IDEAS OF THE FUTURE AT WORK TODAY

**MANPOWER
SHORTAGE**

*Two years after the
Salt Creek flood,
Butler's fairways
look terrific!*

Oscar Miles, CGCS
Butler National GC
Oak Brook, Illinois

Seventh fairway during the Western Open, 1989.

Penneagle and Oscar Miles make Butler National GC 'picture perfect' again!

"Before the 1987 Western Open, Butler National was primed and trimmed to perfection for its date with the pros and television cameras" says Oscar Miles, "then 9½ inches of rain drenched the course. The resulting flood deposited tons of silt that dried and destroyed the grass beneath.

"After the cleanup that required thousands of manhours, high pressure hoses, squeegees and helicopters for drying; the process of reseeded began.

"Based on Penneagle's excellent performance before the flood, I chose to reseed with this bentgrass. After two years, the new stand appears better than before. With our time-proven maintenance program, we mow our fairways at 7/16" and have a good working layer of Penneagle with virtually no thatch.

After two years, Penneagle produces a good working layer with no thatch buildup.

"In preparing for the 1989 Western Open, we compared the course to a Van Gogh painting, and the crew's efforts were to enhance the work of art by meticulous touchup on the frame. The result was a 'picture perfect' course that caused the players and announcers to rave.

"Now if I could only get the announcers and writers to call 'Penneagle' by name ... you can't plant *just any* bentgrass and expect it to perform like Penneagle."

Seventh fairway before the rain delayed 1987 Western Open.

How to survive in the desert on only 5 reels a day

The desert is a pretty forbidding place for golf. But thanks to irrigation and the work of knowledgeable superintendents like Robert Stuczynski the desert area around Palm Springs, California, has become one of the country's golf meccas.

Stuczynski supervises maintenance at the 36-hole Ironwood Country Club in Palm Desert, California. And, for the last seven months, he's been using a 5-reel John Deere 3325 Professional Turf Mower on all 36 of his fairways.

"Equipment has to be tough to survive out here," says Stuczynski. "The temperatures, the terrain, the rocks—they're all hard on it.

"Our 3325 works 10 hours a day, seven days a week mowing all our fairways. We've had it for about seven months now and it's held up very well. The quality of cut has been excellent. In fact, it's doing such a good job we'd like to get another one.

"I went out and talked to other people who already owned John Deere equipment before I bought my 3325. People who make their living with equipment just like I do. I heard a lot of good things about equipment quality, durability and parts support. And, after the test we've given it here, the 3325 has certainly lived up to that reputation."

Talk to your John Deere distributor today for information on all we have to offer. Or write John Deere, Dept. 956, Moline, IL 61265 for free literature. We know, like Robert Stuczynski, you're going to like what you see.

This John Deere 3325 Turf Mower mows all 36 fairways every day at Ironwood Country Club in Palm Desert, California.

Nothing Runs
Like a Deere®

On keeping your business up to date

Once upon a time, it was good enough to keep up with the Joneses. As long as one yard looked as good as the next, the owners were pleased.

But that's not the case in this competitive world today. Homeowners now want more.

The same holds true with your lawn or landscape business, with your campus or athletic field. And, beginning with this issue, LANDSCAPE MANAGEMENT hopes to provide you with information designed to keep you ahead of your competitors, no matter who they are.

By now, you've seen the "Toward 2000" banner on our cover. Get used to it; it'll be there quite a few times in the coming years. Its purpose is to alert you to an article that could provide you with the competitive edge to prosper in this dynamic industry.

As we head into the 1990s, new chemicals, innovative equipment and unheard-of business techniques will take the forefront—and readers of LANDSCAPE MANAGEMENT will be the first to hear about them, on our pages.

Over the years, LM's reputation as being first with the news-that-counts has grown among readers. According to readership studies, when you want to know what's going on in the green industry, you come to us. With this new series—the first and only one of its kind among industry trade publications—we are hoping you continue to "open us first."

We're starting the "Toward 2000" series off with a bang. In this issue, you can read about the impending personnel crunch facing the landscape and other labor-intensive industries in the next few years.

We'll attack other current topics in the months ahead, ranging from water conservation techniques to the threat of government legislation. Along with alerting you to problems your business might encounter, we hope to offer possible solutions. In short, we'll continue doing what we've done best in the past.

Staff members—managing editor Will Perry, associate editor Terry McIver and myself—begin this project with unbridled enthusiasm. We hope you enjoy reading LM in the coming months as much as we look forward to writing it. And we also hope that, when called upon by us, you can help find solutions to the problems that the industry will face in the coming decade, and on...Toward 2000.

FOR WINTER OVERSEEDING, LAWN RENOVATION, ATHLETIC FIELDS AND PARKS.

Alliance

BLEND

*Dark Green, Drought Tolerant, Insect
and Disease Resistant Turf... Naturally!*

Citation II

- Contains a high level of endophyte that enhances insect resistance.
- Very good resistance to leaf spot, brown patch, crown and stem rust, tolerance to red thread.
- Rich dark green color with good mowing quality.
- Excellent heat and wear tolerance.

Saturn

- The number 1 variety in the 1986 National perennial ryegrass trial.
- Dark blue-green colored low growing variety.
- Improved heat tolerance, and resistance to leaf spot, brown patch and stem rust.
- Very good performance in California overseeding trials.

Charger

- Improved resistance to leaf spot, brown patch, stem and crown rust. Tolerance to red thread.
- Good performance under low fertility and improved color and growth under cool weather conditions.
- Early maturity and tested as 2HH.

246 Sunrye

- Very dark blue-green colored turf-type variety.
- Dwarfier growth habit than other varieties in overseeding trials in Palm Springs area.
- Improved resistance to leaf spot, brown patch, and stem rust.
- Contains a moderately high level of endophyte to enhance insect resistance.

Here's proof that Typar Pro Landscape Fabric is easier to install.

We cut this piece of Typar® Pro Landscape Fabric to show what you can't do with the others.

Like cut quick slits for plants to pass through. Or fast curves that follow landscaped contours.

Typar is easily cut, lightweight and less bulky. So it's faster and cheaper for you to install.

And it's surprisingly tougher. With rugged polypropylene fibers that resist tearing, even under stones, gravel, patios and sidewalks. Typar is also porous, so air, water and nutrients can pass right through. Your landscaping projects

look healthy as well as handsome.

So save time and labor while you control weeds, drainage, soil erosion, and heaving of walks and patios.

Get Typar Pro Landscape Fabric. And start cutting corners the easy way.

To apply granular XL is to excel in your preemergence weed control.

With just one application, you can keep your ornamental and landscaped areas free from many grass and broad-leaf weeds, for six to eight months.

And because XL contains Surflan®, your control's also stronger than Ronstar® against crabgrass. And just as strong or stronger against many other weeds. At less cost, too.

Not only that, XL stays put. And once activated, it forms a barrier to prevent weed breakthroughs better

and longer than anything else. Most importantly, XL is gentle on a broad range of ornamental species. Even when it's applied to wet foliage.

So excel with XL. See your Elanco distributor. Or call toll-free: **1-800-352-6776.**

LANDSCAPE MANAGEMENT

ASSOCIATIONS

Research a key to keeping the green industry green

NATIONAL REPORT —

Major organizations within the green industry are realizing how important research money has become.

On one hand, the Golf Course Superintendents Association of America (GCSAA) recently contributed \$25,000 to the USGA/GCSAA Turfgrass Research Committee. On the other hand, the American Society of Nurserymen (AAN) has told the House and Senate Appropriations Committee that more money must be made available for agricultural research programs.

The GCSAA's money will support ongoing scientific work on new turfgrass varieties that would require less water and be more disease resistant.

GCSAA President Dennis D. Lyon made this observation at the annual USGA/Golf Writers Association of America banquet held during the U.S. Open in Rochester, N.Y.

William H. Bengeyfield, national director of the USGA Green Section, noted that more than \$2.8 million has been distributed by the committee since 1983. "We thank GCSAA for the research funding they provide, and we appreciate the time people like (GCSAA vice president) Jerry Faubel, Lyon and (executive director) John Schilling contribute to the committee."

"GCSAA sincerely sup-

Chinese interns look over seed samples at Jacklin Seed in Post Falls, Ida., where research is a continuing project.

ports the USGA turfgrass research project." said Lyon. "We look forward to working together with the USGA on other projects in

the future."

AAN representatives, appearing in Washington, D.C. recently, cited a report by the U.S. Department of

Agriculture and Economic Research Service. The report estimated 1987 grower cash receipts from environmental horticulture crops at \$4.3 billion.

"Due in part to this continuing rate of growth," said Duane Jelinek, AAN director of horticultural research, "tremendous potential exists for increased job opportunities as well as positive impacts on the environment."

However, the AAN said it is aware of federal deficit woes, and insisted it doesn't want a handout.

"We have restricted our recommendation to maintaining the integrity of research programs which are absolutely vital to the nursery industry," said Ben Bolusky, AAN's director of government affairs.

Of greatest concern to the association is continued funding for its plant science research programs, the cooperative state research service and extension services. □

GOLF

Designers should respect nature, Dye says

CHICAGO — Today's golf course designers face many new challenges, thanks to heightened concerns about environmental preservation, says Pete Dye, president of the American Society of Golf Course Architects (ASGCA).

Dye says designers must

comply more with standards relative to wetland preservation, use of freshwater supplies and the impact of pesticides on groundwater. And while he supports such standards, he believes the approval process can defer a project for years, and hold up the nec-

essary permits until issues can be studied completely.

For that reason, Dye says ASGCA members are working to identify the problem areas and propose positive alternatives.

"The ASGCA Foundation, for instance, recently

continued on page 11

DESIGN from page 8

commissioned a study by Dr. Martin Petrovic of Cornell University on the effects of nitrates on groundwater." That report was to be available in May.

Dye believes more concrete data is required to support the idea that properly maintained facilities embellish, rather than destroy the environment.

"No issue has raised the level of consciousness higher than the subject of wetland and marshland boundaries," says Dye. "Thus, integrating wetlands into the framework of a Master Plan without jeopardizing the natural habitat or course playability has become a major challenge to golf course architects."

Dye says wetlands have become a high priority of regulatory agencies. That concern and subsequent public hearings have resulted in a slower permit procurement process.

"Wetlands have been reduced to less than 99 million acres from the 215 that existed in 17th century America," says Dye. "So it is imperative we protect a valuable natural resource." □

NEXT MONTH:

Bio-control of turf pests

TREES

Universal Studios gets a giant

ORLANDO, Fla. — An extraordinary project came Ed Yates's way recently: uproot, transport and replant a 38-foot Phoenix reclinata palm tree.

Yates's Lakeshore Tree Moving was contracted by Universal Studios to move the tree from an area nursery to the movie company's soon-to-be-completed Orlando lot. Developer Marshall Cohn had purchased the nursery land, and was looking for ways to clear it for a condominium complex.

Moving the 43-year-old tree 13 miles required a lot of planning. "We had some small problems, but we solved them as they came up," says Yates. "We started by going up into the tree with a sky reach to clean it. We then dug a 12-inch trench around the ball, and filled the trench with sawdust. We cut the ball in two halves with chain saws and cross-cut saws."

