# Eastern landscape pros: 'Send us rain!'

As Hurricane Dennis spun in Atlantic and threatened the Eastern seaboard, landscape and lawn care pros in that area didn't know whether to fear it or welcome it — so desperate were they for rain.

Hardest hit by this summer's drought were the Northeast and the Mid-Atlantic states. Landscapes from Virginia, north into New England and west into parts of the Midwest suffered. The lack of rain forced communities in many Eastern cities to restrict water use for much of the summer.

The U.S. Department of Agriculture in August reported that the drought affected about 20% of the country. By comparison, the 1988 drought reached 35% of the country, while the drought at the height of the Dust Bowl in 1934 covered two-thirds of the country.

"Right now (mid-August) we're pretty much shut down," said Craig Martin, Green Lawn Care, Cumberland, MD. "We had been fairly busy with insecticide applications, but we're waiting for some rain now. The last decent ground moisture we had was about mid-April."

Martin said he expects some of his clients' lawns to show drought damage, but he wouldn't speculate on how much. "Lawns are pretty resilient, and a lot of them will probably come back," he said.

Vincent Tummino, Lawn Doctor, Sayerville, NJ, said the drought resulted in some minor cancellations in his business, but nothing unexpected in light of the conditions. "Most people realized that weather was the biggest factor," he said.

Because of the dry conditions, damage caused by chinch bugs and sod webworms became more apparent, too, he added.

Some landscape managers reported that they curtailed (or stopped) commercial mowing in mid-summer because the turf had stopped growing.

Others said they are considering delaying some of the plant care tasks they normally do in the late summer until later in the season—maybe even spring, depending on early fall rains.

### Some explaining to do

"This drought will have an effect for many years to come," said Dan A. Cheslock of Mountaineer Lawn Care Inc. of Morgantown, WV. Clients need to be educated *now* that parched plants of all sizes will require replacement, he cautions, adding that landscape managers can expect this scenario to play out over a lengthy period.

"Three years down the road, it's going to be tough to tell people that their trees are dead because of a 1999 drought," Cheslock said. "People may

## LM's CD-Rom links to Internet

**CLEVELAND** — It's coming. *Landscape Management's* new Internet-linked CD-ROM will be mailed later this year, just in time for viewing on those slow, cold winter days. This new product combines suppliers' landscape and lawn care product videos with photographs and product specifications in one central source you can use again and again. Watch the equipment you need in action. Then, it's easy to click through directly to the supplier's internet site for more information.

It's the first time this *Landscape Management* product will be mailed with our reformatted and expanded GreenBook 2000. Watch for the new and expanded product listings, helpful yellow-page format, updated industry resources, Web listings and technical information sheets. For more information, contact LM at \_\_\_\_\_.

develop the inference that you killed their tree."

On the plus side, Mountaineer plans to pick up additional clients from among the do-it-yourselfer ranks. "We look for a good season in 2000 because people will look at all the weeds in their lawns and say, 'I need help,' and a lot of lawns are in rough shape."

The deep-root tree feeding that Cheslock typically offers in late summer and early fall is in peril due to soil so dry that it defies penetration. "You can dig down two to three feet and just hit powder," he said.

On the lawns, a regular fall application is going to be a really tough sell unless there's some hurricane-like rainfall — and soon, he said. "If we haven't had any rain by mid-September, we'll hold

off on the renovating until the spring, even though we prefer the fall."

Landscape managers in some areas are being advised that replacement of damaged plant specimens and any new installations be delayed until the parched ground itself recovers.

"I would say wait until spring because the water table is so low," said Frank Elefante of Nielsen-Elefante Nurseries in Lincoln Park, NJ. "The downward pull from the dryness is so acute that the water goes right through and doesn't soak in — the plantings won't survive."

Elefante observes that this summer's oppressive heat has added additional stress. "You have a lot of plants that are scorched," he reported.

## Textron acquiring OmniQuip

Textron Inc., Port Washington, WI, is merging with OmniQuip International Inc. OmniQuip builds light construction equipment, including skid steer loaders. The agreement provides for an all-cash tender offer of \$477 million by Textron for all of OmniQuip's outstanding shares of common stock and is expected to close by Sept. 24.

## Western Productions' varieties

Western Productions Inc., Woodburn, OR, reports that its Westlawn WP 200 and Westlawn RSII perennial ryegrasses are in good supply with stable prices, as are its turf-type tall fescue varieties WPEZE and Good-En. Average quantities of blue-grasses, Gateway and WP888, are available. Prices are slightly higher for Gateway as well as for Kenicott creeping red fescue. LM inadvertently omitted these varieties in its August seed report.

