now you can enjoy the perfection of the ancient masters in your own corner of the world...with Bonsai!
For years, medical science has known that to achieve the most effective control, different diseases often require differing methods of prescriptive treatment. Yet only now, with Banner®, are you finally able to gain the same sophistication in the prevention of diseases on turf. Because Banner is a truly unique systemic fungicide.

With a broader spectrum of control and a more efficient method of treatment than any other yet devised.

Instead of one indiscrim-
You treat each disease on its own turf.

Rates that, in many cases, are lower than those that are required with other turfgrass fungicides.

Which means Banner isn't just an intelligent way to effectively prevent disease, it’s an intelligent way to prevent spending more than you have to.

Breeding lessened the amount of coarse fibers in tall fescue and retained and improved its tolerance to heavy traffic. The newer turf-type tall fescues are, in almost every regard, superior to the pasture-types.

TALL FESCUES FOR DRY, URBAN LANDSCAPES

Successful breeding and selection programs of tall fescues have produced the turf needed to fill in the hot, dry, low-maintenance landscapes where bluegrass often fares poorly.

by Bob Morris and John Van Dam

Of the cool-season grasses, tall fescues have become a frequently-planted species for year-round green color in dry urban landscapes.

Originating in Europe, fescues were first introduced as pasture grasses. Gradually, five varieties were developed and used for turf purposes.

Kentucky 31 and Alta are excellent choices for areas that need a year-round green turfgrass cover but do not necessarily demand a high level of quality.

With the expansion of the turfgrass industry, there arose the challenge to develop turfgrass varieties that looked good, were heat tolerant and were capable of survival in dry, urban landscapes. Turfgrass scientists and breeders, attempting to fill the void, turned to the heat and drought tolerant tall fescues. They were known to grow on marginal and heavily compacted soil and sustain themselves at lower levels of nutrition than most other grasses.

In addition, tall fescues are relatively pest-free in low humidity areas. Their good shade tolerance ranks them superior to any other choice. They are recognized as the cool-season grasses most likely to persist in hotter, dry regions of the United States.

Tall fescues do have limitations to their heat tolerance. They have not performed well, historically, in the Palm Springs area where a combination of very hot temperatures for extended periods have caused them to fail. At the opposite end of the thermometer, tall fescues have failed during the winter months in the northern U.S. where temperatures have dropped to sub-zero without a protective snow cover.

Because tall fescues are cool-sea-

A closeup look at leaf blades of Kentucky bluegrass (left), perennial ryegrass (right) and pasture-type tall fescue. Pasture-types were originally developed for animal grazing but found acceptance in less expensive, low maintenance landscapes.
You'll quickly notice Mustang's finer texture, rich dark green color and dense, uniform turf—and you'll understand why we say Mustang has bluegrass-like qualities.

But there's more to Mustang turf-type tall fescue than beauty; it's tough and durable. It's heat and drought tolerance, winter hardiness, and ability to endure low mowing heights are remarkable. Mustang even shows improved resistance to *Helminthosporium* netblotch and many other diseases.

Best of all, Mustang is practical, because it performs extremely well under low maintenance conditions like minimum fertilization, watering and mowing. National tests and actual applications in parks, golf courses and playing fields have proven it.

That's why Mustang is becoming the favorite choice of professional turf managers, over K-31 and many other commercially available varieties.

For bluegrass qualities and tall fescue practicality, use the professional's choice—Mustang turf-type tall fescue.
ESTABLISHING A TALL FESCUE LAWN

Like other cool-season grasses, tall fescue lawns can be started from seed. The following suggestions will improve the chances of obtaining a successful, high quality stand:

- Even though tall fescues perform well on poor quality soils, they perform better if the soil and seedbed are well prepared to maximize the potential for a stand of high quality.
- Pasture-type and turf-type tall fescue seed should never be mixed for the same turfgrass area. There are some advantages to blending different varieties of tall fescue.
- The preferable time to seed tall fescues in dry climates is in the fall. Spring seeding is the acceptable second choice. The fescue varieties are slower to germinate than perennial ryegrass but faster than Kentucky bluegrass.
- Tall fescue seedlings are relatively slow to mature and establish. Following seeding, traffic should be kept to a minimum until the stand becomes established.
- Low-impact landscapes are usually seeded at six to eight pounds per 1,000 sq. ft. (260 to 350 pounds per acre). The rate for high impact landscapes is eight to ten pounds per 1,000 sq. ft. (350 to 435 pounds per acre). If the area to be sodded, the fescue selection must be turf-type, since the pasture-type is not available as sod. Sod can be purchased either as a blend of several turf-type varieties or as a mixture of Kentucky bluegrass.
- Sod producers generally mix tall fescue seed with a mildly aggressive Kentucky bluegrass, at a rate not exceeding five percent by weight. This is to give the sod strength, improve the sod’s recuperative potential and make it easier to handle during installation. Some of the bluegrasses used include: Baron, Merit, Ram I, Nassau, Columbia, Adelphi and Parade.

Maintenance of a tall fescue turf stand after seeding or sodding is similar to that of any cool-season turfgrass. Deep and infrequent irrigation will encourage a deep root system and enable the stand to persist during periods of stress.

Fertilizer applications may be at lower rates and at reduced frequencies in contrast to those for other cool-season grasses, yet the grass will maintain good color. Herbicide applications should be restricted until the seeding grasses have been mowed at least three times.

Tall fescue lawns are slow to mature so traffic should be kept to a minimum throughout the entire establishment period.

Disease problems on newly seeded lawns generally relate to over irrigation. Frequent watering on slow-draining soils may cause the new lawn to die back in isolated patches. Scheduling deeper, less frequent irrigations usually remedies the problem without the use of fungicides.

—The authors □

Turf-type tall fescues

Turf-type tall fescue cultivars represent recent advancements in turfgrass characteristics over the pasture-types. Breeding and selection programs begun in the early 1960s centered on developing fine-leaf textured fescue cultivars that also contained the many favorable characteristics of tall fescues. This breeding effort produced more than 40 varieties, the first of which was released in 1979. Now, a second generation of turf-type tall fescues has been released, as represented by the introduction of Jaguar, Bonanza, Rebel II, Arid, Apache and Monarch. This new, second generation has shown some very significant and dramatic improvements over its predecessor.

New and improved

While some turf-types have performed better than others, all have demonstrated marked improvements over pasture types (table 3). When grown side-by-side with pasture types, turf-type varieties have a darker green color, finer texture and denser appearance. This gives the turf an appearance that closely resembles Kentucky bluegrass.

As the turf matures, the stand begins to thin due to losses from crowding, insects, disease, mechanical injury and normal plant senescence. As with pasture-type tall fescues, turf-types are also bunch grasses. They do not spread to fill in open or weak areas like the rhizomatous bluegrasses are able to do. These areas, consequently, must be repaired by reseeding or resodding. Again, an annual overseeding in the fall will help to maintain the turf as an attractive sward.

Even though tall fescues are relatively pest-free, some diseases are still problems. Diseases such as pythium, brown patch and leaf spots still exist. The newer varieties have shown improved disease resistance. In addition, the newer tall fescues are quite shade tolerant.

In the past, one serious drawback to the use of tall fescues was their appearance after mowing and trimming. The cut ends of the tough, fibrous leaf blades turned brown and ragged. With newer turf-type vari-
Surflan. Roundup. Mix them together, and you’ve got control that knocks weeds down and keeps them down. Three times longer, in fact, than Roundup alone.

That’s what landscapers all across the country are now finding. They are getting better weed control and more satisfied customers. And they’re saving time and labor costs because they’re applying just once.

With a Surflan/Roundup tank-mix, you get complete control of over 50 different weeds—including such tough species as crabgrass, barnyardgrass, chickweed, spurge, johnsongrass and foxtail. And Surflan won’t harm your nearby landscaped areas, either. It works with little or no lateral movement.

Join the growing list of satisfied users. Add Surflan to your Roundup and stretch your weed control three times longer. See your Elanco distributor for Surflan. Or call toll-free: 1-800-352-6776.

eties, this problem is substantially reduced. Breeding lessened the amount of coarse fibers but retained and improved their tolerance to heavy traffic. The newer turf-type tall fescues are, in almost every regard, superior to the pasture-types.

**Landscaping with fescues**

In general, tall fescues are extremely well suited for landscape and recreational areas where water availability and quality is not a problem, low maintenance is desired, appearance is not of prime concern, and establishment and maintenance costs must be minimized. They are an excellent choice for athletic, play and recreational areas, commercial landscapes, low maintenance parks or other areas where the grass is subject to a great deal of traffic. LM

MEET THE PRO

EXPEDITE by Monsanto
**PROfessional system of solutions**

Expedite provides a complete pesticide delivery system, consisting of specially formulated, premixed pesticides and an application lance. Designed to solve a variety of application problems with ease and convenience, Expedite offers professional results through an advanced spray application technology. Additional chemistry is being developed to expand the Expedite product portfolio.

**PROgrammable control and accuracy**

Easy-access controls on the Expedite lance let you adjust swath width, droplet size and flow rate for precise, accurate spraying. Two application discs let you match spray patterns to varying situations. Plus, the built-in pacer control allows for consistent walking speed and accurate calibration. It all adds up to efficient, low-volume spraying you can program for superior performance.

**PROmotes effective weed control**

Both the Expedite grass and weed herbicide and broadleaf herbicide are specially formulated to provide effective control of labeled weeds. And the visible spray pattern lets you see exactly where you’re spraying for improved accuracy. As a result, you can count on Expedite for general trimming and edging, spot treatments and broadcast applications.
PROfitability improves
Cost-effective Expedite lowers your expenses by making spraying a fast, efficient, one-man operation. Downtime is substantially reduced and so are additional equipment and application costs. The premixed chemicals are designed to eliminate mixing errors and waste for even more savings.

PROductivity increases
Expedite puts an end to time-consuming stop-and-start spraying. There's no mixing, measuring, water hauling or pumping. In fact, one 5-liter pack of Expedite pesticide covers up to one acre—the same as refilling a 3-gallon backpack sprayer 28 times! Just hook up, prime and spray—faster and farther than ever before.

PROtects your workers
Expedite provides a closed system, and is designed to reduce worker exposure to pesticides. Ready-to-apply formulations come in specially designed 5-liter cartons that fit right into the backpack, so there's no exposure from mixing. Cleanup is simple and easy. And the lightweight Expedite lance and backpack minimize worker fatigue.
**EXPEDITE**

**THE PROFESSIONAL SYSTEM FOR PROFESSIONAL RESULTS.**

The PROfessional system

Expedite provides a pesticide application system with everything you need for professional spraying.

- Rechargeable Battery-Powered Lance
- 2 Application Discs
  - Serrated — for broadcast spraying and banding (12''-36'' swath)
  - Square — for trimming, edging and spot treatments (6''-24'' swath)
- Disc Ejector Tool
- Calibration Cup
- Backpack
- Battery Recharger Pack
- Pesticide and Cleaner Formulations

*We PROMISE*

Our **90-DAY GUARANTEE** assures a full refund if you're not satisfied with Expedite equipment or pesticides. In addition, our **ONE-YEAR WARRANTY** covers all Expedite lance parts and repair costs for one year from the date of purchase.

Meet the PRO today!

Solve your pesticide application problems like a pro, with the new system of solutions: EXPEDITE.

In 1981, ambitious contractors and architects, realizing that growth required mutual respect and cooperation, drew up new plans for progress. Have things changed for the better?

By Terry McIver, associate editor

The early 1980s was a period of reflection for professional landscaping. Forward-thinking landscape architects and contractors met to examine the state of the industry. They realized some changes were in order, and made recommendations to their respective memberships.