The police escort would not be available for two days, during which time the tree ball was insulated and received constant watering. Yates says replanting the two halves exactly as they had originally been took about two hours

Universal Studios/Florida opens in May, 1990. □

Workers support a lower trunk as one half of a 38-foot highpalm tree is positioned at Universal Studios in Florida.

INDUSTRY

Ransomes consummates Cushman buy; also purchases Salsco line of products

Adam: Cushman, Ryan and Brouwer will continue to be run independently.

Rafos: Partnership will enhance Ransomes' domestic and international markets.

JOHNSON CREEK, Wisc. — Landscape managers will still be able to purchase Cushman equipment from their usual distributors despite a major deal in which product lines changed hands last month.

Ransomes PLC added to its influence on the turf equipment market by first purchasing products previously marketed by Salsco Inc. Then, it purchased Cushman from OMC Lincoln for a reported \$150 million.

The Cushman group includes Cushman turf vehicles and mowers, Ryan aerators and sod cutters, and Brouwer mowers, vacuums and sod harvesting equipment. The group will be run as an independent entity under the Ransomes America umbrella.

"Cushman will operate as before," says Helmut Adam, president of Ransomes America. "It is a well-run company with a good name. We are not going to change something

RANSOMES from page 11
Cushman."

Manufacturing and marketing of Cushman products will continue to operate out of Lincoln, Neb. Stuart Rafos, president of Cushman, says the sale aligns Cushman with a business partner that is close to its core business. Rafos also notes that Ransomes has the international marketing expertise and organization to substantially extend Cushman's growing international business and enhance its position in the

domestic market.

Rafos believes Cushman's annual sales of \$100 million will double in the near future. The company is already making plans for increased production facilities.

Under the agreement, Cushman's management team and dealer network in the U.S. and Canada will retain the status quo.

It's not the same with Ransomes' "Turf Renovation" line of equipment, purchased from Salsco Inc. for a reported \$2 million.

Those products—which include walk-behind, tow and riding core aerators; a slicer/seeders; a walk-behind dethatcher; self-propelled drop spreaders; tailgate and towed truck loaders and a walk-behind leaf blower—will now be marketed through Ransomes dealers.

Despite the sale, Salsco plans to remain in the turf field. President Sal Rizzo says the company will introduce new products at the upcoming PLCAA show next month. □

TURFGRASS

Pre-grown grass to enter the U.S.

ESSONE, France — A new pre-grown grass said to be weed- and disease-resistant is being marketed in the U.S. by France's Darbonne Corp.

According to press reports, Minute Grass is more flexible and durable than sod grown in soil, and is said to remain green year-round.

Minute Grass uses a technology that involves mixing a customer's choice of grass seed with bark containing natural resins. The mix is then spread mechanically over a perforated micro-plastic film. Because Minute Grass is grown densely above the surface, it is impervious to weed and other impurities, according to Darbonne Corp. Minute Grass can be grown on tile, concrete, sloped hillsides, balconies and patios. Darbonne reports that it is three times lighter than sod, three times more prolific in growing season and can be stored under 29°F refrigeration for up to six months.

For more information on Minute Grass, contact Darbonne Corp. at: 6, BD, Joffrey, Milly La Foret, Essone, France 91490. □

Bob Felix: dissatisfied with OSHA's Vertical Standard

TREES

NAA is set to battle OSHA's regulation in Washington soon

Members urged to support NAA

AMHERST, N.H. — The National Arborist Association is preparing to meet with representatives of the Occupational Safety and Health Administration in Washington next month to challenge OSHA's proposed Vertical Standard regulation.

The NAA will give testimony at public hearings in Washington on Nov. 28 and in California Dec. 12.

By late August, more than 75 firms had expressed dissatisfaction to the regulation with OSHA, according to NAA executive vice president Bob Felix.

The regulation, OSHA Proposed Sec. 1910.269 Electric Power Generation, Transmission and Distribution Standard, "is a very important matter for the entire tree care industry," says Felix.

According to the NAA, undesirable aspects of the regulation include:

- barring line clearance tree contractors from performing storm work;

- requiring all crews of two or more employees that work on a tree any branch of which is within 10 feet of a power line to have at least two crew members trained in CPR;

- allowing only a line

clearance tree trimmer to do work on a tree that has a branch within 10 feet of a conductor;

- requiring all tree trimmers working trees proximate to overhead conductors to be tied into the tree once they reached four feet above ground; and

- requiring a chipper to be treated as energized if "it is possible" that the truck boom can be brought within 10 feet of an overhead line.

NAA members are urged to support the organization in its upcoming efforts. Write to the NAA at The Meeting Place Mall, Route 101, P.O. Box 1094, Amherst, NH 03031-1094; (603) 673-3311. □

TURFCO EDGE-R-RITE

MULTI-PURPOSE TURF EDGER

Just like a small sod cutter, the Blade does not spin, the oscillating motion does not throw debris.

Self-propelled and push models available.

Rugged design for commercial use.

Optional Blades:

Disc Blade for cutting straight edge along sidewalks and driveways.

Right Angle Blade for golf course sand traps, and flower beds.

"V" Blade for removing a strip of turf along a sidewalk.

SHORT CUTS

THOSE DARN LAWYERS... may be standing in the way of research to determine athletic field hardness, says **Dr. Bob Carrow** of the University of Georgia. Carrow told attendees at the Sixth International Turfgrass Research Conference that research is stalled because no one wants to stick their necks out by saying a field is safe, then be called into court as an "expert witness" if and when an athlete is injured.

LOOKING FOR ALTERNATIVES... in available grass species was the goal of a recent study at Ohio State University. The North Central Regional Turfgrass Research Group—led by **Jill Taylor, Jim Simmons** and **Karl Danneberger**—initiated a study and evaluated the use of alternative grass species for use in the Midwest. The group believes some of the species would do well in low maintenance areas. Sixteen species were evaluated on a scale of 1 to 9, with 9 being the best score. Best color (all readings are at a height of 2 inches) was recorded by Alta tall fescue, 6.8. Highest density grass was Colt rough bluegrass, 7.5; best in the quality category was again Alta tall fescue, 6.3. Alta recorded the best total score at the two-inch height, with 19.4 out of a total 27 points.

MORE RESEARCH... Other recent OSU experiments included an attempt at tall fescue control in Kentucky bluegrass turf beyond the usual spot treatments. **Drs. John Street, Bill Pound** and **Jim Simmons** applied two formulations of Lesco TFC to an established tall fescue stand on April 25 and June 1. Applications of 2 oz. and 4 oz. of active ingredient were made to an established Kentucky bluegrass cultivar on May 1. In general, the the 2 oz. rate provided 90 percent control, and the 2 oz. + 2 oz. and 4 oz. rates provide control at 95 percent. There was no difference in percent control between the two TFC formulations. Kill of tall fescue required six to eight weeks. Discoloration of tall fescue began 10 days after treatment.

TURF FOR PEACE... "Today, the more civilized and peaceful a country is, the more [formal] turf is used," says **Dr. Fumio Kitamura**, organizing committee chairman of the Sixth International Turfgrass Research Conference. He adds, "When our lives become more comfortable, the importance of grass increases as a place where we can get close to it, enjoy it, play and relax on it. Turf is now a symbol of civilization, peace and affluence."

A real 'Easy Rider'

MILWAUKEE — Bill Smithyman, landscape operations supervisor for the City of Milwaukee (Wisc.), is the original "Easy Rider." He spends more time touring the streets than Peter Fonda and Dennis Hopper did in the 1969 motion picture.

Milwaukee, you see, has more than 119 miles of highway medians, most about 20 yards wide, 95 percent of which are irrigated. That's more than 450 acres, and it's Smithyman's responsibility to keep all those shrubs, trees and grass plants green.

He assigns one person to every two miles of boulevard. That person is in charge of weeding, edging, cultivating, picking up debris and manually turning irrigation on and off. Thirteen mowing crews of two

to three persons each supplement the one-person maintenance crews.

"Milwaukee's had this system for eons," the veteran landscaper explains.

In 1988, Smithyman's 160 summer employees planted 424 trees, 6,375 shrubs and evergreens, more than 180,000 annuals and almost 6,000 perennials and bulbs.

"If you look at a landscape and you just have turf that is well maintained, it looks great," Smithyman philosophizes. "But trees are a major-profile plant material. They are also the easiest and least costly to add. Then, too, shrubs are another element in your profile."

Smithyman has found that pinching a penny here and there pays off with the city administration when a

Milwaukee's Bill Smithyman at a flowerful boulevard.

special project is requested.

"We have been very fortunate," he notes. "That's not to say there aren't programs that couldn't use more money. But we operate on a first-class basis and it's paid off when it comes to bottom-of-the-line budget. I believe it's a result of our professionalism."

Plenty of chances to save money exist within the confines of the government

structure. For instance, a shredder was borrowed from Milwaukee County last year to shred leaves for composting. "We've got some pretty good stuff," Smithyman notes, saving the city money it would've spent on both debris disposal and buying mulch.

Fifteen miles of drainage slopes are mowed by the department's Hustler 602 mowers. Time and labor are

A black and white photograph showing a close-up of a hand holding a hammer, positioned as if about to strike a nail. The hammer is dark and the nail is light-colored, set against a plain background.

Your old fertilizer formula may get the job done.

Most distributors can only offer you stock answers. You have to choose from the product line they have in-stock.

But DOTS offers you something uniquely different.

Your DOTS distributor will provide custom-blended formulas to match your particular soil needs, climate and grass conditions.

charged back to the Sewer Department. More and more, Smithyman's crews help with snow removal in the winter. The boulevards are watered three times a week with water from Lake Superior; water bills are based on acreage.

Most importantly, training and incentives are a big part of keeping valuable employees.

"Bob Skiera, our city forester since the early 1970s, has a philosophy of bringing in the best people at all levels," Smithyman relates. "That gets back to professionalism."

Smithyman's smile reeks of pride. And justifiably so, judging by the work his department does.

"We want to enhance the quality of life in the city of Milwaukee. We feel that we're meeting that goal; it's a good place to live.

—Jerry Roche □

Forging a country club image

NORTH OLMSTED, Ohio — Bill Prest's current mission in life is a worthy one: to create a country club image while charging a public golf course price.

Prest is the superintendent of Springvale Country Club in this Cleveland suburb. He wants to give the club a distinctly professional look, regardless of the number of Sunday golfers who walk his fairways.

Part of the image upgrade has been accomplished by gradually adding sand traps. "There aren't many public courses with extensive sand," explains Prest. He is placing the traps in such a way that they don't slow down play. "There's nothing worse than a four-hour round of golf that turns into six hours," says Prest. "We've placed these fairway traps

Prest: "more players through each day"

so that 90 percent of the play doesn't hit them. They're more cosmetic. At the same time, traps will be in play for lower handicapped golfers."

Prest installed nine traps this past summer, which will bring the course total to

40. The course had 18 when he became superintendent 23 years ago.

Prest has done more than just add sand to the course. He began an overall renovation program five years ago which included an aggressive schedule: "300 new trees, 15 traps and four or five new tees," says Prest. "We've also started renovating the irrigation system and have done some mound building." Dirt for the mounds came from a company working on a housing project next door to the club. The developer gladly supplied Springvale with 100,000 yards of topsoil rather than pay for hauling it away.

