

## Now you've really got things stacked against summer turf disease

Here are your three best programs for control of *all* major summer turf diseases. Just pick one—any one—and start spraying now!

**New KROMA-CLOR™** (with turf color) gives you total summer disease control in a single package. There's nothing to add except water! KROMA-CLOR has that "extra punch" to keep brown patch out of the picture all summer long—even during the hot, humid weather when it usually thrives.

**New ULTRA-CLOR™** gives you exactly the same total protection as KROMA-CLOR, except that ULTRA-CLOR doesn't contain turf color.

**KROMAD® plus CALO-CLOR®** is the program you've used successfully for years. Your regular weekly application of KROMAD provides broad-spectrum control. During severe brown patch weather, just add a little CALO-CLOR to your tank mix.

Each of these three programs gives you entire-season control of brown patch, dollar spot, copper spot, red thread and the leaf blights.