The annual Associated Landscape Contractors of America (ALCA) "Crystal Ball Conference" of 1981 resulted in "To Serve the Client," a joint report by ALCA and the American Society of Landscape Architects (ASLA). It revealed that too often architects and contractors suffered from lack of leadership and apparent mutual mistrust.

According to the report, "the landscape contractor has exhibited something of an inferiority complex in his relationship with landscape architects." The architect was considered timid, behind the times and lacking in forceful supervision.

Where to improve

Improvement would depend on the actions of both groups. The landscape architect, the report read, must "...forcefully vocalize his leadership responsibility in the industry." The contractor must "assist in promoting the landscape architect generally and on a project basis, either as a private landscape architect or as part of a design/build team."

Is today's landscape architect a better leader than he was 10 years ago? And is the contractor more apt to accept and appreciate the architect's craft?

Tom Lied of Lied's Nursery Company, Inc., Sussex, Wis., was on the 1981 committee. He says leadership by landscape architects has improved in the country's more progressive areas, such as on the coasts and in certain Chicago-area markets. "These are the pacesetters when it comes to accepting the landscape architect as an important part of what they do," he says.

According to Lied, landscape architects in these markets have benefitted from the progressiveness of those homeowners and developers.

Lied believes there is a prolifera-
Step 1: commnicate. Dave Kull, right, president of Regional Land Systems, discusses plans with company vice president Howard Reynolds.

been made in materials or design.

"If the owner has contacted a landscape architect, give him total supervision of the project."

Harry Kobzeff, president of Kobzeff & Associates, Irvine, Calif., finds that his plans are changed all the time, and says it's "extremely frustrating for an architect who spends a lot of time trying to get things together and to work, then goes out into the field and finds that the contractors are either too busy or too unsophisticated. So they look at the plans and get a general idea and then do it their way."

Architect Walt Young, president of Walt Young Associates, admits that a set of plans may not be as good as they should be. "As far as where some of these problems occur in the field, it probably does start with the plans," he says. But if there's a question, they (contractors) should call us."

Experience adds up
Young also realizes that some architects probably have not had as much field experience as certain contractors, so they don't understand how things have to be done.

The solution, once again, is to communicate. "It's very important that there are meetings, and each one understands the other's ability."

"Most of the time," relates Dave Kull, president of Regional Land Systems, Irvine, Calif., "the only time we architects deal with a contractor is if there's a problem. This leads to animosity. There's very little opportunity to interface if there's a problem. We need to build the rapport, to let each one know the other's qualifications. When you deal with people only on a crisis basis, it determines your mindset that way."

"Contractors need to commu-
The NEW Model 3500.
The most advanced 35-HP-class all-hydraulic trencher available. It's easy to use. Simple to maintain. Dependable. And won't fade in the stretch.

The NEW 3500:
You've never had it so easy.

Take a new look at all-hydraulic trenching. It's never been easier than with the new 3500. It's so advanced, it's actually simple. Simple to operate, simple to maintain, and easy to be productive.

The 3500 is the most advanced trencher in its class. With easy-to-use controls. Innovative, cool-running hydraulics. A powerful, efficient digging chain drive. And absolute minimum daily maintenance.

tion of design/build firms in the areas where the architect's image has been bolstered by the general public.

"This," explains Lied, "enables or requires the progressive contractor to build his own staff to serve his clients in an appropriate manner."

Barry Thalden, a private landscape architect in St. Louis, says that during the past eight years clients have become much more familiar with the role of the landscape architect. "As they have worked more with them, their comfort level with that leadership has increased.

**PRESERVATION DEPENDS ON SELF PROMOTION**

Apart from what they do to get along with each other, architects and contractors have to be concerned with how they get their message across to the public. Professionals from both groups say part of the struggle for success comes from lack of visibility and image.

What they say:

**J. Landon Reeve IV:** "The market is more competitive. Companies that are more aggressive in marketing are getting the best shot."

**Lydia Paneri** of Associated Landscapers, Inc., Irvine, Calif.: "We've realized that no two pieces of association literature look the same. We want to make it instantly recognizable as ALCA. Although we hope our members will ascribe to a certain level of ethics, there is no way to say that because they are in ALCA they are a good contractor."

**Dave Kull** of Regional Land Systems: "The industry has to do a better job of educating clients and prospective clients of what architects do, why it's important and what it costs. Until there is adequate money out there it's not going to change. Unless a developer understands what his landscape costs are going to be when penciling out his development, and includes those costs in his budget, there's not going to be a lot of change.

"Some people who attend our class on architecture realize the work we do, tell us we're worth every penny, and ask us to do a job for them. We also started teaching at the university, which gives us credibility as professionals.

"Local newspapers call us occasionally for information on what's new in the industry. All those things are subtle and don't cost much."

"We're all trying, to reach those clients who want award winning designs."

—Terry McIver □

More opportunity

"Opportunities for landscape architects continue to grow," says Thalden. "Many practice in areas such as planning, historic preservation, administration, research or education where a built project is not the final project."

A disciplined design/build firm is invariably led by the architect. As a multi-disciplined firm, Lied's operates a professional land planning office to serve its professional clients. A design/build staff serves professional clients in the design/build mode, and a retail design staff deals with clients on the retail landscape level. "We cover the market, but try not to confuse the issue by believing that one service is equal to the other," says Lied.

A change in plans

A typical complaint of landscape architects—and one which can be used to symbolize the way the two get along—is that contractors alter the original plans without first consulting with the architect. Either the architect can't be reached, or the contractor quite frankly believes he has a better—or less expensive—idea and doesn't need to inform the architect of the change.

Some contractors will substitute materials to save time or money. As one contractor puts it, "as long as there's no one looking over their shoulder to make sure it's done to spec, they basically take the specs and throw them out the window. Once it's underground, who's going to know?"

The architect has a right to see his plans fulfilled as close to what he has drawn, just as a contractor has a right to submit a bid. In an age of advanced communications, failure to confer prior to a plan change is inexcusable.

Unreported plan changes often signal that the architect has lost control of the project. "If the architect has drawn a set of specifications which detail substitutions—which all of them should—it's up to the architect to tell the contractor to remove (anything that was not specified)," says Richard Chiancone of Anthony J. Chiancone Landscape and Nursery, Inc. of South Euclid, Ohio.

Contractor communication

"Our feeling," says Chiancone, "is that the client has hired a professional landscape architect who must look out for the client's best interest, have the project put out for bid and have it constructed as drawn." Chiancone submits "99 percent" of his invoices to the owner or developer for approval, to insure that no changes have
For mite control, there's no substitute for Pentac Aquaflow®. It kills a wide spectrum of mite species, and can be applied indoors or out. Yet Pentac won't harm plants, not even when it's sprayed right on the open blooms. And it is a non-restricted use material with no unpleasant odor.

For 25 years, Pentac has been the product of choice for controlling dozens of kinds of mites, on hundreds of species of plants in thousands of greenhouses and nurseries. Now it is available for landscape maintenance use as well.

If you're not already using Pentac, there's no doubt you should be. See your distributor today.

Many of the trees that filled our country's first urban parks have come to the end of their life cycle. Plans must be made to replace them.

**THE TREE CHALLENGE**

Plans to replace the trees that stood as forerunners in America's first urban parks were never made. Is it too late?

by Terry A. Tattar, Ph.D., University of Massachusetts

Trees are the most important living components of a park or historic garden. No one can argue the beauty of the lawns and the other plantings. But trees are the most irreplaceable element in the natural landscape.

Trees, unfortunately, have not been treated well in many of our most prestigious gardens and parks. In contrast to lawns that require, and are provided, regular attention, trees are often treated with benign neglect. Many of the most important trees in these sites are in poor condition, suffering from abuse and lack of care. At the present level of tree management, large losses can be expected by the beginning of the 21st century.

However, it is not too late to begin to restore the trees in these gardens and parks. How we manage these areas in the 1990s will determine their condition in the early part of the 21st century.

First, a commitment must be made to the responsible management and preservation of shade trees in parks and gardens. We must also recognize and then protect trees from all activities detrimental to their health. Large attractive shade trees can always be present in our urban areas if we can continually protect and restore our trees.

**Historical perspective**

Many parks and historic gardens were created between 100 and 125 years ago, shortly after the period when Olmstead designed Central Park as a model for using urban space. This great social experiment was soon repeated throughout the United States.

Trees that were planted during that period and still survive are very old.

Their replacements should have been planned and losses anticipated many years ago. But, in most cases, they were not. Instead, I often find a great fear for removing any living trees, regardless of poor health or obvious defective condition. This strict adherance to preservation has caused many problems in parks and gardens and is contrary to the natural life cycle of trees.

We need to learn more about the cycle of life and death of trees, and how to protect trees from stresses that shorten their lives.

**Life and death**

A living landscape is subject to constant change. Responsible management is needed to plan for the inevitable changes that must occur in the living components of that landscape. Trees, due to their potentially long lifespans, are often overlooked when plans for changes are considered. Mature trees are often considered "permanent" components of a landscape and are expected to remain in an essentially static condition.

This situation has resulted in most parks greater than 100 years old having many large, old trees in various stages of decline and few, if any, replacements. Trees, like all living things, pass through stages of youth, maturity, decline and eventually death. Tree removals are always painful, but are essential to maintain healthy and safe trees on a site.

I have found the overall health of the trees on a site is often directly related to the number of trees planted each year. A program of tree replacement must be continual, and must be planned many years in advance of an-
Custom-tailor a Bobcat 2400 to fit your job.
You can custom-tailor your MTC (Multiple Tool Carrier) to fit your job, whether it requires excavating, landscaping, demolition, back-filling, loading, fertilizer handling, scrap handling, construction, or more.

More Agile: Positive four-wheel hydrostatic drive provides the traction and flotation you need to work in rough terrain and muddy job sites. And the MTC's articulated design provides a tighter turning radius to help you work in those hard-to-get-at places.

More Mobile: The MTC is ready to move when you are. Its ease of transport will save you money by cutting transportation costs and expensive downtime of larger machines, which often wait for ground transport.

More Versatile: The 2400 MTC features the exclusive Bob-Tach* system (available front) and a rear quick attachment system for fast, secure attachment changes. Your MTC can quickly change function from a loader to a landscape rake, or from a demolition hammer to a backhoe to a 3-point loader, plus many more, for even more versatility.

More than a loader.
More than a backhoe.

*Bob-Tach is the registered name for the patented front Bobcat attachment system.
Construction remains one of the biggest threats to trees. Injuries are caused by raising or lowering of grade and by trenching near the tree. Still, injured trees may take years to die.

ticipated tree removals.
A program of regular tree maintenance, however, can often extend the useful life of a tree indefinitely.

Management and preservation
It must begin when the tree is healthy, and must be sustained. Pruning dead, dying, and defective branches; regular fertilization; and using soil aeration and cushioning mulches to alleviate soil compaction, are examples of tree maintenance activities that promote vigor and extend life. Preventive tree maintenance on healthy trees is a much more successful strategy than attempting to preserve trees in severe decline.

Conflicts in tree care with the care of lawns and gardens are also a threat to the survival of shade trees. Lawns near trees are often treated with lime-based fertilizers and broadleaf herbicides. Most trees grow best at pH levels much lower than lawns. Many of the herbicides used on lawns are known to cause injury to trees.

We now know that trees roots routinely extend from the trunk twice the height of the tree, and sometimes extend further. Roots are not restricted to the area under the branches, or "drip-line."

Small absorbing roots of trees form in the same area as turf roots. Consequently, lawn care chemicals applied anywhere around trees can be expected to affect tree roots.