Prest, a graduate of the University of Massachusetts, says all renovations are in line with presenting a

DOTS custom-blends will do it perfectly.

providing helpful and timely advice for your concerns. So why use a standard product, when you can use a fertilizer program created specifically for you?

For more information on the DOTS

fertilizer and pesticide program, call 1-800-345-DOTS for the DOTS distributor nearest you.

At DOTS, we help your turf look its best. So you look your best.

Circle No. 112 on Reader Inquiry Card

Reader disputes architect's rule

To the editor:

In the July 1989 issue under your column "As I See It," you seem to draw the conclusion that the landscape architect is the project leader as it relates to landscaping and irrigation.

It is my experience in doing major landscape contracting that the landscape architect's roles are limited.

In theory, his work is completed (early on), unless he has a per diem contract with the builder.

I consider the contractor to be the key in completing a job in a fast, efficient and practical way to insure the builder's advertisement specials and certificates of occupancy.

We never install materials that are not specified by the builder. But to get hold

of a landscape architect (since they consider us to be beneath them) is like getting hold of the president. Some architects set themselves up on a pedestal. Because they wear a suit and tie and sit in an air-conditioned office, they have no concept of the 32°F in the freezing rain or 95°F without the wind blowing.

I would suggest that architects do not take an active part in projects, and force contractors to make their decisions on the spot in order to satisfy their customers who are paying them. We are being paid by the customer and not by the architect; therein lies the key! If the landscape architect wanted to stop a project, the contractor would be blamed.

Wildflowers work in shade

To the editor:

In the July "Problem Management," Dr. Rao was not correct when he agreed that wildflower seedlings or sod cannot survive in the filtered sunlight of a forest. He accepted the Montana reader's comment that "wildflowers won't work" without questioning the statement.

Wildflower germination in filtered sunlight will occur, assuring reasonable soil conditions and some level of moisture.

Columbine, ox-eye, coreopsis and corn poppy are among those which can survive in less-than-ideal (but not impossible) low level sunlight.

We can offer Dr. Rao a few jobs, some recent, where success on a scale of 1 to 10 has been a 6 or 7. This

is not out of the range of acceptability, since turf (or ground cover), in many cases, does not reach this level under more ideal conditions than those described.

We, however, have always appreciated the good doctor's sensible and knowledgeable comments in the past and always look forward to his management page.

Correcting desert plant references

To the editor:

Thank you for the beautiful two-page spread on the landscape project at Sun Valley, Ariz. in the June issue. The photo on page 34 really shows off the Sonoran Desert in all its beauty, and one can envision the highway (shown on page 35) transformed into a setting of equal splendor.

Our desert plants are indeed exotic. So exotic, in fact, that your copy editor, in condensing a few paragraphs from my original story, combined my descriptions of the yucca and ocotillo. Many of your readers who know the desert will catch the error.

The plant you have described as a yucca is the ocotillo pictured on page 34 to the right of the photo; it's the spiny upright plant in the foreground with orange plumes. A yucca, on the other hand, is the type of plant you may recognize as "Spanish bayonet," which is one of its commonly-distributed varieties.

Thank you for the opportunity to write for your magazine.

PREST from page 17

country club image. "We were a flat, wide open, boring golf course," he remembers. "A lot of young public golf courses in this area are like that." Prest has installed wall-to-wall cart paths, connecting all but two holes. A great advantage in wet weather, the paths enable Springvale to run carts on wet days when other courses dare not tear up the fairways with tire tracks. And carts are mandatory on weekends.

"That has allowed us to get more players on the course at one time and get more players through."

In parts of the course, Prest has gone to low maintenance flower beds, longer grass reminiscent of the Scottish courses, and mulch. Low maintenance areas also serve to divide the course into playable and out-of-play areas.

He's even started a small tree farm in a low maintenance, out-of-play area.

How's that for initiative?

—Terry McIver □

ADD MUSCLE TO YOUR WORK FORCE, GET A BIG BOSS

The term "labor-saving device" might have been coined to apply to the Polaris Big Boss. It's your worker of choice when human hands, arms and backs aren't quite enough, but a pickup or dump truck is too much. And it's a terrific recreational vehicle as well, able to haul an entire campsite in a single trip, or supply a remote hunting cabin with food and equipment for a week. For farms, construction

sites, back yards, or the back woods, a Big Boss gives you the extra strength you need to do what needs to be done.

Warning: ATV's can be hazardous to operate. For your safety: Never carry

passengers, avoid excessive speeds, and be particularly careful on difficult terrain. Polaris ATV's may not be ridden by people under 18 years of age. Polaris recommends that all ATV riders take a training course. For safety and training information, see your dealer or call Polaris at 1(800)328-9975. (In MN, 1(800)247-6670).

POLARIS
Believe It.

WHITHER COMEST THE PEOPLE?

Look at workforce projections for the 1990s. What do you see? A lack of line-level employees, the green industry's bread-and-butter.

by Jerry Roche, executive editor

Rosabeth Moss Kanter of the Harvard University Business School has issued a stern warning to American business via *Business Month* magazine:

"Companies will have to figure out how to make work better. They will have to think of ways to give people careers they can be proud of."

This is the problem confronting the green industry as it heads into the 1990s. Why? Consider these facts, so boldly suggested by *Fortune* magazine:

- "The employment rate in the '90s will be lower than in the '70s and '80s.

- "As baby-boomers age, they will leave a demographic vacuum in their wake, confronting managers with a scarcity of entry-level job seekers.

- "Growth of the workforce will slow from 2.4% per year in the '80s to 1.2% in the '90s.

- "The Hispanic population will grow by 33%, the U.S. population by less than 10%.

- "U.S.-born white males will make up only about 15% of the net increase in the labor force.

- "Companies that can't learn to attract women, blacks, Hispanics or Asian men will face a shrinking pool of desirable employees."

The pendulum shifts

During the last 10 years, the green industry used much of its resources to address legislation affecting pesticide use and workers' rights. (Rightfully so.) But the 1990s bring new problems.

"It's a social issue, not a governmental one," says Alan Shulder, executive director of the Professional Grounds Management Society (PGMS). "How do we get the young people? They can work at McDonald's for \$4.50 an hour; they're in an air-conditioned setting with flexible hours. In the green industry, they

The aging baby-boomers have left a demographic vacuum in their wake, leaving many in the green industry wondering how they'll attract tomorrow's employees from a shrinking work force.

would be working in the summer heat at \$4.00 an hour and they'd have to be to work at 6 or 6:30 a.m.

"The industry is just beginning to realize it's got to be competitive. Did you know that in some parts of the country, you have to pay \$7.50 an hour just to hire a body?"

Shulder's key point: green indus-

try businesses compete not only with their kin for good workers, but also with other labor-intensive industries.

According to *Business Week* magazine, the National Restaurant Association (McDonalds and others) and the National Retail Merchants Association (K mart and others) both predict radical employee shortages in the

ACCLAIM® KILLS CRABGRASS ALL SEASON LONG.

FEBRUARY

Use ACCLAIM® 1EC Herbicide **instead of a pre.** Don't gamble that your pre will still be around to prevent crabgrass

emergence—skip it entirely. And in new or reseeded turf where pre's aren't an option, ACCLAIM is ideal.

Skip your pre!

MARCH

You can skip the first pre treatment and save early round costs. Use ACCLAIM later in the season along with your usual pre.

Killed postemergence.

MAY

Use ACCLAIM postemergence on crabgrass along borders, sidewalks and ornamentals where you know populations are heaviest. This is the ideal way to prevent callbacks later, and this program costs less than 90 cents a lawn.*

(*Assumes 1500 sq. ft. of treated area.)

Zapped in May!

JULY

Retain customers by killing crabgrass before it becomes a callback. ACCLAIM kills crabgrass with just one application, and it won't harm your turf. It's also a great tool for winning new customers.

Eliminate crabgrass escapes.

Read and follow label directions carefully. ACCLAIM is a registered trademark of Hoechst Celanese Corporation. The name and logo HOECHST are registered trademarks of Hoechst AG. The name and logo ROUSSEL are registered trademarks of Roussel Uclaf S.A.

JULY

ACCLAIM® 1EC Herbicide is a safe, effective product for postemergence control of crabgrass. And you can use it anytime after the one-leaf stage.

Whatever your current program, remember that no other herbicide gives you such flexibility in controlling crabgrass. Make ACCLAIM part of your lawn care service today, and keep your customers satisfied.

ACCLAIM®. Because your turf is always on display.

Special Bonus Savings:

Buy 3 gallons of ACCLAIM before March 16, and get 1 gallon free.

next decade.

"I've talked to four other associations," notes Terry Peters, formerly of the Associated Landscape Contractors of America (ALCA). "Everybody sees labor force-related problems, and they've been exacerbated by the new immigration laws."

Peters says that ALCA will attack the lack of career-oriented landscape workers. The organization hopes to establish a national certification program which can be transferred between states. "It certifies demonstrable skills that can be used as a career base," Peters notes. "We're at the point of having a proposal ready,

Vegas. Almost six hours of educational sessions will be devoted to the subject, including part of a two-hour panel discussion, "Issues of the '90s," on Nov. 7.

The trained

ALCA, which cooperates with 18 colleges and universities, notes a significant decline in horticulturally-oriented students. The organization's annual field day—a two-day series of landscape-related tests given graduating seniors—is becoming what Peters calls "horrendous competition" for the services of able students.

According to Clarence Davids of

the junior and senior high school levels. They've recently received help from the Future Farmers of America (FFA).

"We have had insufficient emphasis in the turf/landscape area," says Dr. Alan R. McDaniel of Virginia Tech, FFA contest supervisor. A new contest, beginning in 1991, "represents an introduction to horticulture, landscaping and turf at the high school level.

"We must introduce more students to the personal and career rewards in landscape horticulture," McDaniel observes. "But we really need to 'turn on' these students (to horticultural careers) before they start college."

The untrained

Unskilled, untrained labor could be in even shorter supply than trained people. *Business Week* says that the number of 18- to 24-year-olds will fall nearly 10 percent by 1995 while jobs available will increase by more than 10 percent. Few occupations will be unaffected, it says. "In suburbs across the country, gas stations, fast-food outlets and retailers are already offering up to \$6.50 an hour for jobs that elsewhere pay the \$3.35 minimum wage."

Peter F. Drucker, a noted author of books on business management, has his own concerns:

"In all developed societies, the able, intelligent and ambitious members of the working class stay in school beyond the point at which they are eligible for manual work. Young manual workers of today start out with a feeling of failure, a conviction of being second-class citizens. They need responsibility to overcome their feelings of insuperiority.

"To make a living is no longer enough. Work also has to make a life (career)."

There is an additional factor, according to Jim Brooks, the PLCAA's executive vice-president.

"The people aren't coming from the farm any more," he observes. "One of the comments that I've heard is that, because (potential workers) are not coming from the farm, what they know about pesticides is what they've been reading. There could be some that choose not to even apply.

"I've heard of companies in the Northeast, where unemployment is at four percent, not getting any applicants after running newspaper ads."

Hands-on help

For individual green industry operations, the three keys are recruiting, selecting and retaining (see related article). Technology, too, will make a

and we could have it up and running in the next year or so."

