PART 2

---

# TURFSEED

# POCKET GUIDE

# For a vari

## Fiesta II

Perennial Ryegrass

This advance generation turf-type perennial ryegrass is setting new standards for quality, color, and performance. Its dark green color, fine leaf texture, and environmental tolerance gives you beautiful and functional results, while its high seed count stretches your grass seed dollar. Use Fiesta II straight or in Futura 2000 where it is blended with Blazer II and Dasher II perennial ryegrasses. A genetically superior combination for perennial turf in the North and overseeding in the South.

## Banff

Kentucky Bluegrass

Banff is a vigorous dwarf variety that was discovered on the Banff Springs Golf Course in Alberta, Canada. There, Banff survived twenty years of continual heavy watering, repeated attacks from snow mold, and close mowing on a putting green. Just imagine what it could do for you. Banff establishes quickly and forms a disease resistant, cold tolerant, dark green turf.

## Touchdown

KENTUCKY BLUEGRASS

Since Touchdown's discovery by the late Tom Rewinsky on the National Golf Links of America on Long Island, this elite bluegrass has become the top choice of sod producers. Its aggressive growth habit and rapid establishment crowds out weeds and Poa annua while developing an even, dark green turf.

Mustang is the tall fescue that looks like bluegrass. Its finer texture, darker green color, and wear and drought tolerance have made it the choice for sports field, sod, park, and home lawn use. Mustang is available straight or in TEAM - a three-way turf-type tall fescue blend that also contains Maverick II and Thoroughbred.

Colt is an Oregon produced variety that offers you domestic seed production benefits. It combines superior turf performance and turf quality with genetic adaptation to North American growing conditions. It is dark green, shade tolerant, disease resistant, and very winter hardy. Colt is a vigorous, low-growing variety that has excellent overseeding qualities.

For the fourth consecutive year Victory was the highest rated commercially available chewing's fescue in the national Fescue Trials. Victory is a low growing, shade tolerant variety that has possibly the darkest green color of any other chewing's fescue. It exhibits superior uniformity and disease resistance, too. If you like picking winners, pick Victory.

# y of reasons.

## CROSSFIRE

TURF-TYPE TALL FESCUE

Crossfire turf-type tall fescue is the only strategy you need for battling a summer ambush of heat and drought. Crossfire is a lower and slower growing variety of tall fescue that exhibits a very dark green color. It combines improved heat and drought tolerance with outstanding turf quality to produce a dense and durable turf. Crossfire's high marks in overall performance during its initial evaluation proved it was ready for the field. Let Crossfire show you how to endure a long summer siege.

## SPARTAN

HARD FESCUE

Spartan is a robust, advanced generation of hard fescue that is dark green, leafy, and persistent. It demonstrates excellent cold tolerance and creates attractive, low growing, low maintenance turf. Spartan mixes well with perennial ryegrass, Kentucky bluegrass, and other fine fescues. It is an outstanding component in many shady and low maintenance mixes suited for use on home lawns, parks, and golf course roughs.

## AMERICA

KENTUCKY BLUEGRASS

America is a low maintenance Kentucky bluegrass that has a dense dwarf growth habit, dark green color, excellent disease resistance, and good shade tolerance. Perfect in mixes, America is ideal for golf course fairways, sod production, playing fields, and home lawns.

Pickseed also produces the following quality turfgrass varieties: Agram chewing fescue, Jasper creeping red fescue, Jazz perennial ryegrass, Alpine Kentucky bluegrass, Exeter colonial bentgrass, and National creeping bentgrass.

## SHORTSTOP

TURF-TYPE TALL FESCUE

Shortstop is the little guy with big benefits. As its name implies, Shortstop is a slower and shorter growing variety of turf-type tall fescue. But don't let its stature fool you. Shortstop is plenty tough. It has heat and cold tolerance, disease resistance and is widely adapted. Shortstop forms a beautiful, dense, uniform turf of finer, darker green leaves.

## BRONCO

Kentucky Bluegrass

Bronco is a very wide bladed Kentucky bluegrass that was developed specifically as a mix companion for turf-type tall fescue. While its texture and color gives it the appearance of a tall fescue, the comparison between the two ends there. Bronco is elite Kentucky bluegrass all the way. Its been bred to be less dense so it won't crowd out tall fescue and yet still aggressive enough to fill in and repair damaged areas quickly. That's what makes Bronco ideal for sports turf use.

Pickseed products are distributed throughout North America by quality seed suppliers.