Injury by equipment
Injuries to trunks and roots from lawn care equipment can often cause cankers and decay. Similar injuries to roots can be caused by rototilling in annual beds near trees.

Sod should be removed from around the trunks and buttress roots, and a "mulch zone" should be established. This zone should be as wide as possible, and can be covered with a decorative mulch that will eliminate the need for entry of any lawn care equipment near the tree. Only perennial plantings can be allowed on this mulch zone, if any vegetation is desired. Annual plantings, which require periodic soil disturbances, should be restricted to areas far from any woody plants.

Trees can survive and remain healthy where turf and annual plants are grown, but adjustments in lawn and garden care must be made. The use of lawn care chemicals—especially herbicides—must be eliminated or minimized. Careful attention to the soil pH around trees must also be made to avoid high pH stress induced by turf fertilizers. A regular program of tree fertilization using a method, such as liquid soil injection, to both aerate and provide nutrients is also recommended.

Injuries to trunks and roots from lawn and garden equipment must be avoided to prevent root diseases, like shoestring root rot, a leading killer of stress and injured shade trees.

Construction as cause
Construction is the ultimate cause of death of many shade trees. Many trees in parks and gardens, especially in urban areas, are killed each year as a result of earthmoving activities, such as building construction and the installation or repair of underground utilities. The injuries caused by raising or lowering grade, and by trenching around trees, are often fatal.

Construction-damaged trees may take many years to die, but will often begin to decline soon after the construction has been completed. These weakened trees are often attacked by secondary pathogens and/or insects which accelerate their decline.

Because of weakened roots, construction-damaged trees may also be (or can become) hazard trees that constitute a danger to staff and visitors. Preventing all construction activities near trees is essential to their survival.

Frequent pressure for construction projects in parks and gardens is a fact of life in the urban environment. Communication must be established with those planning any construction activities in a park or historic garden before any construction begins. During planning stages, construction activities can often be steered away from trees to minimize their impact.

Establish barriers
Barriers to construction activities must be erected around trees before construction begins to prevent any "accidental" intrusion near trees. Barriers must be placed as far away from the trees as possible, and must not be moved until all construction activities have been completed. Whenever possible, large areas encompassing many trees and shrubs should be fenced from construction to protect them.

I have found that slatted "snow fences" secured by metal stakes work very well as tree protection barriers. They are easy to install, available and inexpensive.

Effective tree protection focuses on protecting the roots and soil near trees from any and all construction activities during the entire project.

Trees are critical components of parks and historic gardens. Trees must be managed and protected. Change is inevitable, and some trees must be replaced every year to make room for the next generation of trees. This change is natural and essential if the trees are to remain healthy, safe and available for generations to come.

Trees, however, must be protected from activities detrimental to their health. It is unthinkable to sacrifice a beautiful shade tree for a "weed-free" lawn. Lawn and garden activities around trees must be consistent with what will not harm the tree. Construction activities around trees must be avoided if possible, carefully planned in advance if necessary, and then, firmly restricted in scope, using tree protection barriers to minimize damage to trees.

Terry A. Tattar, Ph.D., is a professor at the Shade Tree Laboratory of the University of Massachusetts in Amherst. He has written two books and has published more than 100 scientific articles on tree health problems. For the past 10 years, he has acted as a consultant to many historic parks and gardens, including Central Park, Boston Commons, Tanglewood, Old Westbury Gardens and the Newport Preservation Properties.
High Density Polethylene Float:
Filled with US Coast Guard approved closed cell foam. Always floats level, stays afloat even if punctured or damaged. SS fasteners provide longer life.

4 Pole/High Torque Motor:
Designed specifically for aeration. Runs longer and cooler at 1725 RPM. Easy to maintain. Rebuildable, not disposable.

Lubricating Oil:
Developed by a major oil company for lubricating and very low dielectric capabilities. Acts as heat transfer.

Power Control Center:
Exclusive Westinghouse motor controls provide maximum built-in protection. UL, CSA and ETL approved. Standard equipment, not an option.

Safety Tested:
All Otterbine aerators are safety tested and approved by ETL.

High Volume, Low Pressure Impeller:
Designed to aerate and move large volumes of water. Precision pitched Stainless Steel affords increased efficiency.

Plug-Type Underwater Connector:
Designed for Otterbine. Easy connect and disconnect makes installation and service simple.

Strong Distributor and Service Network:
Over 130 distributors nationwide with 35 service centers staffed by factory trained personnel.

Gallons Per Minute Pumped

Otterbine®
We are the competition.

PROJECT PROFILE

This year Battery Park is again the focus of New York City's Parks & Recreation Department as petunias were planted at the rate of 7,000 a day to create a 40,000-flower Betsy Ross flag.

A FLOWERFUL HISTORY LESSON

New York City is celebrating its role in American history by planting trees and flowers.

Few places in the United States enjoy the rich American heritage that can be found in New York City. The Continental Congress designated New York as the country's first capital in 1788 and many of the critical events and battles of the War for Independence took place there.

More than 200 years later, the city's Parks Department is using trees and flowers to honor the people and events that shaped the city and, at the same time, our country.

Near Manhattan's Bowling Green, where an angry crowd pulled down a statue of King George III after a reading of the Declaration of Independence, is City Hall Park.

Although New York's present city hall wasn't built until 1811, on or near this site were military barracks, the area's first public school, an arsenal and other utilitarian buildings. In 1776 American fortifications bordered the area and Liberty Poles stood on the grounds. Later in the war, Nathan Hale was believed to have been hung from a tree there, as were other revolutionaries considered by the British to be seditionists.

Today the area is called City Hall Park and on this July Fourth celebration it will be decorated with ageratums and begonias arranged in the patterns and colors of the American flag, thanks in part to the F.W. Woolworth Co., which sponsored the planting.

Nearby is Battery Park, named for the battery of cannon lining the shore. A special planting representing the French and American flags was planted for the 1986 centennial celebration of the Statue of Liberty, which is in clear view. There are 45,000 red, white and blue petunias planted by NYC Parks gardening crews in a 12,000 sq. ft. bed, symbolizing the unity of France and the United States.

In the past year the area was again planted in bold stars and
Introducing the Ford C series.
A new standard of uptime performance.

Hot Iron has it. Cold iron doesn’t. Hot Iron protects your profits, and puts money in the bank. Cold iron takes the profit out of a job, and sends it down the drain.

The new Ford C series tractor loaders and tractor loader backhoes are built for profitable uptime performance, with more push, pull, lift, load, digging and staying power.

More push, pull and lift

New Ford loaders lower your cost per yard. With fully synchronized power-reversing transmissions, you get faster shuttling, with sure-footed stability.

Higher payload buckets and high output hydraulics cut bucket loading time.

New 8 x 8 transmission

If you’re looking for a great landscape loader, look at the new model 455C. Equipped with a new 8 x 8 power-reversing transmission with torque converter, it’s ready for any or all loading and landscaping jobs.

You get greater gear selection with ground speeds ranging from 1.5 to 20 mph . . . a full power independent PTO . . . and a torque converter lockup. With the torque converter lockup, you maintain constant ground speeds for grading, mowing, rototilling or roading.

A great place to work

Climb aboard one of these new operator platforms and experience the industry’s best design for operator comfort and convenience.

Low-effort, smooth-running controls are positioned so you’ll work faster with less fatigue.

See your Ford Tractor dealer for a demonstration. He’s listed in the Yellow Pages under “Contractor’s Equipment & Supplies.” Find out how good a tractor loader can be.
Today it's a pleasant park in the heart of Manhattan where one can go to enjoy lunch. But only 200 years ago, City Hall Park was a hotbed of revolution, a site that hosted military barracks and Liberty poles. Ageratums, pansies and begonias planted this year bring the present and past together beautifully.

Battery Park was decorated with more than 40,000 red, white and blue petunias for the centennial celebration of the Statue of Liberty, which is in clear view from the park.

Historic trees
The Parks department also planted groves of 13 trees each for the 13 original colonies at the site of historic houses in parks around the city. Native black tupelos were planted at Staten Island's Conference House (right), where on Sept. 11, 1776 Benjamin Franklin, John Adams and Edward Rutledge met with British Lord Admiral Richard Howe to negotiate peace (the British admiral offered to end the conflict if the colonies would return to British control. The Americans, of course, turned down Howe's offer).

Trees will be used to honor other famous houses, including the Linden trees at Van Cortland Manor in the Bronx, where the British held colonial patriots prisoners.

Historic parks
Franklinia trees were added to Thomas Paine Park in Manhattan, once the front line of battle in the Revolutionary War. Groves of green mountain sugar maples were planted at John Paul Jones Park in Brooklyn and at Rufus King Manor in Queens, the former home of a drafter and signer of the Constitution.

In Central Park's Strawberry Fields, a white pine was planted to commemorate the historic role of the Iroquois Six Nations, whose constitution served as a model for the U.S. Constitution. The Iroquois Six Nations are the oldest continual constitutional government on this continent. The first treaty George Washington signed with another government was with the Iroquois Nations in 1768, when the United States officially recognized Iroquois sovereignty.

At the southernmost tip of Staten Island is the Conference House, the site of a failed attempt to strike peace between the Americans and British in 1776. This year 13 native black tupelos were planted here, one for each of the original colonies.
CHIPCO® MOCAP® brand 5G stops grubs dead in their tracks.

Grubs can't hide from the fast-acting power of new CHIPCO® MOCAP® brand 5G pesticide.

As soon as CHIPCO® MOCAP® 5G is watered in, it quickly moves down into the root zone to kill grubs where they live and feed.

In fact, tests show that CHIPCO® MOCAP® 5G can provide up to 97% control of grubs. Plus, CHIPCO® MOCAP® brand 5G wipes out surface feeders such as chinchbugs, sod webworms, bluegrass billbugs and black turfgrass Ataenius.

While it's tough on turf insects, new CHIPCO® MOCAP® 5G is registered for use on nearly all types of turfgrass, including Bent, Bahia, Bermuda, Centipede, Fescue, Kentucky Bluegrass, St. Augustine, Zoysia and Perennial Rye species.

This year, get the turf insecticide that gets down to work fast. New CHIPCO® MOCAP® brand 5G pesticide.

Continuation of the family business requires that you choose your successor wisely, whether they're related or not.

By E.T. Wandtke

The importance of the family-run business is often overlooked. In the lawn care industry, this issue is starting to surface as a problem for business owners.

Succession and ownership are two problems unique to a family business. It is estimated that more than 13 million of today's family businesses have no plan for succession. In addition, many family businesses close because the impact of estate taxes is never considered when planning for succession.

What may have been adequate tax planning two years ago may now be inadequate after the Tax Reform Act of 1986. Make sure your tax adviser is on top of this issue.

Many don't make it
One in three family businesses fail after being passed onto the second generation. Third-generation family businesses succeed at a rate of less than one in seven. Poor planning is often the cause.

Currently one in three family businesses fail after being passed onto the second generation, statistics say.

Let's assume that one of your children does decide to go into your lawn care business. What is the best way to turn the company over to him or her? You could sell him or her stock, present the company as a gift or provision in your will, or pass it on to your wife first.

The plan of succession is an important component of the overall business plan. This plan requires the input of several outside advisers: a psychologist, a strategist such as AGMA and a tax counselor, usually your CPA. This may seem like an unusual team, but effective business succession requires a combination of talents.

The psychologist can determine if both you and the chosen successor are compatible and agree on the future of the company.

The strategist can determine the future viability of the company in the lawn care industry, and whether the remaining family members believe that there will be a business opportunity in the future.

A tax counselor is needed to develop the necessary financial strategies that will allow the company to pass from one generation to the next. This requires a minimum disruption in operations because of estate taxes.