The Professional Lawn Care Association of America (PLCAA), meanwhile, will deal with the predicted labor shortage in great detail at its annual convention Nov. 4-7 in Las

Clarence Davids & Sons, Blue Island, Ill., "Many universities estimate that a student has an average of seven job offers upon graduation."

So, more and more, the professional organizations are realizing that young people must be called upon at

Why does the competition shrink from a side-by-side comparison to the Cushman® Runabout?

Why? Because the Cushman® Runabout gives you more payload and more power to do more jobs for more years. And at \$5,220*, no other utility vehicle can match its blend of value and performance.

It's that simple.

The proven, Cushman 222 overhead valve engine provides greater displacement for more torque and horsepower in the critical RPM range required for turf applications. A beefier, boxed-channel frame of carbon steel accommodates heavier implements and a one-ton payload.

The heavy-duty Runabout is more maneuverable. More durable. And it's backed by the industry's finest network of dealer service.

PAYLOAD

When a light utility vehicle isn't enough, and a full-function Cushman® Turf-Truckster™ is more than you need, the Cushman Runabout stands head and shoulders above the rest. Contact your Cushman dealer for a convincing demonstration, or call toll-free 1-800-228-4444 for more information today.

SOLUTIONS TO THE WORKER SHORTAGE

Improving the American workforce during the next 15 years is critical to economic growth.

In fact, to the extent that economic growth depends on an educated workforce, it is estimated that we must upgrade the skills of some 25 million American workers by 40 percent by the end of the century if we are to maintain a growth rate of even three percent.

As it is, there promises to be a shortage of skilled workers and high unemployment in many categories. White males will make up only 15 percent of the additions to the labor force between now and the year 2000. The rest will be women, minorities and immigrants.

The result could be a workforce desperately in need of education to meet the demands of higher skilled jobs and a significant population of inadequately educated employees for even entry level jobs.

A system

U.S. Lawns Inc. franchises landscape maintenance companies. When the company began three years ago, the greatest concern of our franchisees was in estimating and sales help. We provided heavy support in this area. As they matured and grew, we provided help with bookkeeping, cash flow, customer service and technical problems. Now, however, the major concern for our franchisees (and the area in which we are trying to provide the greatest level of assistance) is people. How to find people, how to select the right people and how to train people efficiently are all major issues with our franchisees. We at U.S. Lawns try to solve these very different problems in three very different ways.

Recruiting

The first and most obvious problem is recruitment. Some companies import workers from areas where there is a surplus, like Texas. Workers can also be imported from South America or Mexico under temporary work permits.

Another source of help, especially in the summer, is the school system. Coaches and guidance counselors are very helpful in supplying names of interested students, particu-

larly those coaches who wish to keep their players in shape over the summer. Landscape maintenance is a wonderful way to keep athletes "fine-tuned" over a summer vacation.

Work study programs are also appropriate, especially when hours are flexible. Our largest franchise is experimenting with working at night on commercial properties with high-powered lights. It is cooler; some individuals like to work

Dr. Cabot L. Jaffee is the chief executive officer of Electronic Selection Systems of Orlando, Fla. He is also Chairman of the Board of U.S. Lawns Inc., a company that franchises landscape maintenance services. Dr. Jaffee, who has been on the faculties of the University of Tennessee and the University of Central Florida, is a member of the American Society for Training and Development.

the evening or night shift; and—with the exception of weeding—activities can be carried on with high-powered lights. This is opening up a new possible market for employees.

Many cities have youth programs which provide a source of potential employees.

For many people in drug rehabilitation and offender programs, work is a wonderful opportunity to deal with their problems in a positive way and develop job skills.

Boys' and girls' clubs also provide a source of good potential workers who are interested in learning workable skills.

Perhaps the most exciting and innovative approach so far

has been our "High Potential Franchise Program" in which talented high school, college or vocational school graduates are assigned to work for an existing franchise for two years. Money is withheld from their salaries and placed in an account for them. U.S. Lawns matches the amount withheld; at the end of the two years, they purchase a franchise themselves. (If they withdraw from the program before the two years is up, their money is returned with interest.)

Obviously, there are many other ways to source a good workforce for the industry. Speaking at schools, participating in career days, getting involved in community activities—all open up potential sources of workers.

Selecting

After you find workers, the next step is selecting the ones who are likely to be successful. This is especially important at the foreman or supervisor level as these people significantly influence the turnover rate. U.S. Lawns applies this same philosophy when selecting franchisees.

A good selection test to determine people most likely to be good supervisors will go a long way in decreasing turnover. We recommend to our franchisees that they check references, interview applicants carefully and use tests we supply them to help select good supervisors.

Retaining

Once you select a potentially good person, offer ongoing support to help him or her do the job better. What we recommend is ongoing supervisory training in how to coach and counsel employees, how to discipline employees and how to make sure employees' problems are dealt with fairly and quickly.

When we are competing with fast food companies, service companies and so many others, the importance of reducing turnover is great. We try to create a feeling among our workers that they can move up in the organization and become supervisors themselves.

If at all possible, profit-shar-

Spray herbicide directly over the top of your established shrubs and ornamentals? Go ahead. Surflan® lets you spray with complete confidence.

All you'll see are the bright colors of your landscape or lawn. No crabgrass. No oxalis. No chickweed. And no prostrate knotweed and 50 other grasses and weeds, either. You won't see them for six to eight months, in fact, when you spray Surflan preemergence herbicide.

You'll also see Surflan is more stable on soil surfaces. It'll wait three weeks for water. Then it stays put,

even in heavy rainfall, to provide outstanding weed control. Yet it's gentle enough to spray over the top of 175 different ornamentals.

So go ahead. Fill up with Surflan and take your weed control where you never thought possible. Over the top of your ornamentals without injury. See your Elanco distributor. Or call toll-free: **1-800-352-6776**.

MANPOWER from page 24

ing or other types of incentive plans help retain workers. These plans make them feel as if they are contributing to the overall success of the company and are being rewarded for it. The keys to retaining employees are good supervisors—and good supervisors come from selecting people with good skills and training them as much as possible.

A lesson of the '80s that will only grow in importance is that

People, rather than machines or capital, are the critical factors in the service economy.

people rather than machines or capital are the critical factors in fueling this needed growth in the service economy. It is also clear that education relates very strongly to individual opportunity. People who receive job training earn 25 percent more than individuals who do not.

This is the message we must give to our employees. We will help teach them valuable skills, we will offer them career opportunities and perhaps, most importantly, we will treat them in a way which makes them feel rewarded by what they do.

So, what appeared to be a simple and straight-forward problem is really not. It's not just a problem of finding people. It's a problem of selecting and developing good supervisors in order to cut down on turnover and therefore create less need to find new people. It's also a problem of what each organization must do to create feelings of career opportunities among all employees—which will also cut down on turnover.

No one part can totally solve the problem.

There will be shortages of employees. Innovative approaches will be necessary. But the successful organizations will be the ones that do the best job of keeping their people.

—Cabot L. Jaffee, Ph.D. □

OPEN HEAVENS CAN'T CLOSE OPEN COURSE

Superintendent Joe Hahn faced the challenge of his life when rain pelted his course for 12 days before the U.S. Open championship.

by Ann Reilly

Players took to the practice green after play was suspended Friday because of excess water.

The 1989 U.S. Open golf championship will not be remembered by Oak Hill Country Club superintendent Joe Hahn for Curtis Strange's second straight Open victory. It'll be remembered for the rain.

"That was the worst it's ever been for me," Hahn observes now. "The challenge was there, as I imagine it was for a lot of superintendents at major events last summer."

Nothing short of a miracle kept the Open on schedule through that Sunday afternoon. Before practice rounds started in Rochester, N.Y. that week, six inches of rain had already fallen during the first 12 days of June. Almost one-half inch of rain fell that Tuesday morning, and the skies burst open again on Wednesday morning.

By then, the decision had already been made not to allow automobile parking on the West Course in fear of

seriously damaging it, leaving 6,500 drivers scrambling to find alternative places to park. On Wednesday afternoon, a line of spectators had to wait for more than an hour to catch shuttle busses to nearby and not-so-nearby parking facilities.

On Friday, play was suspended for 45 minutes while the crew squeegeed the greens. Leaves that had fallen during the rain also had to be blown away (although the crew was not drying the greens with blow dryers as a television reporter suggested).

If things weren't already bad enough, so much rain fell on Friday night that a creek on the sixth hole overflowed. The sixth hole, the main entry road and parts of the fifth, seventh and eighth fairways were left under water.

USGA officials were ready to suspend play on Saturday and revert to their contingency plan: play 36 holes on Sunday. But Hahn convinced them that the course could be readied.

Local fire trucks were brought in to pump 1,000 gallons of water a minute off the course. Squeegees, which were a common sight all week, were manned by other local superintendents to remove water. After being given two more hours by the USGA to cut the greens, the crew had the course ready. Play started at noon Saturday on both nines. Some of the fairways were completely cut; others were cut around wet spots.

"ABC-TV said the golfers thought the course was very playable," Hahn notes. "But I don't think a person would want to go through that every year. It's a lot of fun to meet the challenge, but if you had the adverse conditions and you had to do it every year, it'd get old quick."

There was no joy in Mudville for either players or spectators at Oak Hill Country Club this summer during the U.S. Open.

This Time, We Did Competition, We Out

To make a dramatic turnaround in your productivity, put yourself behind the wheel of the machine that outmaneuvered them all: The new Groundsmaster® 220-D or the new gas-powered 224 from Toro. No other out-front rotary mowers are as maneuverable, as effortless to operate or provide as much trim productivity.

Fourlink power steering is your link to unmatched maneuverability. Now operators can make sharper, easier turns with less fatigue. This makes trimming around any obstacle quick and almost effortless.

To give you even more cutting control, Groundsmasters feature a single knob deck-to-tractor weight transfer system. A twist of the wrist is all it takes to balance cutting unit flotation to height of cut and traction needs. The result is better traction and better flotation without scalping.

When it comes to engine size, Toro gives you the power of choice. The new Groundsmaster 220-D features a 20 hp liquid-cooled, 3-cylinder Mitsubishi diesel engine. The new Groundsmaster 224 gives you the same engine in a gas model, providing you with the durability diesels are known for, but with more power. Both give you all the speed and power needed for the most demanding jobs.

The Groundsmaster 220 also is available with a 20 hp air-cooled gas engine.

It Overpower The t maneuvered Them.

A small, compact wheelbase provides a small uncut trim circle and tight turn-around enabling you to trim close around any obstacle. Just what you need to get into or out of tight areas.

With all these performance features, it's obvious why the new Groundsmaster 220-D and 224 are so popular. And why Toro is the leader in out-front riding rotary mowers. To request a demonstration, call your local Toro distributor or contact Toro at the address below.

TORO

The Professionals
That Keep You Cutting

A patented, heavy-duty carrier frame with floating cutting decks allow the cutting units to follow ground contours for a superb quality of cut. For added cutting control, there are three decks to choose from: 72", 62" or 52". And the 52" is available with an optional grass collection system.

