poa annua?

not a sign of it after **Betasan**<sup>®</sup>

If you have a *poa annua* (annual bluegrass) problem in lawns or turf, use Stauffer's new pre-emergence herbicide . . . BETASAN.

BETASAN controls *poa annua* when it starts—when the seeds germinate. And the time to use it is now—from mid-July to mid-September! This stops fall infestations of *poa annua*, and allows the desirable perennial bent, fescue and bluegrass varieties to fill in during their period of most rapid growth—during the cooler weather.

Besides *poa annua*, BETASAN controls many

other annual grasses including *goosegrass* and *crabgrass*. It even controls some annual broadleaf weeds. Application dates vary according to the weed. For instance, crabgrass is controlled best by applications between late summer and spring.

Write for our free brochure: "BETASAN Control for Crabgrass and *Poa Annua* in Greens and Turf," for details on how to use BETASAN.

Stauffer Chemical Company, Agricultural Chemical Division, 380 Madison Avenue, New York, N. Y. 10017.