When the choice is made
You need to find an individual capable of operating your company. Once this individual is on board, his or her training and development should be the same whether he is related or not.

The key issue is preparation. Your successor should possess the needed financial, marketing, operating and managerial sense as would be found in the owner of most successful service companies.

Do not look for a carbon copy of yourself. Choose someone with an understanding of the industry and the role that the owner of the company will be expected to execute. Encourage your successor to gain experience in making decisions and gaining the confidence of fellow employees and customers.

If your successor is not related, you need to develop a tax and financial plan that will effect the transfer of the company to the nonfamily member and provide you with income and security.

These issues need to be discussed with your tax advisor and attorney. If an agreement cannot be reached, there are several companies in the industry who will buy your company, but probably for less money than you would have received if it were sold privately to a known buyer.

Passing the business on to a family member or nonrelative requires much planning: tax planning to deal with the impact of estate taxes in the event the principal dies; business planning to anticipate the marketing, sales, financial, and compensation requirements; and personal planning to ensure your compensation in retirement.

Ed Wandtke is a senior consultant with All-Green Management Associates, in Columbus, Ohio. He focuses on operations and financial questions.
WE NEVER STOP PUSHING FOR PERFECTION

More people find more reasons to get behind Ransomes Bobcat than any other mid-size mowers. Because we never stop getting great ideas for improving them. Like our new ultra-durable, double-wide belt for truly uninterrupted mowing. Or our exclusive quick-lock caster clips for dependable wheel security. For landscaping and groundskeeping, remember; no one puts more new features on a wider selection of commercial mowers (32” to 54” cutting widths) than Ransomes.

The best selling mid-size mowers in the world.

To see more great ideas, get started at your Ransomes distributor. Or call Ransomes, Inc., One Bob Cat Lane, Johnson Creek, WI 53038, (414) 699-2000.

WHERE GREAT IDEAS START

Circle No. 274 on Reader Inquiry Card
Blended vs. homogenous granular fertilizers

by Keith J. Karnok, Ph.D., University of Georgia

In recent years there has been considerable discussion in the turfgrass industry regarding blended granular fertilizers versus homogenous granular fertilizers.

“Blended” describes the formulation process where the major fertilizer components, usually N, P and K, occur in separate particles, which are then mechanically mixed or blended together to form the desired N-P-K ratio.

“Homogenous” describes the formulation process where the N, P and K components are combined to form a single particle. Each particle would therefore contain the desired N-P-K ratio.

The uniformity debate

The point of discussion has centered primarily on the relative uniformity of application of these two basic types of fertilizers. It is believed that particles of blended fertilizers will segregate from one another when delivered from a rotary spreader, resulting in non-uniform fertilization. Conversely, segregation will be avoided by using homogenous fertilizers, thus resulting in uniform coverage.

The above situation is of primary concern when the materials are delivered from a rotary spreader. Rotary spreaders are commonly used by professional turfgrass managers because they afford ease of operation, wide swath, and relatively uniform distribution patterns.

A study was conducted at the University of Georgia in which the particle distribution of several commonly-used turfgrass fertilizers delivered from a rotary spreader was examined.

The study begins

In this study, the Scott’s R-X7 rotary spreader was used to deliver the fertilizer materials. The test procedure involved passing the spreader, which contained a specified fertilizer, over a series of specially-designed collection trays. Spreader speed was maintained at approximately three miles per hour.

Seven complete fertilizer materials were tested: three homogenous formulations, two fertilizer/pesticide combination products (BFC) and two blended fertilizers without pesticide (BF).

After passing the spreader over the collection trays, a small sample of fertilizer was taken from each tray for chemical analysis.

In addition to a chemical analysis, a physical analysis was also conducted. The physical analysis consisted of passing the fertilizer material from each collection tray through a series of wire mesh screens ranging from 2.00 to 0.25 mm.

The results of this study showed that with any given fertilizer, larger particles in the 1-2 to > 2 mm size range disperse relatively uniformly across the effective spreader swath. Materials do not accumulate at the perimeter or at the midpoint or center line of the swath.

Small particle dispersion

However, at particle sizes smaller than 1 mm, a much less uniform distri-
Entry forms are now being accepted by the Professional Grounds Management Society and LANDSCAPE MANAGEMENT magazine for their third annual "Landscape Manager of the Year" award.

The purpose of the award is to recognize superior job performance among landscape managers, to challenge those involved in the industry, to achieve higher standards of excellence and to bring national recognition to deserving managers.

Any person directly responsible for the professional maintenance of one or more landscapes is eligible to enter. Applicants will be judged according to job performance, honors and awards, procedures and philosophies, and contributions to the green industry. Applicants will be asked, at the time of entry, to submit four 5 x 7 black-and-white glossy photos and 10 color 35mm slides of current work areas with a short narrative on each.

bution occurred. These smaller particles showed greatest accumulation near the center of the spreader swath. Therefore, particle size of a fertilizer may help explain why some of the fertilizers examined in this study showed relatively non-uniform delivery.

To better understand this relationship, the particle size range of each material was determined (see table). In general, those fertilizers that spread the most uniformly also showed the smallest range in particle size. However, it is important to note that not all the blended fertilizers had non-uniform delivery. For example, BF2 was quite uniform; in fact, it was comparable to HF1. More than 84 percent of fertilizer fell in two size ranges (1-2 to > 2 mm). This explains its overall relatively uniform delivery. Only HF1, which had a narrower particle size range, showed slightly more uniformity.

N remains even
Although some fertilizers had non-uniform delivery, it was often difficult to observe growth or color variation in areas fertilized with these materials. There may be several reasons for this. Our data showed that of the three nutrients, nitrogen exhibited the least variation across the spreader swath.

Of the three nutrients, turfgrasses exhibit the most dramatic growth and color response to nitrogen in either excess or deficient amounts. Therefore, since nitrogen showed relatively good distribution across the spreader swath, it would be rare to see growth or color variations in the field when using any of the materials tested in this study.

Our results did show phosphorus and potassium as having more variation in distribution than nitrogen. However, neither one of these nutrients in excess or deficient amounts would be expected to cause an obvious growth or color response in turfgrasses. Therefore, non-uniform delivery of these nutrients over a turfgrass area would be difficult to detect.

In conclusion, in terms of uniformity of application, is there a real difference between homogenous and blended granular fertilizers? Our study showed that there can be. However, when considering uniformity of fertilizer dispersion from a rotary spreader, a uniform or narrow particle size range is more important than whether the fertilizer is blended or homogenous.

In general, our study showed that the more uniform the particle size for a particular fertilizer, the more uniform was its delivery from a rotary spreader, regardless of whether it was homogenous or blended.

Label is no help
Finally, it should be noted that information pertaining to the particle size of a fertilizer is not usually included on the product label. However, consider the other factors that are just as important when determining the potential effectiveness of a particular fertilizer.

Two important considerations would be the N, P and K analysis and the specific nitrogen carrier. Some important characteristics of the nitrogen carrier include: rate of N release, burn potential, acidifying effects, water solubility and cost per unit of N. In addition, keep in mind that the condition of the spreader, calibration, operation and terrain may also cause variation in the uniformity of fertilizer delivery.

If the wrong fertilizer is selected in regard to analysis and/or nitrogen carrier, and/or particular attention is not paid to the care of the spreader and the spreader’s operation, it will probably make little difference whether the fertilizer material is homogenous or blended.

---

Olathe SLIT SEEDERS/DETHATCHERS for turf professionals

With Olathe Slit Seeders you: • use less seed • get higher germination rates • have a healthier root system • thin out thatch and undesirable species • provide safer turf for sport areas • achieve the most important goal in over-seeding, namely, seed to soil contact.

MODEL 85 — 5 hp Seed n Thatch, low cost combination thatcher/seeder.
MODEL 84 walk-behind slit seeder, 18 hp, self propelled.
MODEL 37/38 for tractors in 16-25 hp range, bare dirt capabilities with dual feed hopper.
MODEL 83/93 — 4' PTO model for tractors 25 hp and up. In 1962, Buck Rogers built the first Rogers Slit Seeder. Now, in 1989, he has improved and expanded on his original ideas under the Olathe trademark.

Write or call your local Olathe/Toro dealer for information.

Growing sod over plastic: turf in five weeks

by Henry F. Decker, Ph.D., Ohio Wesleyan University

Interest in growing grasses in various media over plastic sheeting has grown recently.

Turf grown by O.M. Scott & Sons in 1965 proved that, given appropriate care, you can maintain a grass sod on concrete or any impermeable base as long as you have sufficient water and nutrients.

The basic idea is compelling: by placing a suitable growing medium and seed over plastic sheeting (in our case, 1- to 6-mm polyethylene sheeting), and irrigating it carefully, a tall fescue sod, for example, can be formed in as little as five weeks. The entire primary root system remains intact: unable to penetrate the plastic sheeting, the roots run laterally. They rapidly form a fibrous root mass that binds and knits the sod so that it can be harvested and handled in just a few weeks rather than the typical one to two years.

The new sod can be harvested by simply rolling it off the polyethylene sheeting which is left in place to be used again for subsequent sod crops. Since the sod is harvested with the root system intact, rather than being severed by a sod cutter, the sod binds and roots rapidly to a new site.

**Good news, bad news**

There are several other significant advantages to the process:

- Since the sod is grown in only a few weeks, much less water, fertilizer, and mowing are needed.
- Depending on the growing medium, the sod can be produced lighter than even a peat sod.
- The sod can be harvested and laid in large rolls (5 by 45 feet to give sod rolls of 25 square yards or more) which can eliminate a great deal of manual labor.

Despite the obvious advantages, several difficult problems have been encountered. First has been the availability of a plentiful, inexpensive, growing medium. Hundreds of materials appear to work in a greenhouse only to be quickly eliminated when considered on a field scale.

Second, the amount of growing material required to cover an acre sheet of plastic one inch deep translates into more than 130 cubic yards. That is too many dump truck loads to be competitive with the conventional sod on soil process.

Third, placing an exact amount of growing material in a thin layer evenly over acres of plastic film without distortion is a challenge. Rainfall - whether it be a drizzle or a downpour - compounds the problem.

Conventional sodding is very labor intensive. Significantly reducing the amount of hard labor involved has to be a prime attribute of any alternative sodding system.

**Positive developments**

Starting in the 1980s, several things helped make an alternative sodding system more feasible:

- The Beltsville system of composting sewage sludge began to catch on. Suddenly, at least in Ohio, an inexpensive growing material became available that is charged naturally with the right nutrients for grass culture.
- Techniques were developed to spread the growing medium evenly, to protect it from distortion in thunderstorms, and to reduce the quantity required to affect a sod.
- Turf-type tall fescues have been introduced. These new turf cultivars have several apparent advantages over bluegrass: they are more drought tolerant, possibly more shade tolerant, disease- and insect-resistant. They are more durable on playing fields, germinate and root more quickly and are more vigorous than bluegrass.

On the other hand, the tall fescues do not produce rhizomes and stolons. Hence, they do not lend themselves easily to conventional sod production. In practice, these drawbacks are compensated for by growing the sod for a longer than usual period, by including sod netting, and/or by adding bluegrass to the tall fescue seeding.

**Thanks, tall fescue**

These apparent disadvantages to growing a tall fescue sod in a conventional manner turn out to be strengths when tall fescue is considered as the main ingredient of an alternative sod grown on a solid base. The vigorous and rapid primary rooting gives the tall fescue cultivars a distinct advantage over the less vigorous bluegrasses.

With sod netting, we can easily grow in five weeks a bona fide tall fescue sod that expert grass men judge to be of comparable, even better, quality than conventional, soil-grown tall fescue sod.

