FOR SOD AND BIGGER JOBS
8' and 10' TURF-MAKER tucks seed at 1/2" depth, as recommended for sod farms and other large acreage seedings where natural moisture and growing conditions prevail. TURF-MAKER provides an infinite range of seed settings for precise metering of the finest, costliest seeds.

BRILLION SEEDERS for Landscapers and Sod Growers

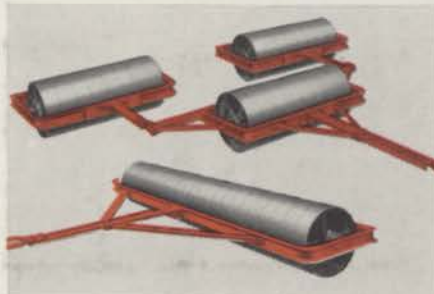

Compare your present method. One man with a Brillion can seed up to 50 acres of lawn or sod per day — eliminates extra operations and equipment — and costly hand labor. In fact, many users report that their Brillion paid for itself on its first job.

Only Brillion offers you the seeder that fits your operation. There's the 5'4" pick-up model for small contract jobs — now available with the *new* optional 230-lb. capacity fertilizer box kit. Or you can choose the Turf-Maker — the most precise grass seeder made for sod growers and larger seeding jobs — in 8' and 10' sizes. Both types are designed to tuck seed accurately and uniformly in the top 1/4" or 1/2" of the soil for fast, complete germination and healthy, profitable yields. And our Smooth-Roller Pulverizers enable you to properly condition new seedbeds as well as established lawns.

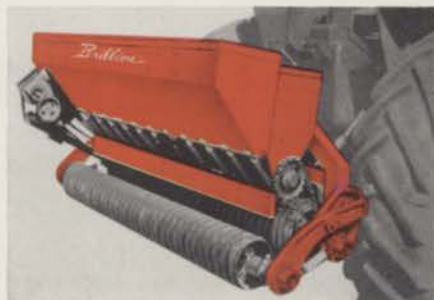

Brillion's large hoppers minimize re-fills. Clean design permits you to hug fences, trees and building foundations to minimize hand broadcasting. In addition to the fertilizer box kit for the 5'4" model, options include transport wheels for the 8' and 10' Turf-Maker, and 3-point Category II pick-up for the 8' size. Mail coupon for additional information.

FOR SMALLER JOBS
5'4" pick-up model tucks seed in top 1/4" of soil, the ideal depth recommended for closely controlled moisture and depth conditions.

SMOOTH-WHEEL PULVERIZERS
for smoothening humps and winter-heaves in established park, golf course, institutional and turn-pike lawns. Choice of 9', 10'6" and 12' single rollers and triple-gang models to 20'.

NEW FERTILIZER BOX KIT
for existing and new 5'4" seeders. Hopper holds 230 lbs. of granulated fertilizer and can be set to broadcast at 25 to 200 lbs. per acre as you seed.

IF BRILLION BUILDS IT — IT HAS TO BE GOOD!