THE CLEAN-UP JOB: A MONTH-LONG PROJECT

After the U.S. Open finished and a light drizzle fell during the awards ceremony, Oak Hills superintendent Joe Hahn was faced with the challenge of putting the course back in shape—no small task.

The stakes and ropes were taken down within the first two days. Outside contractors had the tents down after a few days, and in two to three weeks the bleachers disappeared. The ropes, screening cloth and the wood used in the scoreboards will be sold to the Medinah Country Club, site of the 1990 Open, in the same manner they were acquired from The Country Club in Brookline, Mass., where the Open was held last year.

Member play was scheduled to resume the day after the Open—it was a day of sunshine so desired the week

before. Guests returned on June 27.

After the Open, the playing areas of the course were not the parts that needed the most attention. What did were the muddy grassless areas, the result of the thousands who had fought the elements for a glimpse of Strange, Kite, Beck, Woosnam and McCumber.

Hundreds of yards of wood chips had to be removed, along with many sheets of plywood that had been placed around the course to make the steep hills maneuverable and to protect the ground. The bare areas were aerified and overseeded; it took several weeks of cooperative weather for the areas under irrigation to get back in shape.

—Ann Reilly □

US OPEN from page 28

On May 1 of this year, an outside contractor began putting up grandstands and tents. Hahn held his breath as the last bleacher was finished on Monday, the day before the first practice round. ABC started building its television towers on May 17.

An early start

Membership priorities were certainly infringed upon during the get-ready stages, but members actually missed only one day of play before the Open.

The maintenance crew, which totals 32 for the two courses at Oak Hill in normal years, was increased to 40 this year. An additional five-man swamper crew was hired to put up and take down ropes and stakes and to build scoreboards.

Eleven of Hahn's employees have or are working toward advanced degrees in turfgrass management. Rusty Madden is the assistant supervising the East Course, and assistant Joe Frank heads up the West Course.

Crunch time

A month before the Open, some members of the crew voluntarily began working 80-hour weeks. ("We let them decide," Hahn notes. "It wasn't mandatory.") Their days started at 6 or 7 a.m., 4:30 a.m. during the Open. Because of the weather problems during the Open, work often wasn't done until 10 p.m. The crew's available time to work was naturally limited, because once the crowds arrived and play started, there wasn't much they could do.

USGA tour agronomist Tim Morgan began visiting Oak Hill monthly during the summer of 1988. This year, he arrived on May 26 and,

Joe Hahn says bad conditions would make superintendent-ing "old quick."

working with Hahn, had a daily goal of insuring that the course was firm and fast.

Their game plan was to take Stimp-meter readings each morning after the greens were double-mowed and groomed, and from that determine what activities would take place in the afternoon: double-rolling for firmness or grooming for speed. Naturally, the schedule changed.

The plan was to cut fairways, approaches and tees every morning to $\frac{5}{16}$ -inch, cut the greens every morning to $\frac{7}{64}$ -inch and cut the intermediate rough every afternoon to two inches. Because of water on the course, the fairways were cut in the afternoon rather than in the morning. Fairways and greens were rolled more often than originally planned. The primary rough was cut on Monday before the practice rounds to a height of four inches and was not re-cut during the Open.

Players in the 1985 Senior Open

had expressed concern over the severity of the slope leading to a pond on the 15th green. Therefore, a retaining wall was built and the area leveled to make an unfair situation manageable. An improved tee was built on the fifth hole to lengthen the hole. The seventh tee was enlarged and the sixth tee leveled. The bunkers on No.5 were reconstructed: one was eliminated and the remaining two were converted to splash bunkers. Throughout the course, all of the bunker edges were restored.

Making it MEM

For the past three years, fairways were aerated five or six times each year, and lime was applied to reduce thatch. Two years ago, the crew began triplex mowing the fairways. Perennial ryegrass was introduced to the roughs, which were primarily bentgrass and *Poa annua* (a result of previously narrowed fairways). One objective over the past two years was to make the course firmer than for normal membership play.

Hahn, father of seven and a new grandfather, is in his seventh year as superintendent at Oak Hill. In all, he has 34 years of experience in golf course management. Surprisingly, he remained very calm and cool during the unexpected turn of events.

"You do everything you can," he explains. "I feel bad for my crew, which worked so hard to prepare the course and then had the weather turn that way." **LM**

- **Caliente** Perennial Ryegrass was originally selected because of its superior performance under heat and drought conditions. During repeated heat and drought stress trials, it outperforms competing varieties.
- **Caliente** exhibits "tuff turf" characteristics, showing resistance to common turf diseases and excelling in wear stress tolerance tests.
- **Caliente** ranks high in trials for fine leaf texture and good mowability. It is excellent for overseeding dormant turf and establishing permanent lawns. Perfect for use on golf courses, parks, playgrounds, home lawns, and general turf areas. It's the homeowners choice as well as the professional turf managers.

Circle No. 139 on Reader Inquiry Card

THE HARVEST IS IN (...and pert' near gone!)

Seed producers' hopes for a harvest of plenty were altered by weather, lower production and strong demand.

by Terry McIver, associate editor

A Boy Scout would have a field day as a grass seed grower or marketer. He'd always have to "be prepared."

Heavy demand and fickle weather conditions contributed to a less-than-anticipated 1989 harvest for many seed varieties, most notably tall fescues.

Last year it was the drought. This year rain was plentiful, but at the wrong times.

"All the fescues are low," says **Doug Toews** of International Seeds. "The weather did it. We had the cold spell in December, then little rain, then lots of rain, and some more rain at harvest time. It was six of one, half-a-dozen of another."

'The demand for tall fescue is as hot as ever! Industry-wide, it's been... spotty, production, increased demand and weather.'

—Joe Churchill
Northrup King

Also, field burning was interrupted for several days in 1988 after the I-5 accident, and some think the interruption ultimately caught up with production.

Tall fescues hardest hit

Turf-type tall fescues took a real beating this time around.

"We think it was a number of weather-related factors," says **Mike Robinson**, president of Seed Research of Oregon. "There was late rain in November, a late green-up, and then the cold weather in February. And after the cold spell, wet weather held up fertilizing in February."

Though fertilizing schedules might differ slightly among growers,

Dormant feed with Milorganite this fall,

#1 Fairway
Milwaukee Country Club
Milwaukee, Wisconsin
Dormant fed Milorganite - Photographed March 25th

And see results like this next spring

Here's the same fairway
30 days later. Photo taken
April 25th showing early
green-up effect of dormant fed Milorganite.

Why Dormant Feed Milorganite?

Reduce Operating Costs

You'll save time and money. Apply Milorganite in late fall for efficient labor and nutrient use. More time is available for you and your staff in late fall, and spring time crunches will be avoided when you dormant feed Milorganite.

The W.I.N. Factor

Dormant applied Milorganite does not burn, leach, or lose its nutritive value due to a 90% Water Insoluble Nitrogen (W.I.N.) factor.

Rich In Chelated Iron

Your turf will look great. Milorganite provides 4% min. iron and a full package of nutrients. That means an early

spring green-up without excessive growth, with the iron content carrying the rich color well into the heat of summer.

Robinson says those who were able to fertilize well in February had the best yields.

"We expect the 1989 tall fescue crop to fall short of the demand, a demand that is constantly increasing as users realize the advantage of turf-types over the older, forage-type tall fescues," says **Art Wick**, director of research and development for Lesco. Wick says grower costs have increased more than costs for the 1988 crop, which should reflect in somewhat higher professional user prices this fall. According to Wick, future turf-type tall fescue demand is difficult to measure, but Lesco expects to see a growing demand for several years.

The demand for tall fescues has been "as hot as ever," says **Joe Churchill** of Northrup King. "Some (of our) varieties in some areas have had winter damage in February. Galway was effected, but Arid is okay. Industry-wide, it's been a combination of spotty production, increased demand and weather."

"Our tall fescue supplies are adequate, but adequate isn't good enough," remarks **Gary Parker**, general manager of Lofts. Our older stands were primarily weak. It's weather related, fertilizer related... we don't have the answer."

On the plus side, Parker says new fields planted a year ago should help ease any pending shortages next year.

Gayle Ward of Jacklin Seed Co. finds the tall fescues very disappointing, with a 50 percent yield reduction. And **Tom Stanley** of Turf Seed sees many tall fescue yields as 30 to 50 percent short. The especially cold winter was something Stanley and others think may have been another negative factor.

Add to that a heavy demand. "There are more certified production acres of tall fescue than perennial ryegrass in Oregon," says **Steve Tubbs**, vice president and general manager of Turf Merchants, Inc. However, demand for tall fescue is keeping supplies tight. "All tall fescues are yielding poorly due to reproductive tillers turning vegetative rather than producing seed heads," continues Tubbs, "and clean-outs are higher than expected due to empty florets.

"Regardless of demand, there is a virtual sell-out of all varieties at prices comparable to last year. In fact, it's the first time in history that the turf types have raised the price of Kentucky-31 as opposed to Kentucky-31 pulling the price of turf types down," says Tubbs.

Due to excellent demand for pe-

BENTGRASS

"We planted the 12th hole on Singing Hills' Willow Glen Course to SR 1020 two years ago, and it performed admirably. What's really significant is that members keep asking what we've done to the 12th hole that makes it putt so well! The members like SR 1020's performance from the players' point of view; we like that too, but we also value that we

haven't had to change our normal greens maintenance program to achieve the results."

David Fleming

David Fleming, C.G.C.S.
Superintendent, Singing Hills Country Club
El Cajon, CA

"The newer golf course greens planted to Penn-cross look beautiful, but they don't putt like the old South German Bent greens. The putting surface of those old greens is fine-textured, not thatchy or grainy, and the old greens don't show the spike marks like Penn-cross. We've been needing bent-grasses bred for golf quality as well as turf quality for a

long time, and it looks like SR 1020 and Providence fill the bill!"

Pete Trenham

Peter Trenham
President, Philadelphia Section PGA
St. David's Golf Club
Wayne, PA

Finally! New Cultivars Bred To Meet the Needs of the Superintendent and the Golfer!

At Seed Research, we listen to your needs. You've been wanting a bentgrass that's tough, looks great, and is easy to maintain...but one that's also fine-textured, with good putting green quality. And available.

So when the bentgrass shortage became apparent in 1983, we acted quickly and acquired parental germplasm from two of the finest bentgrass collections in the country — the University of Rhode Island and the University of Arizona. From those collections we developed two exciting new creeping bentgrass cultivars, Providence (SR 1019) and SR 1020.

Evaluation on golf courses and at universities has shown that both these bents produce the kind of turf you demand: dark green, aggressive, competitive, easy to manage, good disease resistance, good stress tolerance, and compatible with existing bents for overseeding.

And for real golfers like Peter Trenham, SR 1020 has proven it provides everything desired in a putting green bent: fine texture, uniform surface, and most importantly, an absence of grain, so the ball holds the line for true putting accuracy.

With Providence (SR 1019) and SR 1020, you can look forward to a good looking grass that will give you the performance you demand and the putting green quality your golfers prefer:

Both varieties are in production and excellent quantities of certified seed are available NOW.

ennial ryegrass, supplies this year of Pennant, Belle and Competitor will be limited, says **Shari Burlingham** of E.F. Burlingham & Sons. "Competitor, our new variety, will be included in our mixtures this year. We'll custom blend it to meet individual needs and requirements."