In 1988 experiments supported by the National Science Foundation, we tested four different readily-available waste materials: composted sewage sludges from Columbus ("Com-Til") and from Akron ("Organix"); a spent mushroom soil from the Campbell Soup mushroom production facility in Jackson, Ohio; and composted feed lot waste from stockyards in South Charleston, Ohio.

Controls consisted of a typical Ohio clay loam field soil and a mix of one-half field soil and one-half Com-Til. These were tested simultaneously in irrigated, 2,000 square foot test beds and in greenhouse pots at Ohio Wesleyan University. Selected turf cultivars were the bluegrasses Midnight, Adelphi, Banff, Mo-
STAY AHEAD OF THE GAME.

The Jacobsen 7-Gang Hydraulic Ranger's high-production, tournament quality cut puts you acres ahead of the game and your golfers.

Get ahead, and stay ahead, with the 15' cutting swath of this rugged, hard-working pull behind. It cuts nearly 40% more grass than a 5-gang, yet it's every bit as maneuverable. And hydraulic-reel drive delivers a quality cut, even through heavy, wet grass or morning dew.

Plus, the Ranger leaves a good impression on your golfers instead of your turf. Its compact size and wide, high-flotation turf tires produce a lighter footprint than competitors—less than 10 PSI ground pressure. Team-up the Ranger with the Jacobsen G-20D turf tractor and you've got a high-production mowing system that's right at home on fairways, roughs, parks or schoolgrounds.

Any 42 PTO hp tractor can pull the Ranger, because it has a completely self-contained hydraulic system. The hydraulic pump mounts directly to the tractor PTO so you can turn tighter, without any PTO universal joints to get in the way or damage. And fast, simple hookup/disconnect frees up your tractor for other chores.

Easy-reach, up-front electrical solenoid switches start and stop the reels, and provide reverse rotation for backlapping or high-production vertical mowing. Hydraulic lift levers let you mow with three, five, six or all seven reels, for cutting widths from 84" to 184". Choose 6- or 10-blade, fixed or floating reels to match your needs.

So stay ahead of the game. See your Jacobsen distributor for full details and a free demonstration. Attractive lease and finance plans available. Or for more information contact: Jacobsen Division of Textron Inc., Racine, WI 53403.

A powerful 5-Gang Hydraulic Ranger with a 133" cutting swath is also available.
nopoly, America, and Nassau; and the tall fescues Jaguar and Rebel II.

**Good results**

The tall fescues reached an average height of 27 cm four weeks after planting on the waste materials as on the controls. They grew at least twice as fast as the bluegrasses on all waste materials. The bluegrasses averaged heights of 15 cm on the controls, 11 cm on the composted sludges and feedlot wastes, and only 6 cm in four weeks on the mushroom soil.

The sewage sludges had to be “leached out” prior to seed germination with the seedling root growth proportional to the amount of leaching. In the field this translated into intense irrigation (four inches of water per week) for the first two weeks of planting.

Despite a record drought over the 1988 summer, we were able to prove conclusively that it was possible to substitute waste materials for topsoil and to produce consistently high quality tall fescue sods in short periods.

With certain pre-conditions, it would not be unreasonable to assume that a perfectly serviceable tall fescue sod could be produced in as little as a month.

**Saving time, space**

Surprisingly, because of the drought, after the first two weeks of initial growth the tall fescue sods grown on plastic needed less water to maintain in prime condition than our conventional bluegrass sods on soil. And acceptable tall fescue sods were being produced with as little as 20 cubic yards of waste material per acre. The optimum was in the range of 40 to 50 cubic yards per acre. No pesticides or adjuvants were needed.

Bluegrass sods are much more difficult to produce than tall fescue sods. (A hot summer on plastic is probably asking too much of bluegrasses.)

In 1989 summer experiments, we hope to be able to study the effects on bluegrass seedings of intermittent, cool, deep, well water and to look for bluegrass cultivars that have greater drought tolerance and other favorable characteristics.

**Smart waste disposal**

Another attractive feature of this innovative growing process is its broad application on a national scale. Since the growing medium is contrived or constructed from waste materials—such as composted sewage sludge—substantial amounts of topsoil would be saved. And an obviously troublesome, ever-expanding waste material would be handled effectively, efficiently, and disposed of safely.

It has been estimated that only five percent of the U.S. annual cultivated sod production (estimated at 250,000 acres a year) devoted to this growing process using sewage sludge as the main ingredient of the growing mix in place of topsoil, production would be the equivalent of using the total dry sludge production of Boston, New York, Philadelphia, Washington, and Chicago combined.

When the capacity of the new sod growing system to produce four to eight crops per year is factored in, then it can be calculated that only about 1,500 to 3,000 acres of growing surface would be needed for all of these cities.

If the technology of the earlier research can be refined and adapted to cost effective production on a large scale then an entirely new avenue of resource recovery will be introduced into the handling and disposition of otherwise troublesome waste materials. In addition, a better and more economical method of growing grass sods, which also conserves topsoil, will be introduced.

LM

**Hahn**

**The HAHN Pendulum Action SPREADER**

The strength and durability of steel coupled with the precision of pendulum action make the Hahn PA-17 your spreader solution.

With a capacity of 17.1 cu. ft., the conical seamless steel hopper ensures free flow of all materials... fertilizers, seed, lime or sand.

Infinite arc adjustment and multiple flow settings allow you to calibrate the PA-17 accurately and confidently.

Available for 3-point hitch mounting or as an attachment for the Hahn Multi-Pro 418. From Hahn, the leaders in application equipment.

For a free demonstration call your nearest distributor or: 1-800-457-HAHN in Indiana 812-428-2020

Circle No. 121 on Reader Inquiry Card

70 LANDSCAPE MANAGEMENT/JULY 1989
What are Fine Fescues and why are they so important to turf managers?

Our Fescue turfgrasses are part of most every park, golf course, industrial campus, athletic field, condominium commons and home lawn from the transition zone, Northward.

But, many people are not aware of that. Perhaps we are the most overlooked turfgrass in existence.

We feel that Fine Fescues are the best turf investment a grounds manager can make. And, we'd like to point out why.

Fine Fescues are real grass. And, as with all living things, there is give and take. Sure, our Fescues take water and some maintenance, but they are better givers. Our natural grass turns noxious gases into oxygen and is a natural air conditioner for turf users.

We feel that while artificial turf has its place on locker room floors, it has no business where real people work, play and relax. Our grass is just naturally more refreshing.

Our Chewings (Festuca rubra commutata) and creeping red (Festuca rubra rubra) Fescues are rather unique when compared with other turfgrass species. Although they have most of the features of other cool season grasses, Fescues have several distinct benefits worth noting.

Fine Fescues are low maintenance. Our varieties require less fertilizer and water than other species. That's a big plus at today's water, fertilizer and manpower prices.

Fine Fescues fare well around trees. It seems our grass doesn't need as much sunlight, water and nutrients as other turfgrass species. Because Fescues don't compete with trees for these important elements, they're called shade grass. Our Fescues don't creep into flower beds, nor crowd out other species in a mixture.

And, because they're Oregon grown, our Fescues germinate, adapt and perform better than imported types.

You'd expect to pay a fortune for such a turfgrass, but Fescues are quite reasonable

Why don't Fescues cost a great deal? Fine Fescues have been around a long time and have been changed very little. Why mess with a good thing? While other former "pasture" species are coming closer to looking like our old standard; receiving notoriety for their "improvements" and enjoy the price increases associated with the word "new," our Fescues have continued what they do best... support the up-and-comers. But then, Fine Fescues were meant to be stepped on.

Fine Fescues are Ideal for Recreation, Sports and Leisure

Not only do Fine Fescues excel alone or in perennial ryegrass/Kentucky bluegrass mixtures on horizontal playing surfaces; Fescues are excellent for low maintenance areas like berms, roadside banks, ski slopes and hilly spots that don't retain moisture. So, you see, Fescues are ideal all-around grasses for all around your recreation and sports facility. Their low maintenance requirements offer turf managers a chance for a little more leisure... and there's nothing wrong with that.

For a series of nine tech sheets on Oregon grown Chewings and creeping red Fescues, call or write:

410 - DISEASES & PESTS OF ORNAMENTAL PLANTS
by Pascal Pirone
This standard reference discusses diagnosis and treatment of diseases and organisms affecting nearly 500 varieties of ornamental plants grown outdoors, under glass or in the home. Easy to understand explanations of when and how to use the most effective fungicides, insecticides and other control methods. $37.95

415 - INNOVATIVE APPROACHES TO PLANT DISEASE CONTROL
by Ian Chet
Brings together alternative approaches and methods that have potential to control diseases caused by fungi, bacteria and viruses. Major concepts of disease control discussed include biological control systems, their possible mechanisms, potential application and genetic improvement. $52.50

420 - TURF MANAGEMENT HANDBOOK
by Howard Sprague
Practical guide to turf care under both healthy and poor turf conditions. Chapters cover turf in cooler and warmer regions, fertilizer use, regular turf care, weed and disease control and special turf problems. Useful seasonal schedules for management of turf areas. $25.25

500 - THE GOLF COURSE
by Cornish and Whitten
The first book ever to give the art of golf course design its due, and golf course architects the credit and recognition they deserve. 320 pages and 150 color and black and white photographs. Traces the history and evolution of the golf course, analyzes the great courses, shows how they were designed and constructed. $35.00

505 - HORTUS THIRD
from Cornell University
A comprehensive basic text and reference source used in many leading university turf programs. Includes findings of current research compiled from more than 12,000 sources. $42.90

800 - THE GOLF COURSE
by Logan and Lyon
Essential information for identifying more than 650 insect pests and the injuries they cause. More than 200 color illustrations. $35.00

805 - INSECTS THAT FEED ON TREES AND SHRUBS
by Johnson and Lyon
Explanations of when and how to use the most effective fungicides, insecticides and other control methods. $27.95

510 - HORTUS THIRD
by Daniel and Freeberg
ENTIRELY UPDATED A practical guide to turf care under both healthy and poor turf conditions. Chapters cover turf in cooler and warmer regions, fertilizer use, regular turf care, weed and disease control and special turf problems. Useful seasonal schedules for management of turf areas. $25.25

220 - CONTROLLING TURFGRASS PESTS
by Shurtleff, Fornesian, Randell
New comprehensive guide provides the most up-to-date information available on the identification, biology, control and management of every type of turfgras pest. $26.00

640 - TURF IRRIGATION MANUAL
by James Wade
A guidebook for engineers, architects, designers and contractors. Keeps pace with the latest developments in turf and landscape irrigation. Specific chapters devoted to the understanding of sprinkler design systems. $27.25

650 - TURFGRASS: SCIENCE AND CULTURE
by James Beard
Comprehensive basic text and reference source used in many leading university turf programs. Includes findings of current research compiled from more than 12,000 sources. $42.90

810 - TURF MANAGEMENT FOR GOLF COURSES
by James Beard
Written by an eminent turfgrass researcher, this USGA sponsored text is an ideal reference and "how to" guide. Details all phases of golf course design and construction, turf management, cultural practices, administration, irrigation, equipment and disease and pest control. Fully illustrated. $52.75

345 - COST DATA FOR LANDSCAPE CONSTRUCTION 1989
by Kenneth N. Crawford
An updated unit cost data reference for anyone who works with cost estimators. Developed to fill the tremendous need for detailed landscape construction cost data. Laid out in easy-to-use CSI format. Annual. $35.00

350 - LANDSCAPE DESIGN: A PRACTICAL APPROACH
by Larry Goulden
Geared for the commercial designer/salesperson, this is a one-stop guide to the landscape design process. Covers the entire highly competitive design process, from analysis techniques, pointers on land forms, specialized business landscaping methods, environmental design guidelines, project planning, estimating, etc. $41.00

