'No clog' performance

PTO-driven DriftBuster snowthrowers for **Grasshopper's** full line of True ZeroTurn mowers deliver "no-clog" performance, even in deep or heavy, wet snows. A discharge spout controlled from the operator's seat rotates a full 180° to deliver snow up to 30 ft. away. Available in 48- and 60-in. models, the units feature heavy-gauge welded steel construction, a high-speed 12-in.-diameter auger and a heavy-duty replaceable scraper blade. An optional steering lever-mounted joystick control allows easy lifting of the auger and rotation of the chute from the comfort of the winter enclosure. ThrowMoreSnow.com

Busy bristles

Pro-Tech introduces five new Sno Broom attachments for skid steers and compact tractors. Sno Brooms minimize the potential for damaging surfaces and easily remove snow against curbs and walls. Skid steer models are available with 60-, 72- and 84-in. broom widths. They include a universal coupler for attaching to equipment with various hydraulic flow ratings and can be hydraulically angled 30° left or right. The PTO-driven tractor model is designed for machines with at least 30 hp. ProTechCorp.com

Quiet power

Ariens' AMP 24 Sno-Thro is an all-electric two-stage snow thrower with a 24-in. clearing width. The machine runs between 45 and 60 minutes on a single charge, depending on snow conditions, and provides a quieter alternative to traditional gas-powered snow throwers. The AMP 24 Sno-Thro is powered by a 4-hp brushless DC electric motor and energized by two 48-volt AGM Valve Regulated battery packs. Advantages include an easy start, reduced service requirements because there is no gasoline engine — and no associated gasoline costs or special storage requirements during summer months. Ariens.com

Compact maneuvering

Compatible with small skid steers, compact tractors and small wheel loaders, the new Compact-Duty plows from **Arctic Snow and Ice Control Products** are designed for clearing small parking lots, sidewalks and larger driveways. The CD plows reduce fuel and salt usage by increasing pushing efficiency and eliminating follow-up

plowing. Unlike traditional one-piece moldboard plows, the Sectional Sno-Plows feature a sectional moldboard design. Each 24-in.-wide section is also equipped with a spring-loaded trip edge and polyurethane cutting edge for precision plowing. The plows are outfitted with Sectional Sno-Plow's patented Slip-Hitch system, providing faster, easier and more efficient operation. The system allows the plow to adjust and readjust to the pavement grade, resulting in fewer missed areas and less follow-up plowing. *Sectional-Plow.com*

ATV attachments

The **Meyer Path Pro** is designed for clearing snow from sidewalks or other tight areas not suitable for a plow truck. Paired with the Meyer Base Line-125 spreader, an ATV turns into the perfect snow and ice management vehicle. Path Pro, a commercial-grade, full-trip plow available in 50- or 60-in. widths, features highway-inspired flared wings that scoop and funnel snow faster and farther. The BL-125 tailgate spreader's low profile allows salt, calcium chloride, fertilizer and seed to disperse closer to the ground, providing better control of material output. At the heart of the BL-125 is an elevated heavy-duty electric motor, built to withstand the harshest winter conditions. *MeyerProducts.com*

Flare flair

The new VF series trip-edge V-plows from **Hiniker** feature deep-curl flared wings, providing the capacity to cast deep snow far and high. Double-acting hydraulic cylinders provide positive hydraulic control of moldboard positioning, whether plowing forward or back-dragging. Super-bright quad halogen headlights have up to twice the power of typical sealed beam lamps. Independent high-clearance trip-edge design provides smooth operation and enhanced protection. *Hiniker.com*

PERFORMANCE YOU CAN TAKE TO THE BANK!

A penny saved is a penny earned. But how does saving up to 680,000 pennies – \$6,800 – per vehicle/per year sound for your operation?

- SAVES Maintenance**
No pulleys, sprockets, belts or chains.
- SAVES Material**
Independently controlled auger and spinner speeds.
- SAVES Manpower**
Patented auger drive systems ensure continuous flow.

Get the drift

The FFC Snow Blower by **Paladin Construction Group** turns a skid steer into a mini snow-plowing machine for small to medium snow-removal jobs. This two-stage hydraulic blower is available in both standard and high-flow models that range between 4 and 8 ft. wide, with shroud openings of 25 or 36 in. The 18-in. auger cuts as deep as 36 in. into snow and drifts, and then throws it up to 45 ft. away from your clearing surface. Choose from an electronic or electro/hydraulic powered, poly-lined chute and deflector that reduces clogging and makes direction adjustments quickly. High-flow models never require a case drain. To ensure a cleaner and safer surface, FFC Snow Blowers have replaceable, wear-resistant hardened

edges that can be changed when they become dull. *PaladinConstructionGroup.com*

Clean machine

The **Gravely** Power Brush 28 features a 28-in.-wide head for fast clearing work, and the height adjustment system accommodates various surfaces and optimizes brush wear. The brush head also rotates 40°, with an operator-controlled pivot lock. Powered by a 169cc all-season EX 17 Subaru engine, the unit features an electric start and an automatic traction control system. It can be used year-round for snow removal, lawn de-thatching and clearing sand, dirt, grass clippings or other debris. *Ariens.com*

To the max

Offering a 2-cu.-yd. hopper capacity, the V-Maxx 8550 High Output spreader from **SnowEx** features a new transmission with a gear ratio of 40:1. This allows the unit to spread 295 to 680 lbs. of material per minute (3.6 to 8.3 cu. ft. per minute), which triples the rate of the comparable V-Maxx 8500 model. Designed to spread sand, the V-Maxx 8550 comes standard with a patented multi-angle hopper, an inverted-“V” baffle and an attached vibrator. For reduced maintenance, the spreader’s hopper is made from corrosion-resistant polyethylene. Plus, there are no engines, pulleys, sprockets, belts or chains to maintain. The unit is completely electric-powered with a high-torque, 0.5-hp motor, and all electrical components are fully sealed for weather protection. *TrynexFactory.com*

Spread success

The new SS575 salt spreader, for the **Ventrac** 4000 series, is for winter services and spreading materials such as bagged rock salt and calcium flake. With the optional gate installed, the SS575 can also spread bagged ice melters and calcium pellets. An optional vibrator kit also allows for bulk salt to be spread. The SS575 spreader features a 5.75 cu. ft. hopper capable of carrying 460 lbs. A see-through weather cover for the hopper comes standard. An electronic control box also comes standard, and features an electronic speed control and on/off switch. An optional drop curtain is available for spreading material in tight quarters such as sidewalks, parking garages and more. *Ventrac.com*