Tubbs said most of TMI's proprietary perennial ryegrasses will be in adequate supply, although the crop isn't nearly as good as 1988's—increased acreage should offset decreased yields.

This harvest yielded the first crop of Bonsai dwarf fescue, a specie that has been sparking interest throughout the industry. According to Tubbs, recent excavation of a 10-month-old Bonsai sod plot in southern California proved conclusively that Bonsai's roots extended a full six feet below the surface. "So there is no truth to the speculation that the dwarfs have shallow root systems," says Tubbs, who

believes Bonsai and similar varieties will take over the turf market west of the Mississippi due to their attractiveness as turf with drastically reduced maintenance requirements.

Bring on the blues

"The yields for proprietary bluegrasses were nothing to write home about," says Tubbs. "Most are based on the price of common bluegrasses, which is cheaper than it has been for several years and awfully strong. Fall demand will be required to keep the proprietaries from slipping. There will be some shortage of older, lower yielding varieties, but more than ample supplies overall."

Fine Lawn Research's **Bill Junk** says the Chateau Kentucky bluegrass crop will be adequate. Midnight fans will be glad to hear from Turf Seed's Stanley that recent acreage increases for Midnight should result in adequate supplies by crop year 1990.

Harry Butler, Jacklin's vice president of marketing, says there will be selected shortages on some of the lower seed-yielding varieties of proprietary Kentucky bluegrass. "There is a slight increase in acres over last year," says Butler, "however, we still do not have sufficient producing acres to meet demand. New acres have become difficult to place due to other competing commodities, such as wheat, corn and other grain products."

Says Northrup King's Churchill: "Our bluegrass yields are coming in very well at press time. We anticipate a good supply of most varieties throughout the year."

Churchill also reports adequate supplies of the "Penn Pals" bentgrasses.

Sources say most of the proprietary fine fescues grown in Oregon are disappointing contractors with both yields and clean-outs, and there is a great disparity between the common

Canadian red fescue crop and the Oregon fine fescue crop. Chewings and hard fescues could be in short supply, especially if strong demand for certified varieties from Europe

continues.

"Many factors limit successful increase in production acres," says **John Zajac** of Zajac Performance Seeds.

"Demand in most segments remains good. Therefore, I expect the higher quality, better marketed varieties to remain in a 'no surplus' condition for some time." **LM**

Canadians still enjoy '88 crop

Though the United States is a net exporter of turfseed, some of what New Zealand and Canada exports may find its way here.

From New Zealand comes perennial ryegrasses Nui and Ruanui, which are harvested in January. Usually pegged for forage use, they may have lawn applications.

Estimates are that New Zealand will import as much as 20 million pounds of seed this year, according to Dave Nelson, director of the Oregon Fine Fescue Commission.

Rain has kept Canada's harvest of fescue and forage seed down significantly from last year, according to Al Dooley, a special commodity analyst with Alberta Agriculture. Canada exports about 20 million pounds of fescue annually, some of which finds its way into bluegrass mixtures.

"The United States is our most important market by a long shot," says Dooley. "You guys take 70 to 90 percent of our export."

Canada's principal turfgrass is the creeping red fescue Boreal, used primarily as a filler in Kentucky bluegrass mixtures.

"We feel it's a good variety because of its shade tolerance, hardiness, and the fact that it's a creeper that fills in bare spots well," says Marvin Nakonetchny, secretary master of Canada's Forage Seed Council. The exportability of Boreal depends on U.S. demand, says Nakonetchny, and the current market price of 25 cents/lb. is likely to send most of it into storage.

"The fact that it's sold as a no-name variety in the U.S. is a problem we should address," he adds.

Canadian seed comes from the prairie provinces: the Peace River region of Alberta, Saskatchewan and Manitoba. Last year Canada enjoyed an exceptional crop, says Dooley. That resulted in the export of approximately 18.5 million pounds of fescue, 13.6 million pounds of red clover, 8.0 million pounds of sweet clover, 5.25 pounds of alsike clover and 1.5 million pounds of brome grass clover.

Because of the region's climate, storing the seed for several years is not a problem. As a result, last year's bumper crop is still on hand should America's bluegrass market take off this fall.

A very limited amount of Canada's acreage does consist of bluegrasses. Canadians are also looking at turf-type fescues and ryegrasses, "... but so far it's insignificant," adds Nakonetchny.

Tomorrow is Today at TMI

Years of trials and research are necessary to develop new turf and forage varieties which keep pace with the ever-changing needs of the consuming public.

That is why TMI is developing Today varieties that will carry us into the 1990's. As varieties like **Pennfine**, **Manhattan II**, **Barry** Perennial Ryegrasses, **Rugby** and **Gnome** Kentucky Bluegrass have shown, there is always a home for high quality, top-performing varieties. From international sources and from some of the nation's finest universities, TMI is constantly searching for improvements to our proprietary program with varieties like **Aquarius**, **Wrangler** and **Bonsai**. These new varieties will prove beneficial to all, long into the next century.

SEED COUNTRY INSIGHTS

● Lofts' new Rebel Jr. turf-type tall fescue is doing okay its first time out, says **Gary Parker**. It yielded well, and the company is excited about Jr.'s prospects. Lofts is marketing five new varieties: the fescues include Rebel Jr., Bar-None and Tribute; bluegrasses 1757 and Suffolk, a joint venture with Jacklin Seed Co. Lofts' research director, **Richard Hurley**, thinks there's "real trouble ahead" for bluegrasses in the Northwest because "the turf-type tall fescue varieties are so good and they're going to be moving north . . ."

● Jacklin is moving ahead with its development of a turf-type redtop grass plant. **Dr. Doug Brede** has poly-crossed and harvested several types of the redtop. "We will plant out the progeny from this cross in 1989 to further refine a potential variety," says Brede. Redtop is a low maintenance variety that does well in adverse soil conditions . . .

● Demand for Longfellow chewings fescue grows each year, says **Doug Toews** of International Seeds . . .

● Northrup King is releasing a new Kentucky bluegrass variety, called Kelly. Good heat and drought tolerance, according to Northrup's **Joe Churchill** . . .

● Churchill also reports that Northrup will get an exclusive in 1990 on Pure Seed Testing's newest tall fescue, 5DM. To be renamed later . . .

● Maverick II is now available. Pickseed West calls it an improved turf-type tall fescue that is slower growing than the original Maverick, and has performed well in national tests . . .

● Charger is a new perennial ryegrass from Turf Seed, Inc. **Tom Stanley** reports it demonstrates dark green color, high density, lower growth habit and very good disease resistance . . .

● Mondial is an advanced synthetic turf-type perennial ryegrass cultivar developed by Mommersteeg. Van Der Have Oregon has it in adequate supply, and reports quick establishment as a benefit . . .

● Avanti is a new semi-dwarf turf-type tall fescue from Warren's Turf Nursery. High shade tolerance and low growth habit are two benefits. Limited in 1989; full production expected in 1990 . . .

● From Hubbard Seed & Supply: Hubbard 87 is a new dwarf turf-type tall fescue variety developed with **Dr. C. Reed Funk** of Rutgers University. Production will be controlled by Hubbard to meet the sod quality market needs; limited through 1991 crop year. Sod-Gem Turf-Type featuring Hubbard 87 also is limited through 1991 . . .

Ryan brings quality aeration from golf greens to green lawns.

Introducing the new Ryan Lawnaire® 28.

The revolutionary Lawnaire 28 combines the technology and precision of golf course aeration with the demands of lawn maintenance. Its reciprocating, crank mounted tine arms feature a vertical coring action similar to larger Ryan aerators. Tines penetrate straight in to a depth of 2½ inches, and come straight out. The results are a more professional-looking job, better root development, greener lawns, and more satisfied customers.

Make more money by the yard.

Because time is money, the Lawnaire 28 is designed to cover big jobs quickly — up to 24,000 sq. ft. per hour. But because not every job is big, it's also compact and maneuverable. Just 34 inches wide, the Lawnaire 28 easily fits through yard gates. The unique tricycle front wheel gives the unit a zero turning radius while aerating!

Even the tightest spots are no problem. And because it's a Ryan, you can rest assured that the Lawnaire 28 will keep you on the job and out of the repair shop for years to come.

Check out Ryan's reliability in your own backyard. Contact your Ryan dealer and ask for a free demonstration today. Or call toll free: **1-800-228-4444**.

Olathe Chippers

for the tree care professional

■ Olathe Chippers reduce bulk — cuts down time to landfill sites. Provides mulch for safety and beautification programs. Olathe manufactures five models to handle your chores — from 8 hp 2½" capacity to 175 hp 12" diam. capacity. With units in the field for over 15 years, Olathe keeps proving itself as a leader in the chipper field.

Model 864 — Gets volume reduction of pallets and wood debris for increased disposal capacities

Model 12 — PTO, 3 pt. hitch or tow-type, 7" capacity, 500 lb. drum

Model 182 — Brush chipper reduces limbs and brush up to 6" in diameter quietly and efficiently.

Model 986 — Hydraulic feed disc chipper features: 12" capacity, variable feed rate, gas or diesel, and 15° curbside feed angle for safety.

PRODUCTS

Grasscatcher sweeps all debris up and away

The Grasshopper Company has a new grasscatching system for its zero-turn-radius mowers. The Quik-D-Tatch has been designed to deliver powerful vacuuming action, even in adverse conditions. Wet grass, pine straw and dethatching debris are all easy prey of the Quik-D-Tatch.

The unit operates directly from the mower deck drive, and can be re-

moved or installed without tools in seconds, by simply pulling one pin. An optional air/full signal indicator automatically sounds an intermittent signal when the hopper is full or when airflow through the rear screen is restricted.

Grasshopper grasscatchers are available in two styles, the 8 cubic foot Model 7 slide-in bag catcher and the 13 cubic foot Model 15 lever-actuated metal hopper.

The 8 cubic foot bag catcher is

available as either a single or twin bag, and one person can easily dump clippings directly into a pickup bed or container.

Plastic filters designed to minimize pressure loss

Pepco Water Conservation Products now makes 3/4- and 1-inch 12 GPM "Y" plastic filters, specifically suited for Drip Emitters, Laser Soaker Line, Laser Drip Tube and Micro-Jet models.

The filters are designed to minimize pressure loss, with internal flow direction along the longitudinal axis of the cylinder. This direct flow principle causes the filtered particles to

collect at the end of the cylinder where they can easily be flushed out through a 3/4-flushing ball valve. The filters are designed to work with water pressure to 100 PSI.

The filter achieves a high degree of filtration through the use of a polyester weave screen in a molded cylinder. O-rings insure perfect sealing, and the filter can be dismantled with a hand turn of the cylinder housing. Pepco has a complete line of water conservation products.

Now it's easier to make your greens come true.

We improved the only true Greens Conditioner.

No one else offers the patented features of the Jacobsen Turf Groomer™ greens conditioner. And now, we improved on the best. We did it by making the Turf Groomer easier to use and more durable. And that makes a big difference when you've got a lot of ground to cover.