355 - LANDSCAPE MANAGEMENT
by James R. Feucht and James R.-selection
Paving the way for design, trees, shrubs, and turfgrasses. Describes the basic principles of cultural management of installed landscapes. The important factors of plant growth, soils and fertilizers, improved cultivation techniques and new pruning techniques, integrated pest and disease management, and soil and plant analysis and care are all featured. $29.95

360 - ADVANCES IN TURFGRASS PATHOLOGY
by Joynar and Larsen
Leading U.S. turf pathologists report on turfgrass diseases, pythium blight, snow molds, fairy rings, leaf spot of Kentucky bluegrass in Minnesota, and fumigoids sprayed for turfgrass disease resistance. New concepts on how to control turfgrass problems. $27.95

230 - LAWN CARE: A HANDBOOK FOR PROFESSIONALS
by W. Decker, J. Decker
Written by turfgrass professionals, this handy guide will be invaluable for playing field managers, golf course managers, or any lawn care professional. Covers all aspects of turfgrass management. $36.00

655 - MANAGEMENT OF TURFGRASS DISEASES
by J.M. Verges
Identifies turfgrass diseases by description and illustration. Includes a holistic approach to healthy turf and lawns. Presents practical management strategies for golf courses, lawns and athletic fields. 504 pages, illustrated. $28.70

680 - INSECT CONTROL HANDBOOK
by Howard Sprague
Practical guide to turf care under both healthy and poor turf conditions. Chapters cover turf in cooler and warmer regions, fertilizer use, regular turf care, weed and disease control and special turf problems. Useful seasonal schedules for management of turf areas. $25.25

520 - INSECTS & PESTS OF ORNAMENTAL PLANTS
by Pascal Pirone
This standard reference discusses diagnosis and treatment of diseases and organisms affecting nearly 500 varieties of ornamental plants grown outdoors, under glass or in the home. Easy to understand explanations of when and how to use the most effective fungicides, insecticides and other control methods. $42.00

355 - LANDSCAPE MANAGEMENT
by James R. Feucht and James R.
Paving the way for design, trees, shrubs, and turfgrasses. Describes the basic principles of cultural management of installed landscapes. The important factors of plant growth, soils and fertilizers, improved cultivation techniques and new pruning techniques, integrated pest and disease management, and soil and plant analysis and care are all featured. $29.95

405 - COST DATA FOR LANDSCAPE CONSTRUCTION 1989
by Kenneth N. Crawford
An updated unit cost data reference for anyone who works with cost estimators. Developed to fill the tremendous need for detailed landscape construction cost data. Laid out in easy-to-use CSI format. Annual. $35.00

236 - LAWN CARE: A PRACTICAL APPROACH
by Larry Goulden
Geared for the commercial designer/salesperson, this is a one-stop guide to the landscape design process. Covers the entire highly competitive design process, from analysis techniques, pointers on land forms, specialized business landscaping methods, environmental design guidelines, project planning, estimating, etc. $41.00

300 - LANDSCAPE DESIGN: A PRACTICAL APPROACH
by Larry Goulden
Geared for the commercial designer/salesperson, this is a one-stop guide to the landscape design process. Covers the entire highly competitive design process, from analysis techniques, pointers on land forms, specialized business landscaping methods, environmental design guidelines, project planning, estimating, etc. $41.00

305 - LANDSCAPE MANAGEMENT
by James R. Feucht and James R.
Paving the way for design, trees, shrubs, and turfgrasses. Describes the basic principles of cultural management of installed landscapes. The important factors of plant growth, soils and fertilizers, improved cultivation techniques and new pruning techniques, integrated pest and disease management, and soil and plant analysis and care are all featured. $29.95

72 LANDSCAPE MANAGEMENT/JULY 1989
370 - LANDSCAPE OPERATIONS: MANAGEMENT, METHODS & MATERIALS
by Larry Hansbrough
An in-depth examination that combines technical training in landscape science with methods of accounting, business management, marketing and sales. Discusses effective methods for performing lawn installations, landscape planting and maintenance. Step-by-step accounting calculations are explained in simple terms. $38.00

365 - LANDSCAPE PLANTS IN DESIGN
by Edward C. Martin
An annotated photographic guide to the design qualities of ornamental plants and their aesthetic and functional use in landscape designing. Over 600 trees, shrubs, vines, ground covers and turfgrasses are described in nontechnical language. Over 1000 photographs. Provides a basis for selecting the best plant materials for any particular use in landscape design. Contains detailed indexes that provide quick reference to particular design qualities and growing conditions. $54.95

665 - ARBORICULTURE: THE CARE OF TREES, SHRUBS AND VINES IN THE LANDSCAPE
by Richard W. Harris
Provides comprehensive coverage of complete planting, site analysis, preparation and special planting methods, fully detailed coverage of fertilization, irrigation and pruning guidelines on preventative maintenance, repair and chemical control, how-to's of diagnosing plant problems, practical data on non-infectious disorders, diseases, injury symptoms, protection of new trees, and management, survey and evaluation. $56.00

755 - TREE DETAILING
by Michael Littlewood
A compendium of practical information on all aspects of tree planting, maintenance and survey, dealing with tree stock and sizes, planting techniques, pruning and surgery, protection of new trees and existing trees, maintenance and management, survey and evaluation. $32.95

400 - NATIVE TREES, SHRUBS, AND VINES FOR URBAN AND RURAL AMERICA
by Gary L. Hightshoe
This award-winning reference to native U.S. plants has now been expanded to include shrubs and vines. Over 250 major species are characterized by form, branching pattern, foliage, flower, fruits, habit, soil, hardiness, susceptibility, urban tolerance and associate species. Includes unique color-coded keys that classify plant species by visual characteristics, cultural requirements and ecological relationships. $79.95

780 - TREE MAINTENANCE
by Pascal Prine
The fourth edition of this guide for anyone involved in the care and treatment of trees. Special sections on tree abnormalities, diagnosing tree problems, non-parasitic injuries and assessing the suitability of different trees. $49.95

720 - SHRUB IDENTIFICATION
by George Symonds
Pictorial reference to identifying trees by checking leaves, buds, branches, fruit and bark, like its sister publication, SHRUB IDENTIFICATION, popular and botanical names are listed with index tabs for easy reference. $14.95 paperback

750 - TREE IDENTIFICATION
by George Symonds
Pictorial reference to identifying trees by checking leaves, buds, branches, fruit and bark, like its sister publication, SHRUB IDENTIFICATION, popular and botanical names are listed with index tabs for easy reference. $14.95 paperback

405 - WOODY ORNAMENTALS
by Partyka, Joyner, Rimelspach, Carver
Illustrates plant identification characteristics. Organized in two basic sections: plant identification and plant disorders, this text utilizes 430 color photos, 430 line drawings and 45 black and white photos to simplify identification. $32.95

NEW! Instructional Videos!

01 - PROFESSIONAL SOD LAYING TECHNIQUES - 25 minutes - Color - VHS - $85.00

02 - PLANTING AND STAKING LANDSCAPE TREES - 20 minutes - Color - VHS - $85.00
Award-winning in-field demonstration video covers the keys steps of planting landscape trees. Illustrated reference guides and group study materials included.

03 - SUCCESS WITH BEDDING PLANTS - 25 minutes - Color - VHS - $85.00
Shares those "tricks of the trade" used by national award-winning professionals. Shows how to select, install and maintain bedding plants successfully. Illustrated reference guides and group training materials included.

04 - WORKING WITH PESTICIDES - 2-45 minute videos - Color - VHS - $143.95
This video safety course covers Pesticide Labels, In-Field Clothing & Equipment, How to Be Prepared for a Spill, Tips on Mixing and Calibrating Pesticides and more.

05 - PROFESSIONAL TURF MANAGEMENT - 30 minutes - Color - VHS - $85.00
Examines nine major warm and cool season turf varieties. Optimum mowing heights and cutting frequency are given each turf variety. Illustrated reference guides and test review included.

06 - LANDSCAPE IRRIGATION, MAINTENANCE AND TROUBLESHOOTING
30 minutes - Color - VHS - $85.00
Step-by-step instructional video for lawn installations, landscape plant and maintenance. Illustrated reference guides included.

07 - PLANT PROPAGATION - 2-25 minute videos - Color - VHS - $85.00 each
Volume One covers four important methods of propagation: by seed, division, bulbs and tubers and micropropagation. Volume Two covers three additional techniques of propagation: cuttings, layering and grafting and budding. Study guides included.

08 - ELEMENTS OF PRUNING - 30 minutes - Color - VHS - $89.95
Available in English or Spanish. Best-selling video developed for entry level industry training presents in-the-field demonstrations of The Techniques of Thinning Out Pruning, How to Control and Direct Plant Growth by Selective Pruning, How to Prevent In-Field Injuries and more. Illustrated reference manual and reproducible group study guides included.

375 - RESIDENTIAL LANDSCAPES
by Gregory M. Pierceall
An excellent reference for individuals involved in the design and development of plantings and constructed features for residential sites. Illustrations and actual residential case study examples are used to communicate graphic, planning and design concepts which are the focus of this text. $41.00
**PRODUCTS**

**Spot spray liquids with electric unit**
Lesco, Inc. has introduced a new electric-powered sprayer kit designed to fit the Lesco Standard or Hi-Wheel Spreader. The Spreader Sprayer spot sprays liquid products while the spreader is used to apply granular products. According to Lesco, this allows spraying on isolated broadleaf weed while applying granular fertilizer to a large turf area.

A stainless steel, folding boom is included, with two Floodjet spray tips. The spray tips can be adjusted to spray product over the same area as the granular product pattern. A three-gallon polyethylene solution tank and a fully charged battery provide seven hours of continuous spraying. Battery charger included.

Circle No. 190 on Reader Inquiry Card

**Steel grating for catch basins**
Seidelhuber Metal Products has a new type of galvanized steel grating designed to provide permanent, heavy-duty covering for golf course catch basins and drain inlets.

The grating is designed to provide optimum drainage while catching leaves and other debris on the surface for easy clean up.

In addition, the company says the grate reduces maintenance costs and helps prevent accidents to players and course personnel caused by poorly enclosed basins and inlets.

Circle No. 192 on Reader Inquiry Card

**Greenhouse sprayer high pressured**
The "Mini Pro Care" series greenhouse sprayer from Agrotec is designed for nursery and greenhouse operators applying a wide range of pesticides, fertilizers and plant hormones.

Each sprayer is equipped with a 4.4 gallon/minute diaphragm pump that delivers 275 pounds of pressure, for mid-sized tree spraying or reaching distant corners of nursery beds and greenhouse benches. The handgun kit features a high-reach, pistol-type grip with adjustable spray patterns. A wide range of optional adapters and extensions are also available.

Constructed of linear polyethylene, the 30-gallon tank incorporates ultraviolet absorbers to prevent sunlight deterioration. The tank has a cut-off valve, easy-to-clean line strainer with stainless screen, drain plug for easy cleaning, a threaded fill-well that provides a tight seal and an anti-splash lid for easy filling and cleaning.

The Mini-Care Series comes with a 3 hp Briggs & Stratton engine and positive hydraulic-jet agitation on the basic skid model.

Circle No. 191 on Reader Inquiry Card

**Look for spray unit at Louisville Expo**
A new, trail-type unit for spraying liquid pesticides, herbicides and fertilizers will soon be available from Easy Rake of Lebanon, Ind.

The Model 84 features a 13-gallon plastic spray tank. Maximum pressure is 50 psi, powered by a 12-volt electrical system.

An adjustable spray boom on the rear of the trailer can be locked in a raised or lowered position. Spray swath is 6'/2 feet. A hand spray wand is also available, with a 12-foot long hose to spray up to 25 feet.

