

Superintendent Jerry Palmer, Chula Vista Municipal Golf Course, Chula Vista, Calif.

When these sprinklers were turned on, a new era began

Jerry Palmer is one of the first to have total control of his watering system.

When he put in new sprinklers at Chula Vista Municipal Golf Course, he put in Buckner's new CP-2 Dual Central Programmer. It makes all previous central controllers seem like crude prototypes.

Because the CP-2 Dual Central Programmer is so sophisticated, it doesn't require expensive conventional field controllers. The less expensive, less complex FC-10 Field Controllers, along with the CP-2, give him complete control of the system from his "doghouse," but cost less than a conventional automatic system would have. He doesn't have to make the rounds of remote automatic sprinkler controllers, except for inspection. So he'll save time and labor costs as well.

The revolutionary Buckner CP-2 Dual Central Programmer incorporates two independent sets of controls which operate up to 30 Field Controllers each. Palmer can operate it automatically, semi-automatically, or manually with 14-day programming and adjustable station timing.

On frosty or dewy mornings, he'll be able to syringe the greens in 20 minutes. In about an hour, he can syringe the entire course — it's ready for play. The syringe cycle of

the CP-2 is infinitely variable, 1.7 to 5.0 minutes, and overrides all timing programmed in Field Controllers.

What if it starts to rain? With the "omit" switch, Palmer can stop all sprinkling, whether the CP-2 is on programmed irrigation or the syringe cycle. All Field Controllers will automatically return to "off."

Learn more about how the amazing CP-2 Dual Central Programmer can give you total control of your watering.

Call your Buckner distributor or send in this coupon, and we'll arrange a demonstration.