**Turfgrass Areas of Adaptability**

## SECTION 2

*The information on the following pages comes from results obtained by the National Turfgrass Evaluation Program (NTEP).*

*The NTEP is a self-supporting, non-profit program sponsored by the Beltsville Agricultural Research Center of the United States Department of Agriculture (USDA) and the Maryland Turfgrass Council.*

*The program will not make variety recommendations. However, the data from tests can be used by extension agents and others in the turf industry for making recommendations.*

*Data is broken down by mean score and test location. Quality ratings range from 1 to 9 with 9 being a perfect turf.*

*To use the charts, first choose the test site closest to where you are planning to plant grass. Compare the scores of the various varieties and select the one best suited to your area. Remember that no statistical difference is evident between scores with less than the LSD value's difference. In other words, if one variety scores 6.5 for your area and another scores 6.9 and the LSD value is 0.5, there is no significant difference between the varieties; both would be suited to your area.*

*All data on the following pages is 1990, taken from 1989 test readings, unless otherwise noted.*

*National director of the NTEP is Kevin Morris, without whose cooperation this section would not have been possible. For further information, write him at Agricultural Research Center West, Bldg. 001, Room 333, Beltsville, MD 20705.*

## with **Bloomcoat™** Wildflowers

*The Easy Way To Re-create Nature's Gardens*

Planting **Bloomcoat™** Wildflower Seeds makes it easy for golf course superintendents and landscapers to get professional results, with a minimum of effort!

A specially designed, non-toxic seed coating increases seed density and allows for even spreading with even blooming — resulting in a rainbow of color equal to nature's own natural gardens.

**Bloomcoat™** is packaged in reusable, re-sealable buckets and is available in a variety of sizes that will accommodate any job, large or small.

Visit our booth (#3443 & 3445) at the GCSAA show in Orlando!

# Willamette Seed Co.

# We offer more than 10 exclusive varieties of grass seed. But only one color.

At Scott we may offer a lot of exclusive seed varieties. But we have only one set of standards. The highest.

And those high standards begin with our breeding and varietal development. We not only work closely with universities and other seed developers, we have our own extensive in-house breeding program, with our own testing facilities all over the country.

The result? Seed to meet any requirement. Exclusive varieties like our Coventry, Abbey, Bristol and Vicia Kentucky bluegrasses; Accolade, Caravelle, Loretta, Applause and Ovation perennial ryegrasses; Banner Chewings fescue; and Chesapeake and Aquara tall fescues.

But seed development is only part of the story. We have

the most stringent requirements and controls for clean seed in the industry. From grower selection all the way through cleaning, testing and packaging, our standards are uncompromising. In fact, we pioneered the seed business over 100 years ago.

And only our seed comes equipped with a Scott Tech Rep. They're true agronomists, who can make recommendations and develop complete seeding and fertility programs to fit your specific needs and problems.

Of course, we still aren't content. We're constantly working harder to develop even better seed varieties.

Although you can rest assured, we're going to stick with the same old color.

# THE NEXT ECLIPSE IS IN THE BAG.

Why wait around for a once-in-a-lifetime event, when the shining quality of Eclipse is available right now?

Rated number one in trial at Rutgers, Eclipse Kentucky bluegrass is a lower growing, leafy, dark green turf grass variety that consistently ranks at or near the top for overall turf quality and disease resistance (including Fusarium Blight, Dollar Spot and Red Thread) in USDA tests. It shows good seedling vigor, medium texture and excellent density. Plus, it is recognized as a leader in shade tolerance.

Call your local seed wholesaler and tell him you don't want to be left in the dark. He'll give you the turf grass with the glowing reports -- Eclipse.

## Your Source for the Turfgrasses of the 1990's!

**BONANZA**  
TALL FESCUE TURF TYPE

### Still the Tall Fescue of Choice Among Discriminating Turfgrass Users!

A proven performer on home lawns, sod farms, athletic fields or wherever attractive, tough, reduced maintenance turf is required. With its exceptional dark green color, heat and drought tolerance and disease resistance, BONANZA is a year in, year out performer. BONANZA sets a standard by which others are compared.

**Vantage**  
PERENNIAL RYEGRASS

### Beauty and Durability for a Superior View!

All the outstanding qualities you expect from a premium perennial ryegrass plus unexcelled resistance to stem rust. Used alone or in combination with other ryegrasses, bluegrasses or fine fescues, VANTAGE is a solid performer with a wide range of uses and areas of adaptation.

Our commitment to research and production are your assurance that Proprietary Seeds' turfgrass varieties will be among the industry leaders. Call 1-800-228-4119 for our distributor nearest you.

\* COMMERCIALY AVAILABLE VARIETY

NOTE: Warren's new AVANTI ranked 5th for overall turfgrass quality among 65 cultivars tested in the 1989 National Turfgrass Grass Trials Report.

### AVANTI, the turfgrass of tomorrow\* is available from Warren's today

- Faster fill-in after germination.
- Earlier, fuller turf formation
- Finer leaf structure.
- Lower growth habit.
- Excellent 'bright' dark-green color that rivals Bluegrass!

plus . . .

- Less watering!                      More uniform density!
- Less fertilizing!                      More root development!
- Less mowing!                              More drought tolerance!
- Less summer stress!                      More shade and wear tolerance!

Please note: More than half of this year's AVANTI seed production has already been reserved by Premium Sod Growers, Seed Blenders, and Professional Landscapers. We urge you to contact your seed dealer to place your orders as soon as possible.