The improvements begin up front. The exclusive front roller has a larger diameter for reduced rolling resistance, higher side frame clearance and improved durability. It works even better to "pucker up" horizontal runners and plant leaves, readying them for clipping. And now Jacobsen offers two blade spacings: the standard .280" for most green applications, and an optional .500" which works well where nearby traps have coarse grain sand.

The Turf Groomer's larger, thicker, six point knife blades are even stronger for longer life.

They rotate *through* the slots in the front roller, cutting horizontal runners and cultivating strong, erect grass plants.

A quick up/down blade adjuster has four positions in $\frac{1}{8}$ " increments so you can condition each green exactly the way you want. Or, you can raise the blades to skip grooming. And a Micro Depth Adjustment dial lets you fine tune cutting heights by increments of .007" without tools.

Every Turf Groomer greens conditioner comes with a sealed aluminum drive housing to prevent grass, debris and moisture build-up in the heavy-duty 1" belt drive system.

For faster, truer putting and healthier, hardier greens, look to the new Jacobsen Turf Groomer. For a free demonstration, contact your Jacobsen distributor.

Or contact Jacobsen Division of Textron Inc., Racine, WI 53403. Now it's easier to make your greens come true.

PROFESSIONAL LAWN CARE ASSOCIATION OF AMERICA SPECIAL 10TH ANNIVERSARY CONFERENCE & SHOW NOVEMBER 6-9, 1989

NEW DIRECTIONS! NEW OPPORTUNITIES! WHAT TO EXPECT IN THE 90s

Don't let the future be a gamble! Plan for your company's growth into the next decade by being part of THE EVENT of the lawn care season: the 10th Anniversary Conference and Show of the Professional Lawn Care Association of America. Bet on a sure winner — PLCAA/Las Vegas '89! — four unforgettable days in the entertainment capital of the world. Non-stop excitement, education, celebration and jubilation await you November 6-9!

YES! I'M INTERESTED IN PLCAA/LAS VEGAS '89!

SEND ME MORE INFORMATION ON:

REGISTRATION EXHIBITING MEMBERSHIP IN PLCAA

NAME _____

TITLE _____

COMPANY _____

ADDRESS _____

CITY _____ STATE _____ ZIP _____

TELEPHONE _____

CLIP AND MAIL TO:
Professional Lawn Care Association of America, Suite C135
1000 Johnson Ferry Rd NE, Marietta, GA 30068-2112

• **CELEBRATE!** PLCAA's Conference and Show is always the lawn care industry's event of the year, but PLCAA/Las Vegas '89 will be something special — the official 10th Anniversary celebration of the founding of the Professional Lawn Care Association of America. You won't want to miss the exciting 4-day round of special events planned to mark this milestone in lawn care history.

• **EDUCATE!** Three tracks of education will help you "Plan Your Business" into the '90's, with discussions of employment, water, finances, government regulations, and pesticide safety. Ample opportunities will allow for informal information exchange among colleagues.

• **EVALUATE!** The latest in lawn care products and technology await your inspection. Over 160 manufacturers, suppliers and distributors will be on hand, eager to answer your questions and demonstrate the tools you need to keep a competitive edge.

Each morning of the Conference and Show we will present a New Product Expo. Learn what will be state-of-the-art in the 1990s and how your business can profit from new technology and new chemistry.

• **PARTICIPATE!** This 10 year celebration of lawn care comes around only once, so don't miss it! Don't wait to hear about it from your friends, be there to experience for yourself what all the excitement is about. Experience Las Vegas, spectacular showplace of America where the Stars come out to play every night.

Watch your mail in early summer for registration information, or call PLCAA for information 1-800-458-3466, and mark your calendar for a trip to Las Vegas!

Your Business Partner

...Helping grow your business

As a busy lawn care professional, you can't be personally involved with the many critical details that go into making your business successful, details ranging from developing staff safety training programs to keeping abreast of the latest regulatory issues. That's why it is vital that you have the timely information that allows you to be proactive rather than reactive. That's why you need your Business Partner — The Professional Lawn Care Association of America. Let your Business Partner go to work for you on such assignments as:

- Issues Management
- Training programs for pesticide management
- OSHA Hazard Compliance
- An effective telemarketing program
- Preparing a marketing plan
- Update on small business law
- Group Health/Life/Major Medical
- A Credit Collection Service
- A Liability Insurance Program
- A newsletter on lawn care issues
- A public relations program
- Gather major suppliers of lawn care products and services

As the only international trade association of lawn care professionals, PLCAA has a strong history of providing the right information at the right time for the lawn care industry. Our staff and Board of Directors are dedicated to providing you with the professional business assistance you need to stay strong and informed.

To learn more about how to put your Business Partner to work — for less than a dollar per account per year, contact the Professional Lawn Care Association of America today. Clip and mail the return coupon, or call toll free 1-800-458-3466.

Grounds Managers

This Is What PGMS Is Doing For You

If you haven't checked out the Professional Grounds Management Society recently, then you're in for a surprise. We're offering a bundle of new benefits that make joining PGMS more rewarding than ever! Here's what we've been up to and how you can benefit:

ANNUAL CONFERENCE AND TRADE SHOW - The yearly forum bringing together grounds managers, top speakers, and suppliers for the sharing of knowledge and ideas.

NEWSLETTERS - A newsletter is mailed monthly to keep members current on the affairs of the Society and the latest developments critical to successful grounds management.

CERTIFICATION - Voluntary peer review of acceptable competence to enable you to become a Certified Grounds Manager.

RESEARCH AND SURVEYS - Information on operational practices is gathered for dissemination of all members.

INSURANCE - Included in your membership fee of \$5,000.00 accident and dismemberment insurance.

AWARDS - Members are recognized for outstanding achievement in grounds management. Annual Grounds Maintenance Awards Contest.

GROUND MAINTENANCE ESTIMATING GUIDE

GROUND MAINTENANCE MANAGEMENT GUIDELINES

GROUND MANAGEMENT FORMS & JOB DESCRIPTIONS GUIDE

WORKSHOP TRAINING - Management skills covering all aspects of grounds management. Available to all sections of the country.

DISCOUNTS - Members receive discounts on Hertz, Avis and Alamo Rental Cars as well as discounts on a complete line of horticultural publications.

No matter how large or small your operation, PGMS is your source for the best, most meaningful grounds management information and help. Your membership investment goes to work for you immediately — that's the PGMS promise. Join now and grow with us!

BOOKSTORE

010 - ADVANCES IN TURFGRASS PATHOLOGY

by Joyner and Larsen
Leading U.S. turf pathologists report on turfgrass diseases, pythium blight, snow molds, fairy rings, leaf spot of Kentucky bluegrass in Minnesota, initial and field fungicide screening, turfgrass disease resistance, etc. Contains new ideas on how to combat turfgrass problems. \$27.95

235 - LAWN CARE: A HANDBOOK FOR PROFESSIONALS

by H. Decker, J. Decker
Written by turfgrass professionals, this handy guide will be invaluable for playing field managers, golf course managers, or any lawn care practitioner. Covers all aspects of turfgrass management. \$36.00

645 - MANAGEMENT OF TURFGRASS DISEASES

by J.M. Vargas
Identifies turfgrass diseases by description and illustration. Includes a holistic approach to healthy turf and lawns. Presents practical management strategies for golf courses, lawns and athletic fields. 204 pages, illustrated. \$26.70

620 - TURF MANAGEMENT HANDBOOK

by Howard Sprague
Practical guide to turf care under both healthy and poor turf conditions. Chapters cover turf in cooler and warmer regions, fertilizer use, regular turf care, weed and disease control and special turf problems. Useful seasonal schedules for management of turf areas. \$25.25

220 - CONTROLLING TURFGRASS PESTS

by Shurtleff, Feranian, Randell
New comprehensive guide provides the most up-to-date information available on the identification, biology, control and management of every type of turfgrass pest. \$36.00

640 - TURF IRRIGATION MANUAL

by James Watkins
A guidebook for engineers, architects, designers and contractors. Keeps pace with the latest developments in turf and landscape irrigation. Specific chapters devoted to rotary sprinkler design systems. Golf course design systems and expanded engineering and reference material. \$27.25

630 - TURFGRASS: SCIENCE AND CULTURE

by James Beard
Comprehensive basic text and reference source used in many leading university turf programs. Includes findings of current research compiled from more than 12,000 sources. \$42.00

110 - TURF MANAGERS' HANDBOOK-Second Edition

by Daniel and Freeberg
ENTIRELY UPDATED. A practical guide for the turf practitioner. Chapters on grasses, growth regulators and diseases have had extensive modification. Innovations resulting from research and practice have been added to reflect the current techniques available for turf managers. \$32.95

230 - LAWNS-Third Edition

by Dr. Jonas Vengris and Dr. William A. Torello
Designed as a textbook or a practical usage manual, this book has been completely brought up-to-date. Care of lawns and turfgrass, from selection of varieties to maintenance of established grass is completely covered. \$25.95

225 - TURFGRASS MANAGEMENT

by A.J. Turgeon
Revised edition. Covers the latest developments in turfgrass science and technology. Heavily illustrated with dozens of new drawings. Provides specific recommendations for applying the newest pesticides, fertilizers and other materials to combat turfgrass problems. A valuable reference for diagnosing problems and determining their causes. \$42.00

615 - TURF MANAGEMENT FOR GOLF COURSES

by James Beard
Written by an eminent turfgrass researcher, this USGA sponsored text is an ideal reference and "how to" guide. Details all phases of golf course design and construction, turf management, course administration, irrigation, equipment and disease and pest control. Fully illustrated. \$52.75

410 - DISEASES & PESTS OF ORNAMENTAL PLANTS

by Pascal Pirone
This standard reference discusses diagnosis and treatment of diseases and organisms affecting nearly 500 varieties of ornamental plants grown outdoors, under glass or in the home. Easy to understand explanations of when and how to use the most effective fungicides, insecticides and other control methods. \$37.95

800 - THE GOLF COURSE

by Cornish and Whitten
The first book ever to give the art of golf course design its due, and golf course architects the credit and recognition they deserve. 320 pages and 150 color and black and white photographs. Traces the history and evolution of the golf course, analyzes the great courses, shows how they were designed and constructed. \$35.00

510 - HORTUS THIRD

from Cornell University
A 1,300 page concise dictionary of plants cultivated in the United States and Canada. A reference which every horticulture professional should have. \$135.00

610 - LIABILITY AND LAW IN RECREATION, PARKS AND SPORTS

by Ronald A. Kaiser, J.D.
A fact-filled reference that all recreation professionals should have to steer clear of lawsuits resulting from athletic and recreation participant injuries. Uses layman's terms and an analysis of crucial court cases to provide you with a host of recommendations and risk management guidelines. \$33.00

125 - SCIENTIFIC GUIDE TO PEST CONTROL OPERATIONS

by G.W. Bennett, J.M. Owens, R.M. Corrigan
Fourth Edition. New chapters on fumigation, urban wildlife, special facilities, plus updated, improved chapters on pesticides, cockroaches, birds, termites, equipment, sanitation, stored product pests and more. Don't be without this updated edition. \$49.95 Domestic All Others \$60.00

345 - COST DATA FOR LANDSCAPE CONSTRUCTION 1989

Kathleen W. Kerr, Editor
An updated unit cost data reference for designers and cost estimators. Developed to fill the tremendous need for detailed landscape construction cost data. Laid out in easy-to-use CSI format. Annual. \$35.00