## LA schools getting \$100-million landscape

**LOS ANGELES, CA**— The country's second-largest school system is spending \$100 million to install turf, trees and flowering plants at 800 school sites.

"This is the largest landscape project in the history of Los Angeles," said

Guillermo Aguilar, coordinator of the Greening Program. "By the year 2003, more than 18,000 new trees will be planted and up to 20 million sq. ft. of asphalt will be replaced by turf and gardens," he said.

The concept is catching on nationwide, Aguilar said. "Already, we've been contacted by other school districts."

LA's effort, involving government agencies, consultants and civic groups, took form after voters approved Proposition BB, a \$2.4-billion school repair plan. Initially, half of the funds earmarked for 400 school projects were to be spent on

*"All of these improvements come with a price tag that is less than what it would have cost to pave over the same square footage with asphalt."*

asphalt blacktop, but now 30% of the district's blacktop will be replaced by horticultural projects.

"By planting trees that shade air conditioning units—and that shade south, west or east walls of buildings—energy demand is significantly reduced," said Andy Lipkis, president of TreePeople, a group supporting the project.

At the Raymond Avenue School, the first project to be completed, 80 new trees and a turf kickball field replaced an asphalt lot. "All of these improvements come with a price tag that is less than what it would have cost to pave over the same square footage with asphalt," Aguilar explained.

Robert Hamm, deputy director of maintenance and operations, faces the challenge of installing the landscape. Currently, the system has only nine staffers for the 419 schools within the initial Greening Program projects.

"You need to be able to supply the resources to maintain the landscapes after you put them in," Hamm pointed out. "Getting community organizations involved is important."

## Introducing Turfmaker Junior. Welcome to the family.

Now you can get the productivity of a Turfmaker II in a compact machine. Proudly announcing the Turfmaker Junior — the latest in our line of high-capacity seeders

that prepare the perfect seedbed to give you uniform germination.

Turfmaker Junior's 11-bushel hopper delivers everything from bluegrass to fescues without bridging. Four- and six-foot widths make it exceptionally maneuverable. And thanks to the standard speed-up kit, you get the same high seeding rates that run in the entire Turfmaker family.

Call us at 1-800-409-9749 or visit our Web site at [www.brillionfarmeq.com](http://www.brillionfarmeq.com) for more information. Junior's waiting to come out and play.

## The ultimate turf site? It's getting there

Bookmark [www.msu.edu/user/karcherd/turfinks](http://www.msu.edu/user/karcherd/turfinks) on your computer. This site on the Internet is ambitiously known as "The Ultimate Turfgrass Links Page." That's pretty close to being true because this site has links to 435 (and still growing) turfgrass-related Web sites.

Douglas Karcher, 27, a graduate research assistant at Michigan State University, designed and maintains the "ultimate" site which, with a mouse click or two, can whisk a user from information about mowers and other hardware to the latest research on seeds, insects, weather . . . or just about anything related to commercial turf management. **It started at school**

"Since I added the forms to suggest sites, I've been getting a lot of feedback from site users. They really help me keep the site up to date," says Karcher, who is nearing completion of his Ph. D. at MSU.

Karcher says he sits down at the computer about once a week to update the site and read e-mail suggestions from visitors. He says his "ultimate" site gets about 1,000 hits a month.

— Ron Hall

## THE ULTIMATE WHEELBARROW

Spreading mulch and compost by hand is a costly, labor intensive process. It limits production and puts workers at risk for injuries. The Express Blower will turn an inefficient process into a profit center and blow your competition away!

The Express Blower can be operated by one person, with remote control, in any weather, on any terrain. Spread mulch, compost, soil mixes, playground chips or any number of other organic materials for landscaping, lawn restoration, erosion control and much more.

With our ALL NEW Injection System, the Express Blower can inject seed, fertilizer or other additives WHILE BLOWING! Install a lawn with soil mix and seed, or blend weed inhibitors with mulch. You can even topdress and overseed turf with only one application.

Get a jump on your competition. Call today and find out how you can expand your possibilities with an Express Blower!

Visit our web site at [www.expressblower.com](http://www.expressblower.com)

A division of Rexius Forest By-Products, Inc., Eugene, Oregon

### 5 MEN AND A WHEELBARROW

A typical 5-person crew can spread 8 cubic yards per hour.

### 1 MAN WITH THE EXPRESS BLOWER

One person, can blow 30 to 100 cubic yards per hour.