For information, call 1 800 828-8873 Toll Free. (8 am to 4 pm Pacific Coast Time).

## PERENNIAL RYEGRASS

\*PVP800114

New variety introductions get better and better with every passing year. Significant advancements in turf science and genetics make it possible. This year's Number One introduction, Saturn Perennial Ryegrass, is the most outstanding of all. It ranked first in North American testing at 22 University locations in a just-released report by USDA. Saturn Perennial Ryegrass is setting a new standard that future introductions will find hard to beat.

# Fine Fescue Defined

## What are Fine Fescues and why are they so important to turf managers?

Our Fescue turfgrasses are part of most every park, golf course, industrial campus, athletic field, condominium commons and home lawn from the transition zone, Northward.

But, many people are not aware of that. Perhaps we are the most overlooked turfgrass in existence.

We feel that Fine Fescues are the best turf investment a grounds manager can make. And, we'd like to point out *why*.

Fine Fescues are *real* grass. And, as with all living things, there is give and take. Sure, our Fescues take water and some maintenance, but they are better *givers*. Our natural grass turns noxious gases into oxygen and is a natural air conditioner for turf users.

We feel that while artificial turf has its place on locker room floors, it has no business where *real* people work, play and relax. Our grass is just *naturally* more refreshing.

Our Chewings (*Festuca rubra commutata*) and creeping red (*Festuca rubra rubra*) Fescues are rather unique when compared with other turfgrass species. Although they have most of the features of other cool season grasses, Fine Fescues have several distinct benefits worth noting.

*Fine Fescues are low maintenance.* Our varieties require less fertilizer and water than other species. That's a big *plus* at today's water, fertilizer and manpower prices.

*Fine Fescues fare well around trees.* It seems our grass doesn't need as much sunlight, water and nutrients as other turfgrass species. Because Fescues don't compete with trees for these important elements, they're called *shade grass*. Our Fescues don't creep into flower beds, nor crowd out other species in a mixture.

And, because they're Oregon grown, our Fescues germinate, adapt and perform better than imported types.

## You'd expect to pay a fortune for such a turfgrass, but Fescues are quite reasonable

Why don't Fescues cost a great deal? Fine Fescues have been around a long time and

have been changed very little. Why mess with a good thing? While other former "pasture" species are coming closer to looking like our old standard; receiving notoriety for their "improvements" and enjoy the price increases associated with the word "new," our Fescues have continued what they do best... support the up-and-comers. But then, Fine Fescues were meant to be stepped on.

## Fine Fescues are Ideal for Recreation, Sports and Leisure

Not only do Fine Fescues excel alone or in perennial ryegrass/Kentucky bluegrass mixtures on horizontal playing surfaces; Fescues are excellent for low maintenance areas like berms, roadside banks, ski slopes and hilly spots that don't retain moisture. So, you see, Fescues are ideal all-around grasses for *all around* your recreation and sports facility. Their low maintenance requirements offer *turf managers* a chance for a little more leisure... and there's nothing wrong with that.

For a series of nine tech sheets on Oregon grown Chewings and creeping red Fescues, call or write:

# Nassau

## Nassau

### Nassau

#### KENTUCKY BLUEGRASS

## For early spring greenup and less maintenance:

- Excellent color retention during winter months.
- Stays dark green with less fertilizer compared to other bluegrasses.
- Superior drought tolerance means less irrigation.
- Produces less thatch than other varieties.
- Excellent disease resistance, decreasing the need for costly fungicide applications.

Get it *all* with Nassau.

**Winter color retention**  
and early season color difference between Nassau and another leading bluegrass, Midnight.

## Manhattan II helps smooth out the roughs at Inverness

INVERNESS CLUB, TOLEDO — Superintendent Tom Walker chooses Manhattan II to overseed roughs at this prestigious club because of its wear resistance, quick establishment, dark green color and drought and disease tolerance. But Tom finds Manhattan II's big plus is *density*. Manhattan II actually produces more leaves per plant, an economy sometimes overlooked.

This increased basal tillering, coupled with Manhattan II's lower crown help 'heal' shallow divots by spreading laterally. This is why Manhattan II is used to overseed the range tees at Inverness, too.

Manhattan II was developed to take the abuses hard use areas demand, and look good while doing so. Give it a divot. Rough it up a bit. Manhattan II can take it. Just ask Tom Walker at Inverness Club.

# MEET YOUR TALL FESCUE NEEDS WITH THE BEST

Lofts has three of the best-performing tall fescues available. Each one offers all the good looks and tough performance you need:

- Attractive, dark green color
- Fine-leaved texture
- Resistance to drought, disease, insects and traffic
- No thatch buildup
- Adaptability to sun or shade
- Less maintenance than bluegrasses or ryegrasses

New Rebel Jr.\* even offers the added advantage of slower growth. All of these varieties offer good looks, tough performance and low maintenance. When you need a fescue, choose one of the best!
