

Project managers Steve Plummer (left) and Butch Foster look over water irrigation plans for the 18-hole Tustin Ranch course.

BLENDING AESTHETICS WITH CONSERVATION

Today's irrigation systems give landscape managers the best of both worlds- efficiency and beauty.

Planned to conserve and built to hazard. That's precisely what America's top golf course designers had in mind as they planned and constructed the irrigation system for The Irvine Company's new \$10 million, championship-quality Tustin Ranch Golf Course.

Conceived by world-renowned golf course architect Ted Robinson, the 18-hole course's network of lakes, cascading waterfalls and meandering waterscapes will not only serve as scenic and strategically placed water hazards, but will also provide a functional irrigation system that will ultimately conserve millions of gallons of water annually for Orange County.

"The lakes scattered around the course will provide golfers with hand-

icapping, yet beautiful obstacles while they serve the community and the county by helping to save precious water," said Robinson, who has developed more than 120 courses worldwide during the past 25 years. "By using the lakes as reservoirs instead of continually pumping water into the area, we can help conserve several thousand gallons of water every week."

Not just deserts

Robinson pointed out that using lakes as water-saving elements at golf clubs, a technique first developed in the design of desert courses, is becoming more common in water-conscious areas such as Southern California. Courses typically require a substan-

tial amount of water which can be wasted through improper in-take levels, poor drainage, overflows and overwatering. The system in the Tustin Ranch Golf Course helps eliminate water loss by hydraulically monitoring flows of reclaimed water that is stored in lakes which are lined to prevent seepage, he said.

"The system is extremely efficient because the only way water is lost is through evaporation," explained Robinson. When fully operational, the golf course irrigation system will in-take a continual flow of reclaimed water from two large reservoirs at the Michelson Reclamation Water Plant in Irvine each day for nine hours, according to John Economides, senior engineer at the Irvine Water District

who helped plan the system. During this nine-hour period, as much as 1,000 gallons per minute will be piped into the lakes. Once in the lakes, water will be pumped into the sprinkler system and will then be used to water grass, trees and natural foliage throughout the area.

Though this reclaimed water is purified, regulations prevent it from being used as drinking water, Economides said. During the 15 hours that the system is not irrigating, water flows back into the lakes, a process

“The course’s reservoirs help alleviate some of our difficulties in serving the public during peak demand periods.”

-John Economides

which keeps debris such as dust and fallen leaves from stagnating in the water.

According to Economides, this refilling process also helps relieve the strain on the water company. “The course’s reservoirs help alleviate some of our difficulties in serving the public during peak demand periods,” said Economides. “Because the course has a large water storage capacity, we can decrease the strain on the community’s waterlines by redirecting the main flow to meet needs in other parts of the local area.”

Equipment for the turf care professional.

Olathe

**Setting the standards
for sweepers.**

■ Feel like your grass clippings may be getting ahead of you? Try this model 54HL 5' self-propelled sweeper unit with high lift for large area cleanup. 24hp engine, hydraulic-drive, with optional thatcher, sweeps wet or dry materials using 'sure-grip' rubber fingers.

■ Olathe personnel have been helping solve leaf/debris problems for over 30 years. Ranging in size from our model 42 (36" wide, 5hp tow-behind) to the large area tow units which are the 166e, the 166hl and the 65 PTO (all with 5' width, 5 cu. yd. capacities). Ground and high lift models.

Model 166E PTO powered tow-type

Model 65 PTO-powered 5' width

Model 166e 5' hydraulic ground dump

Model 166hl 5' width, 8 1/2' lift

Model 42 tow-type, 1/3 cu. yd. 5 hp, 3' swath, finger or brush reels.

Model 41MVS - 66" wide tow-type, self-contained with 7 cu. yd. capacity

Keeping water clean

To maintain the purity and luster of the waterscapes, the course's in-take system includes hydraulic jets that propel water up to the top of waterfalls where it cascades slowly down to the lakes and is then recycled back into the jets. This hydraulic system is also used within the lakes to force movement in the water and to provide an ozonation treatment, a process that helps keep the water clear, bacteria- and algae-free.

Although water conservation is of utmost importance, the Tustin Ranch course's water elements have also been developed to reflect the beauty and spirit of the local community and to provide the ambiance of an upscale, top-quality golf course, according to Jim Colbert, head of Jim Colbert Golf Inc., Las Vegas, the company that is overseeing construction of the course and will manage it once it's completed.

“The challenge of the Tustin Ranch project has been to blend a water-saving irrigation system with a well-designed, attractive series of water hazards,” said Colbert, who has helped formulate several professional Golf Association Clubs along with providing commentary for ESPN's live golf tournaments.

“What we've nearly finished creating is a handsome, manicured lake and water conservation system that imparts the feeling of a world-class golf course that offers area residents a quality club where they can enjoy their leisure time.”

Scheduled for completion this summer, the 160-acre course will include a clubhouse, driving range, putting green and other related facilities. The course is the first of several golf courses planned by The Irvine Company in new residential communities in Laguna Canyon, Orange and along the Irvine Coast. The course will complement the Tustin Ranch, a 1,740-acre community along the eastern border of the city of Tustin. **LM**