The Model 84 sprayer will debut at the International Lawn and Garden Equipment Expo in Louisville, July 31-August 2.

Circle No. 193 on Reader Inquiry Card

**New vacuum/blower compact, heavy duty**
The HDV-370/IC is a new vacuum/blower from Lambert Corp.

This product is powered by a 5-hp Briggs & Stratton engine. The heavy-duty steel impeller handles all types of litter and debris, and is totally out of reach when the unit is operating.

A 3" x 30" nozzle allows easy pickup of debris and extends beyond the right wheel to clean up to fences or raised structures. Single lever height adjustment offers settings from 1/2" to 4/".

The bag holds 8.4 cubic feet and is made of a filtering material. All dust is contained within the bag.

 Meet your new source of extra-service income.

Old faded mulch becomes new profitable business with LESCO Nu-Mulch. It's the new colorant that quickly and easily restores original color to mulch.

One application lasts two to three months and costs about half as much as putting down new material. And LESCO Nu-Mulch is an easy-to-use liquid that is applied with a backpack or handheld sprayer. No bags, no bulk.

Non-toxic to plants, LESCO Nu-Mulch is an inert, water-soluble formulation that easily washes off most types of foliage. It will put you in the mulch business all season long.

Make old mulch your new source of income. Order LESCO Nu-Mulch today.

**Drainage system made from recycled plastic**

InnoPlast, a chemical-resistant, polyethylene-based recycled plastic material is being used to manufacture InnoDrain, a new trench drainage system from Innovative Plastics Products, Inc.

IPPI says the system is durable, lightweight and economical compared to other systems on the market.

InnoDrain is a neutral-sloped system with an interlocking design and modular ribbing in 4" increments for an exact fit. Dual oval outlets at each end accommodate 4" or 6" pipe. Standard overall depth is 97/8 inches and the inside top width is five inches. InnoDrain is available in standard 36" lengths with gratings for all applications from light pedestrian traffic to heavy duty vehicular traffic.

*Circle No. 195 on Reader Inquiry Card*

**Tree guards work wonders**

Tree-Gards are plastic sheets that wrap loosely around the bark of young trees to protect them from temperature fluctuation during the late winter and early spring months. The guards stand from 12 to 36 inches, and T & G Products, Inc. says they ward off unwanted animals, such as rabbits and mice that can feed on tree bark. They also help prevent southwest blight during the late winter/early spring freeze and thaw cycle.

Tree-Gard is white, so it reflects the sunlight and prevents the bark from thawing during the day.

*Circle No. 196 on Reader Inquiry Card*

**Fertilizer injector made for smaller companies**

The Pro-jector automatic proportioning fertilizer injector is now available in a five-gallon model. The new size was developed because of the popularity of the quart and one gallon units, and because of the demand by small agricultural and other commercial users.

TFS Systems says the Pro-jector was designed for those users who need to proportionately control the amount of fertilizer or other liquid additives being distributed through the irrigation system. The five-gallon model features a multi-tank design in which existing water pressure forces...
**Brouwer**

the “best buy” in transportable reel mowers.

Dollar for dollar, feature for feature... no competition.

Available as 5-gang or 7-gang units and as a Fairway Model for that extra fine quality cut and lightweight mowing demanded on fairways.

The standard mower is ideal for the roughs on golf courses, with its easy “quick height of cut” adjusters, and also for parks, recreation fields, school boards, municipalities and turf growers.

Brouwer™ mowers offer outstanding value and important features:

- Proven positive “no slippage” drive, with no heavy wheels, gears or expensive hydraulic components.
- Low horsepower requirements
- Lightweight, but strong, means less compaction
- Rough and fine cut models
- Economical and easy to service and maintain
- Proven superior performance in varied types of grass and conditions especially in the wet

Options include:

- 4, 5, 6, 7 or 8 bladed reels
- Track removal brushes
- Backlapper

For more information call your Brouwer™ dealer... TODAY.
Air in the bottom tanks to compress, causing the fertilizer in the top tank to be injected into the system.

A big advantage, according to TFS, is that the Pro-jector causes less than two pounds of pressure loss to the irrigation system.

Test results released for liquid fertilizer

Hallier Enterprises of Vermillion, Kan. has made available test results from the University of Arkansas Division of Agriculture on Bioform FPH 8-8-8.

Bioform is a fish protein hydrolysate blended with additional primary plant food nutrients and water soluble seaweed extracts. It is formulated for use directly on the seed or for dilution with water for use in transplanting, in row placement or foliar fertilization application.

Hallier Enterprises says Bioform FPH 8-8-8 may be used on houseplants, vegetable and flower gardens, horticultural and nursery plants and on commercial crops.

Trial samples are available.

Sales Managers and Sales Representatives

Tru Green Corporation, America’s fastest growing grounds care service company is seeking to fill the positions of Commercial Sales Representatives and Commercial Sales Managers in several major market areas.

SALES REPRESENTATIVE

A college degree is preferred with a minimum of 2 to 3 years of solid sales and marketing experience. Service or grounds care industry background is a plus and must be able to substantiate a consistent track record of success in sales goal achievements.

The successful candidate must possess excellent communication and field organizational skills and be able to work in a team building environment.

DISTRICT SALES MANAGER

A college degree is required and must have 2 to 3 years of management experience in supervising field sales personnel. Grounds care or service industry background is a plus and must be able to substantiate a consistent track record of success in profit and sales goal achievement.

Responsibilities for this key management position encompass sales training and motivation, profit and loss, marketing, and operations team building.

This position offers a competitive base salary and the opportunity to participate in a performance based incentive plan. A comprehensive benefits package is also offered.

Please send resume and salary requirements to:
Mr. William C. Johnson, Director of Sales
Tru Green Corporation
111 Alderman Drive / Bldg. 200, Suite 275 / Alpharetta, GA 30201

Keep sprayers clean with scale inhibitor

Aqua-Flo, Inc. of Baltimore has introduced a non-chemical means of preventing scale build-up on spray fogger nozzles. It’s designed for pipe sizes 1/4” to 4” and flow rates of .10 gpm to 400 gpm.

Additional non-chemical treatment is available to control iron stains and biological contamination.

Full-color catalog for indoors/outdoors

A 32-page catalog from Garon Products of Wall, N.J., offers a full line of indoor and outdoor maintenance products. De-icers, instant concrete
Give grubs an inch and they'll take a whole yard.

Grubs feed at many levels in a yard, but it's at 1" to 1½" below the surface where they do their real damage. And because grubs are constantly moving from one level in the soil to the next, a single treatment of most insecticides will only get the ones closest to the surface.

But with OFTANOL® insecticide, you have the strength to knock out those grubs closest to the surface now, and the staying power to deal with grubs, rising up from the depths, in the future.

So take away that inch. And keep the whole yard.

Oftanol.
and pavement repair products, anti-skid coatings, roof coatings, weed killers, cauls, sealants and cleaners. Also included are electronic products, energy-saving devices and safety and material handling equipment.

Control white grubs and surface feeders
Lebanon Total Turf Care's Insect Control with Sevin 7G is produced for use on lawns, parks, golf courses and other professionally maintained turf areas.

Lebanon says the product provides economical, safe and dependable control of common white grubs and a broad range of surface-feeding insects. It is also said to be effective against nuisance pests when applied near buildings and patios.

This is a granular control product. It prevents damage to turfgrasses as well as trees, shrubs and ornamentals. According to Lebanon, when used as directed, it provides effective control of turfgrass pests, including white grubs, armyworms, chinch bugs, cutworms, earwigs, grasshoppers and ticks.

A 20-pound bag provides coverage of up to 10,000 square feet.

Circle No. 202 on Reader Inquiry Card

Vacuum relief valve improves air flow
Rain Bird Sprinkler Manufacturing Corporation has developed the RB 2AV Air Vent/Vacuum Relief Valve for use in the green industry.

The Air Vent features a patented, aerodynamically designed, pear-shaped float. The float is designed so that it helps reduce drag, allow higher air flow rates and resist premature closing.

When the valve is set in the closed position, the elastomer gasket seals against a precision machined seat, thereby providing a tight seal at very low pressures.

The valve has a pop-up stem that is easily visible, showing the the float’s position and valve operating mode.

Rain Bird reports that the Air Vent/Vacuum Relief Valve is pressure rated at 2-150 psi, with a 2-inch FNPT inlet.

Circle No. 203 on Reader Inquiry Card

Heavy-duty steel grating is a permanent covering
Seidelhuber Metal Products, Inc., has made available a new type of galvanized steel grating designed to provide a permanent, heavy duty covering for golf course catch basins and drain inlets.

The grating is designed to provide optimum drainage while catching leaves and other debris on the surface for easy clean-up. The grating is available in spans to 5 feet and it supports golf carts, mowers and ground maintenance vehicles.

Flowable Morestan gets EPA go-ahead
The Environmental Protection Agency has accepted for registration Mobay Company's new flowable formulation of Morestan 4 ornamental miticide for use on flowers, shrubs and trees. It is free of harmful solvents.

Mobay sources add that the smaller particle size in the flowable product allows for more thorough distribution on the leaf surface, thus offering better coverage and better control.

Morestan 4 is available in quart sizes with "Caution" label. It is not available in California.

Circle No. 205 on Reader Inquiry Card

Pulverize aerator plugs the easy way
The Olathe Model 56 Plug Pulverizer out-front attachment for the Toro Groundsmaster 300 series helps pulverize and topdress after aeration.

Features include PTO-power, 70 rubber fingers, 34 blades and a 5-ft. swath. Only the rubber fingers will come in contact with the ground, not destructive steel hammer blades common to other grinders, Olathe notes. The plugs are lifted off the turf and battered against the frame before passing by stationary cutters and through a screen to pulverize in one pass.

PUT YOUR MONEY WHERE YOUR GRASS IS AT FTGA '89

Florida Turfgrass Association Annual Conference and Show
October 8-11, 1989 • Tampa, Florida

The Largest Turfgrass Conference in the Southeast
Latest Facts About Warm-Season Turf • Industry Trends
Research Updates • Management Techniques and Practices

SEVEN NEW WORKSHOPS!
Broad range of topics make these popular, in-depth sessions a must — Aquatic Weeds, Electrical Equipment Repairs, Disease, Nematodes, and Insects, Landscape Plants, Labor Relations, even Personal Money Management. Workshops are open to FTGA members, but be sure to pre-register if you want to attend!

EDUCATIONAL SEMINARS THAT REALLY COVER YOUR TURF!
Virtually every area of turfgrass management is included in our broad range of educational topics. As always, earn C.E.U. credits when you attend designated sessions.

OUTSTANDING SHOW OF EQUIPMENT & PRODUCTS
Hundreds of manufacturers and suppliers will be there with the latest equipment, fertilizer, chemicals and more! Open every day with free admission Wednesday. So bring all your employees (and don’t forget your Greens committee and Board of Directors!)

It’s going to be another great conference and show — don’t miss it! Mark your calendar now and call for registration details.

INTRODUCING ONE TOUGH, VERSATILE MACHINE

Today It's A Mower, Tomorrow A Snowthrower.
It's the commercial machine that converts easily to handle your year-round maintenance needs.
Which means a mower easily becomes a power brush, a snowthrower, or any of a number of machines, with attachments available from Cub Cadet. You'll need only one machine—our rugged Power Unit can handle it all.

