

When you have
DYRENE
FUNGICIDE
on your turf

you don't have

Helminthosporium Diseases
(blight, leaf spot, melting-out)
Copper Spot
Rust
Sclerotinia Dollar Spot
Brown Patch
Snow Mold (Typhula)

®DYRENE fungicide controls all major turf diseases. Because of its unique properties, fungicidal effectiveness and long-lasting power, DYRENE fungicide makes a preventive program completely practical. If you use this one material all season long on a schedule, you can prevent fungus diseases at a low cost per season.

DYRENE fungicide is dyed green to blend with the turf and thereby eliminate the unsightly appearance of spray deposits on treated areas (and once it has dried, the dye does not stain shoes or fabrics).

DYRENE fungicide may be used in all common types of spray equipment. It is a 50% wettable powder that provides a good suspension in water . . . won't harm the spray equipment, clog nozzles or corrode metal parts.

For broad spectrum fungus control, ask your dealer for DYRENE wettable powder . . . another quality Blue Bullseye product from Chemagro.