300 - LANDSCAPE DESIGN: A PRACTICAL APPROACH

by Leroy Hannebaum
Geared for the commercial designer/salesperson, this is a one-stop guide to the landscape design process. Covers the entire highly competitive field including design analysis techniques, pointers on land forms, specialized business landscaping methods, environmental design guidelines, specifications, estimations, bids. \$41.00

305 - LANDSCAPE MANAGEMENT

by James R. Feucht and Jack D. Butler
Planting and Maintenance of Trees, Shrubs, and Turfgrasses. Describes the basic principles of cultural management of installed landscapes. The important factors of plant growth, soils and fertilizers, improved planting techniques and new pruning techniques, integrated pest and disease management, and spray-equipment calibration and care are all featured. \$29.95

415 - INNOVATIVE APPROACHES TO PLANT DISEASE CONTROL

by Ilan Chet
Brings together alternative approaches and methods that have potential to control diseases caused by fungi, bacteria and viruses. Major concepts of disease control discussed include biological control systems, their possible mechanisms, potential application and genetic improvement. \$52.50

690 - INSECTS THAT FEED ON TREES AND SHRUBS

by Johnson and Lyon
Essential information for identifying more than 650 insect pests and the injuries they cause. More than 200 color illustrations. \$49.95

500 - THE 1989 PESTICIDE DIRECTORY

by Lori Thomson Harvey and W.T. Thomson
A Guide to Producers and Products, Regulators, Researchers and Associations in the United States. For the person who needs to know anything in the United States pesticide industry. \$75.00

BOOKSTORE

370 - LANDSCAPE OPERATIONS: MANAGEMENT, METHODS & MATERIALS

by Leroy Hannebaum
An in-depth examination that combines technical training in landscape science with methods of accounting, business management, marketing and sales. Discusses effective methods for performing lawn installations, landscape planting and maintenance. Step-by-step accounting calculations are explained in simple terms. **\$38.00**

365 - LANDSCAPE PLANTS IN DESIGN

by Edward C. Martin
An annotated photographic guide to the design qualities of ornamental plants and their aesthetic and functional use in landscape designing. Over 600 trees, shrubs, vines, ground covers and turfgrasses are described in nontechnical language. Over 1900 photographs. Provides a basis for selecting the best plant materials for any particular use in landscape design. Contains detailed indexes that provide quick reference to particular design qualities and growing conditions. **\$58.95**

375 - RESIDENTIAL LANDSCAPES

by Gregory M. Pierceall
An excellent reference for individuals involved in the design and development of plantings and constructed features for residential sites. Illustrations and actual residential case study examples are used to communicate graphic, planning and design concepts which are the focus of this text. **\$43.00**

665 - ARBORICULTURE: THE CARE OF TREES, SHRUBS AND VINES IN THE LANDSCAPE

by Richard W. Harris
Provides comprehensive coverage of complete planting, site analysis, preparation and special planting methods, fully detailed coverage of fertilization, irrigation and pruning guidelines on preventative maintenance, repair and chemical control, how-tos of diagnosing plant problems, practical data on non-infectious disorders, diseases, insects and related pests and pest management. **\$56.00**

400 - NATIVE TREES, SHRUBS, AND VINES FOR URBAN AND RURAL AMERICA

by Gary L. Hightshoe
This award-winning reference to native U.S. plants has now been expanded to include shrubs and vines. Over 250 major species are characterized by form, branching pattern, foliage, flower, fruits, habitat, soil, hardiness, susceptibility, urban tolerance and associate species. Includes unique color-coded keys that classify plant species by visual characteristics, cultural requirements and ecological relationships. **\$79.95**

720 - SHRUB IDENTIFICATION

by George Symonds
Pictorial key to identify shrubs. Contains more than 3,500 illustrations to check specimens. Popular and botanical names are given for each shrub and handy index tabs for quick reference. **\$12.95 paperback**

750 - TREE IDENTIFICATION

by George Symonds
Pictorial reference to identifying trees by checking leaves, buds, branches, fruit and bark. Like its sister publication, SHRUB IDENTIFICATION, popular and botanical names are listed with index tabs for easy reference. **\$14.95 paperback**

755 - TREE DETAILING

by Michael Littlewood
A compendium of practical information on all aspects of tree planting and maintenance. 10 chapters deal with tree stock and sizes, planting techniques, pruning and surgery, protection of new trees and existing trees, maintenance and management, survey and evaluation. **\$32.95**

760 - TREE MAINTENANCE

by Pascal Pirone
The fourth edition of this guide for anyone involved in the care and treatment of trees. Special sections on tree abnormalities, diagnosing tree troubles, non-parasitic injuries and assessing the suitability of different trees. **\$49.50**

405 - WOODY ORNAMENTALS

by Partyka, Joyner, Rimelspach, Carver
Illustrates plant identification characteristics. Organized in two basic sections: plant identification and plant disorders, this text utilizes 430 color photos, 430 line drawings and 45 black and white photos to simplify identification. **\$32.50**

PROBLEM MANAGEMENT

by Balakrishna Rao, Ph.D.

Identifying mildew disease

Problem: Every year on oak trees we see whitish powdery growth on the lower surface of the leaves. We also see a number of small, black specks present in this area. Is this caused by mites? What can be sprayed to control this? (Ohio)

Solution: From your description of the symptoms, the problem you are dealing with appears to be caused by a fungus that causes powdery mildew disease. The black structures you have been seeing are probably not mites, but are the fruiting bodies of the fungus that contain fungal spores. Several different powdery mildew fungi attack oak. These include *Sphaerotheca lanestris*, the most troublesome mildew producer. Others include *Erisiphe trina*, *Microsphaeria alni* and *Phyllactinia corylea*.

An application of fungicides like Acti-done PM, Benlate or Karathane is recommended to manage the powdery mildew disease problems.

It is possible that mites may also be present on the same plant. For detecting mites, shake the leaves over some white paper or cloth. If there are many mites, they will fall and begin to crawl on the white surface. Mites have eight legs while insects have six legs. Mites leave a staining mark on the white surface when crushed. Verify this possibility just to be sure.

If the problem is identified to be due to mites, an application of dormant oil during early spring or an application of miticides such as Kelthane in mid-June and again two to three weeks later should help minimize the problem.

Controlling poison ivy

Problem: We have a major problem with poison ivy plants in some of our clients' properties. What is the best way to control these. Can we use Roundup? (New York)

Solution: Treatments with amitrol (Amizole, Aminotriazol or Weedazol), a post-emergence herbicide, reportedly provides excellent control of poison ivy. It is a non-selective herbicide designed to be applied onto the foliage of perennial broadleaf weeds like poison ivy. It will be absorbed by the leaves and translocated to the stems and roots. It is very effective against poison ivy. Avoid contacting desirable, non-target plants because it will turn the leaves yellow, white and then brown.

Use amitrol as a spot treatment for perennial weeds like poison ivy in or near nursery crops or landscaping. For best results, treat weeds at full leaf, about four to six feet high, and before blooming.

Check with your county extension agent for clearance to use this product in your area. All registrations for the use of amitrol on food crops, including pastures, have been cancelled. Avoid using it in an area where there is a chance of food or feed contamination. A waiting period of six to eight weeks is

required before planting any plant material.

Roundup is also registered for managing poison ivy plants. For managing these apply four to five quarts of Roundup per acre as a broadcast spray or as a 2 percent solution with hand-held equipment. Remember that Roundup will be absorbed through actively growing green leaves. Therefore, thorough coverage is necessary. Repeat applications may be needed for good results. Fall treatments should be made prior to leaves losing green color.

Why power rake?

Problem: Why power rake, since power raking does little to reduce thatch? (Colorado)

Solution: You are right: power raking does little, if anything, to reduce thatch. I don't believe that any professional turfgrass manager or lawn care professional would be recommending power raking to reduce thatch, except under certain situations.

Those who believe in the misconception that the clippings can contribute to thatch development may perform this. However, power raking might be useful in removing excess dead blades or plants that are present, often due to infrequent mowing. This can occur if the turf is allowed to grow tall before mowing, which deposits excessively long clippings. In this situation, blades will decompose slower than if they are mowed frequently.

Ideally, turfgrass should be mowed whenever growth is 1/2 inch taller than the recommended cutting height for a particular cultivar. A good mowing schedule and practice will eliminate the need for removing long clippings.

The areas damaged by insect and disease or abiotic stress factors may also be benefited by power raking to remove the dead or matted blades. **LM**

Series Trenchers

The World's Most Versatile Trenchers.

Designed for more uses, with lower equipment costs.

If your work includes a wide variety of tasks, you need a service line trencher with a new dimension. The fully hydrostatic drive Bobcat 3020 Series trenchers are the world's first true multiple attachment trenchers, featuring Bobcat[™], a revolutionary quick-attach system.

Best of all, 3020 Series trenchers are built with the Bobcat commitment to quality parts and workmanship, and backed by the industry's best warranty.

Check out the versatile Bobcat 3020 Series trenchers today.

Turn your 3020 Series trencher into a high production backhoe with the T906 attachment. Featuring 180-degree boom swing and up to six-foot digging depth.

The heavy-duty parallelogram blade keeps the blade constantly parallel with the ground, providing better, cleaner reclamation of the trench, less scuffing of turf, and more precise placement of the spoil pile.

Introducing **3+3**

3 Trenching Positions + **3** Digging Depths =
Maximum Versatility

3-in-1 digging boom (an industry first) allows 3', 4' and 5' digging depths in one boom with just the use of a grease gun and a small hand tool. 14-pitch interchangeable chain sections extend the digging chain for greater versatility.

Liquid-Cooled Performance and Reliability. Bobcat 3020 Series trenchers are the only 30 hp class units equipped with liquid-cooled engines. Liquid cooling provides consistent performance and lengthens time between maintenance checks. Choose from gasoline or diesel models.

The Added Flexibility of Bobcat's Exclusive 3-position Trencher Attachment. Work close to buildings, fence lines and other obstructions. The attachment can be quickly moved from the centerline digging position to the full offset position. It provides three-position trenching: centerline, 15° off center and full offset, right.

Bobcat[™] is a hydraulic, quick-attachment change system that, when combined with the optional three-point hitch, allows the 3020 Series models to use many Category One attachments.

3020 Series Attachments, Options and Accessories.

- T305 3' to 5' Trencher Attachment
- T906 Backhoe
- P318 Vibratory Plow
- H301 Three-point Hitch
- Six-way Blade
- Rotary Boring Unit
- Sure Grip Tires
- Auxiliary Hydraulics
- Swivel Seat
- Weight Kits

MEET YOUR TALL FESCUE NEEDS WITH THE BEST

Lofts has three of the best-performing tall fescues available. Each one offers all the good looks and tough performance you need:

- Attractive, dark green color
- Fine-leaved texture
- Resistance to drought, disease, insects and traffic
- No thatch buildup
- Adaptability to sun or shade
- Less maintenance than bluegrasses or ryegrasses

New Rebel Jr.* even offers the added advantage of slower growth.

All of these varieties offer good looks, tough performance and low maintenance. When you need a fescue, choose one of the best!
