

Preemergence weed control —the way to go for ornamentals

Time is money. It's a cliché, but it's also an adage with merit. For turf and ornamental professionals, time spent handweeding ornamentals is simply time taken from other tasks.

Free up some of that valuable time with Snapshot® 2.5TG pre-emergence herbicide, a top-per-

forming, competitively-priced herbicide that makes it seem like there's another crew member on-site. Except Snapshot doesn't punch a time clock. Actually, it works 'round the clock—for up to six to eight months.

Snapshot is ideal for landscape ornamentals and prevents 111 broadleaf weeds and annual grasses. Snapshot can be used over the top of ornamentals, and is non-staining.

After activation by one-half inch of rainfall or irrigation, Snapshot sets up a solid control area around weed seedlings. As the weed seeds germinate, Snapshot disrupts their development and seedlings gradually die before they ever break the soil surface.

Snapshot contains the active ingredients isoxaben (the same

ingredient in Gallery® herbicide) for the prevention of broadleaf weeds, and trifluralin, (the active ingredient in Treflan® herbicide) for the prevention of grassy weeds. These two ingredients form an unbeatable team for controlling weeds.

Always apply Snapshot prior to germination of target weeds, which generally occurs when the soil temperature, not the air, reaches 52 degrees Fahrenheit.

So for weed-free ornamentals there really is only one choice—Snapshot pre-emergence herbicide.