Built For Durability, Versatility, and Muscle.
• Your choice of three powerful electric start Vanguard engines: 8.5 HP single cylinder OHV, and 12.5 or 15 HP twin cylinder OHV
• Beltless final wheel drive for sure-footed power, even on wet turf
• Planetary transmission, with five speed ranges in forward and reverse
• No-clutch, no-stop, forward-to-reverse shifting for easy movement around trees and shrubs
• Standard electric PTO switch, ammeter and hourmeter
• A separate steering clutch on each wheel for effortless turning
• Automotive-style U-joint to power attachments for quick conversion to other functions
• Your choice of three cutting decks: 32", 38" or 46"
• An optional 6-bushel bagger
• An optional steerable sulky

The Tough Machine That's Right For You—Right Now!
When you buy a Cub Cadet Commercial Mower during this introductory period, you'll take advantage of the special dealer financing that's available for a limited time only.
Circle the readers service number and a Cub Cadet representative will process your response and speed Dealer and Pricing information immediately your way.

Try A Tough, Versatile Cub Cadet Commercial Mower—You'll Appreciate The Difference.

**NEW!**

**SoilMoist**

POLYMER

- Stores water.
- Helps control overwatering.
- Fewer waterings needed.
- Reduces soil compacting.
- Saves you money.
- Made in the U.S.A.

**Soil Moist**™ is a new polymer water delivery system that can be used in potting, transplanting and most commercial applications. It absorbs excess water with an action similar to a sponge. When the surrounding soil becomes dry, the product discharges the water into the soil as needed. Available with or without fertilizer in bulk containers or in colorful retail packages with prepacked displays.

Write or call for free fact sheet.

### Savage Heat Waves, Water Shortages, Parched Farms Year After Year After Year

The National Arbor Day Foundation Urges You to Plant Trees to Fight the Greenhouse Effect

The Earth is heating up. "The Greenhouse Effect," says James E. Hansen, Director of NASA's Institute for Space Studies, "is here... it's time to stop waffling."

A sharp increase in atmospheric carbon dioxide (CO₂) is a major cause. Two things contribute — the burning of fossil fuels and the destruction of forests.

**You can make a difference.** Trees you plant may be our best line of defense. Trees can shade your home in summer, and slow winter wind. While your trees absorb CO₂, they also reduce the amount of fossil fuel burned for cooling and heating.

As a result, your trees can be as effective as 15 forest trees in fighting the Greenhouse Effect.

**Free Booklet.** The National Arbor Day Foundation has published a guidebook titled Conservation Trees which will show you how to plant and prune shade trees and windbreaks.

I'm pleased to offer it to you free of charge. Just return the coupon below and I'll send your Conservation Trees booklet by return mail.

If you believe, as I do, that fighting the Greenhouse Effect is vitally important to our future, send for your free Conservation Trees booklet today.

*Savage Heat Waves, Water Shortages, Parched Farms Year After Year After Year*

*Savages Heat Waves, Water Shortages, Parched Farms Year After Year After Year*
AQUAGRO®

TURNS PROBLEMS INTO PROFITS.

Lawncare and landscape professionals all over the country are using AQUAGRO® soil wetting agents on their problem lawns. They’re applying it on a regular basis to move water deep into hydrophobic and compacted soils, slopes and through thatch. And as a bonus they’re seeing a dramatic improvement in overall turf quality, with reduced irrigation.

Their customers see it too, and are willing to pay for the difference AQUAGRO makes.

Here’s what three AQUAGRO users have to say:

Christopher Sann
Complete Lawn Service
Wilmington, Delaware

“I first used AQUAGRO about seven years ago on a bluegrass lawn with thatch-bound roots. Over a three year period I saw a 50-75 percent reduction in the thatch layer from the bottom; the roots penetrated the soil about three inches and I eliminated the hot-spots. About 90 percent of my customers are on an AQUAGRO program, which I often combine with verticutting. As tough as this summer was, the difference in appearance between treated and untreated lawns was obvious...and that keeps my customers happy.”

Joseph Broyles
Lawn Doctor of Oyster Bay–Syosset
East Norwich, New York

“The soils I deal with are heavy loam often with a compacted layer below the surface. AQUAGRO alleviates compaction by getting water to penetrate this layer. Eliminating standing water helps cure a major cause of fungus diseases...I’ve been offering AQUAGRO Liquid as an optional service for four years; recommending two, sometimes three applications a year. It’s been a solution to a lot of problems, and in some cases helped set me apart from my competition.”

Max Todd
Fairway Lawn Service, Inc.
Sunnyvale, California

“I am using AQUAGRO Spreadable on about 80 percent of my jobs. Drought conditions have made my customers more interested in products that can both reduce water use and keep their lawns alive. It’s clear to me that the wetting agent increases the efficacy of fungicides, soil insecticides and fertilizers...I am able to sell the application as a companion to aerating and my customers recognize that the cost is offset by reduced water use and not having to pay for replanting.”

AQUAGRO moves even the briefest rainfall or irrigation deeper into the soil profile so less is lost to evaporation and run-off. Deeper water penetration also stimulates deep root growth for greater drought resistance.

The Difference Between a Good Lawn...and a Great One.

Discover why golf course superintendents around the world have used AQUAGRO for more than 30 years to solve their water related problems.

Used as directed, AQUAGRO is non-toxic to plants and animals and is biodegradable.

To find out how you can turn problems into profits and make your customers’ lawns the envy of the neighborhood...and your competition.

PROBLEM MANAGEMENT

by Balakrishna Rao, Ph.D.

When wildflowers won't do
Problem: What is an attractive cover for an area that gets highly filtered sun under a forest canopy? Wildflowers won't work. What about grasses or ferns? (Montana)

Solution: From your question, it appears that the forest area is heavily shaded. Reports indicate that under heavy shade (less than 25 percent of the daily available sunlight) it is difficult to establish and maintain turfgrass. Therefore, a shade tolerant groundcover is needed.

There are a number of turfgrass cultivars that adapt well to shade conditions. The important thing is to determine the amount and duration of light filtering through.

In the North, several Kentucky bluegrass cultivars, including Bristol, Glade, Nugget, Touchdown and Birka, have shown good establishment under less than 70 percent shade. Still, these cultivars would do better with more light. In areas with more than 70 to 80 percent shade, tall fescues are a good alternative. Consider using some improved turf-type tall fescues such as Rebel II, Falcon, Mustang, Arid, Jaguar, Cimarron or Bonanza. Some of the fine fescue varieties with good shade tolerance include: sheeps fescue (Bighorn), hard fescue (Biljart and Reliant), chewings fescue (Jamestown and Banner) and creeping fescue (Fortress, Ruby and Ensylva).

These are only some of the cultivars to choose from. I suggest you consult your local county extension office for its list of turfgrass cultivars available for shaded areas. You might also consider some of the following ground covers in addition to turfgrass as a groundcover:

Ground Covers Tolerant of Shady Locations

Ajuga species
Aegopodium podagraria variegatum
Asperula odorata
Convallaria majalis
Epimedium species
Euonymus species
Gaultheria procumbens
Hedera helix
Hosta species
Hypericum calycinum
Liriopis spicata
Lonicera species
Mahonia repens
Mitchella repens
Pachyserpis canbyi
Pachysandra terminalis
Teucrium chamaedrys
Thymus serphyllum
Vincia minor
Xanthorhiza simplicissima

Check with your local cooperative extension service and/or nurseries for plants suitable to grow in your area.

and fine fescues have shown good establishment.

If the shade is above 85 percent, it would be difficult to grow turfgrass. Consider using some improved turf-type tall fescues such as Rebel II, Falcon, Mustang, Arid, Jaguar, Cimarron or Bonanza.

Some of the fine fescue varieties with good shade adapt well to competition, drought tolerance and winter hardiness include: sheeps fescue (Bighorn), hard fescue (Biljart and Reliant), chewings fescue (Jamestown and Banner) and creeping fescue (Fortress, Ruby and Ensylva).

These are only some of the cultivars to choose from. I suggest you consult your local county extension office for its list of turfgrass cultivars available for shaded areas. You might also consider some of the following ground covers in addition to turfgrass as a groundcover:

Herbicide damage to spruce
Problem: Recently your article on herbicides and ornamentals was brought to my attention. What made it particularly interesting was my own experience with Rockland Triple D and Colorado blue spruce.

I am rather conservative when using herbicides, and in this case applied it at about two-thirds the recommended rate to a lawn bordered by 20 evergreen and deciduous shrub and tree species. Nineteen showed no damage, and the lawn lost its weeds. But the Colorado spruce lost many of its first and second year needles. Our extension office examined a specimen and implicated the herbicide. Do you have any details for this species under test? (New York)

Solution: My experience stems from treatments that were applied during the entire growing season starting in early spring and three more times at six-week intervals. Therefore, the treatments were exposed to dry and/or wet conditions during the season.

The treatments were made using Davey’s sprayer unit and application technique, which provides minimum drift, and were applied about one foot from the ground and four to six inches from the dripline of the spruce plant.

The delivery system has good control over placement and the spray mix can be easily diverted away from the non-target plants by simply twisting the spray wand. This system allows the applicator to apply close to non-target plants like spruce. The plants were seven to eight years old with good root growth.

Your problem may be caused by moisture stress, application method and/or chemical composition of the materials used—ester formulations are more volatile than amine formulations. We have used amine formulations of herbicide which are comparatively safer.

Since you have experienced injury even at two-thirds the recommended rate, I suggest you evaluate the weather data around your application period and application method as well as the chemical composition of the product.

Wolmanized lumber no problem
Problem: Is it safe to use pressure-treated wolmanized lumber in the garden? (Illinois)

Solution: I have not found any literature that specifically addresses your question, but from my observations I do not believe wolmanized lumber is a problem.

Wolmanized lumber is currently being used in many landscape designs. I have observed plants adjacent to the lumber in nursery and landscape settings doing well. Several of these areas were well irrigated and, if leaching of chemicals was a problem, it should have occurred. I have not seen any evidence to show that.

You may want to grow plants surrounded by wolmanized wood in a smaller area to first see if you get any injury.
A seeder for tight spots and small lawns.

The Ryan® Spotseeder is ideal for lawn repair.

Nothing lets you renovate lawns as effectively or economically as the Ryan Spotseeder. Its 20-inch width lets you handle small yards, patch work, and hard-to-reach areas with greater ease than ever before. A fully adjustable seed delivery system drops any kind of grass seed in front of the vertical cutting blades for better seed/soil contact, facilitating a higher germination rate compared to drop-type and broadcast seeders.

Cover more ground more quickly.

The Ryan Spotseeder gives you $\frac{1}{8}$-inch slits in the soil on 2-inch centers, which works well with all types of grasses, allowing you to have one pass seeding. The standard reel or one of the three optional reels combine to deliver high quality seeding and dethatching in a wide range of turfgrasses. The Ryan Spotseeder is the easy answer to lawn repair.

To see just how easy the Ryan Spotseeder can make your next renovation, contact your Ryan dealer or call toll-free: 1-800-228-4444.
"It’s my personal honor to introduce this tall fescue — one of the finest on the market today."

Jon Loft, Chairman of Lofts Seed Inc.

More and more turf professionals are turning to fescues. To meet the demand, Lofts introduces an exceptional variety. Tribute, named in honor of the late Peter S. Loft, is a product of the same breeding program that produced Rebel II. And it shares many of the outstanding qualities that are making Rebel II so successful:

- Attractive dark green color
- Fine-leaved, dense growth
- Minimal thatch buildup
- Improved drought and heat tolerance
- Resists Fusarium Blight Syndrome
- Well-adapted for shade use
- Withstands foot traffic better than Kentucky bluegrass

Try Tribute — the exceptional new tall fescue from Lofts.

Tribute was named to honor the memory of Peter S. Loft. Royalties from sales of Tribute will be donated to the Peter Selmer Loft Memorial Scholarship Fund.
