Dept. H.D., Westport, CT 06880.

# Here's help to maintain the beauty of your grounds!

Yes, reliable help. Economical help. Help against scores of different weeds, insects, and diseases that constantly threaten your greens, fairways, trees, shrubs and flowers. Help that comes from your supplier of all these Stauffer products.

Aspon® insecticide, the quick, long-lasting control for chinch bugs, devastating destroyers of turf. Usually just one application a season in the north, two in the south.

Betasan® herbicide, the sure preventive for crabgrass and goosegrass. Excellent for your campaign against poa annua in your greens. Not harmful to any of the permanent turf grasses.

Eptam® herbicide is the sure control for annual weeds in sand traps. Also controls persistent perennial weeds like nutgrass and quackgrass. Excellent for flower beds and shrubs, too.

Imidan® insecticide protects trees from destructive gypsy moth, elm spanworm, spring cankerworm and birch leaf miner. (Northeast only.)

Vapam® liquid soil fumigant cleans the soil of pests so you can replant grass, trees, and shrubs. Destroys weeds and their seeds, insects, nematodes and many fungous organisms. And you can replant without a long waiting period.

Dyfonate® soil insecticide, one of the newest effective controls for chinch bugs used by commercial operators in the southeast.

Captan fungicide is the reliable control at very low cost for brown patch, leaf spot, melting out and several other turf diseases.

Try these Stauffer products, liquid, granular and wettable powder forms, to protect beautiful grounds. For full information . . . just fill out and mail the post-paid card insert above. Stauffer Chemical Company, Agricultural Chemical Division, Dept. H.D., Westport, CT 06880.

Turf and Grounds Products from

The Chiba facility (top left) is quite large. Here the U.S. duo discuss injection with Mr. Nishiyama (1) and Mr. Kikuchi. Later, they view an antiquated form of inject (top right) currently being used. Walt Money and Dale Dodds then visit the Manazuru Prefecture Park southwest of Tokyo (left). That's Dale on the right. They meet with Dr. Yonabayashi (above left), director of Chiba Prefecture Forestry Exp. Sta., and Mr. Kikuchi, president of Maruwa Boussan Co.

## Mauget Tree Injection Officials Visit Japan

The manufacturer and a distributor of the J.J. Mauget Company recently toured selected parts of Japan to witness the results of tree injection.

Dale Dodds and Walter Money, Guardian Tree Experts, Inc., visited Tokyo in late 1973 to inspect tree injection of Japanese trees. Their host during the week tour was Mr. Kikuchi, president of Maruwa Boussan Co., a trading company in Tokyo, and his assistant Mr. Nishiyama.

Areas visited included the Emperor's palace garden, the Japanese department of agriculture, Chiba Prefecture Forestry Experimental Station north of Tokyo, and the Manazuru Prefecture Park.

"On a previous visit we had in-

## HANNAY REELS KEEP HOSE ON THE JOB

You can handle more hose, handle it faster, easier and with greater safety when you install Hannay reels on your spray equipment. Reel handling will keep your hose in service longer, too.

Choose your reels from the widest selection of sizes and rewind options for standard or high pressure service. They're all described in Catalog H-6612-ID. Send for your copy.

Phone: 312/974-3000

## The cost of weeds is growing higher.

But it's one cost you can easily eliminate.  
Not just cut, but eliminate altogether.

How?

Simply by calling in a Custom Applicator,  
a weed and brush control expert.

He's listed under "Weed Control Service"  
in the yellow pages.

Ask him about spraying with KROVAR<sup>®</sup> I  
weed killer or HYVAR<sup>®</sup> bromacil weed killer.

Both kill most costly weeds with a single  
spraying each season. It's more  
economical than cutting weeds all season  
long. And more effective.

And no longer will weeds grow to trap  
moisture that accelerates deterioration.

No longer will rodents and other pests  
find weeds to nest in.

No longer will weeds create  
fire and safety hazards.

And no longer will weeds interfere with work.

Let a Custom Applicator eliminate weeds  
and their costs in one easy spraying.

Give him a call.

**INDUSTRIAL HERBICIDES**

Gary Kobylski (r) discusses turf management with Dr. Ray Dickens, his advisor at Auburn University. He is the first Alabamian to be awarded the annual scholarship given by the Southern Turf Association.

## Alabama Student Wins Southern Turf Scholarship

W. Gary Kobylski, Tallassee, was recently awarded the annual ac-

ademic scholarship given by the Southern Turf Association. A junior at Auburn University, he is the first Alabamian to ever receive the honor.

The Southern Turf Association is a professional organization made up of persons in the turf grass industry. The Group is made up of ten southern states.

Upon graduation, Kobylski will become one of the first students to graduate in the new turf management curriculum offered through the department of agronomy and soils at Auburn. He is presently president of the University Agronomy Club, and plans a career in golf course management after graduation.

The son of Mr. and Mrs. Henry A. Kobylski, of Tallassee, Gary will receive his award at the annual convention of the Association, March 4, 5, and 6, in Memphis, Tennessee.

## MAUGET TREE (from page 84)

jected several trees with Mauget products," says Dodds, "Our purpose was to determine if these trees had benefited from the treatment."

"Of particular interest are the black pines in Manazuru Park," he said. "The Japanese are fearful of an insect problem in these historic trees. Tests with Injecticide are looking good."

**LEGAL NOTICE**

POWER AUTHORITY

OF THE STATE OF NEW YORK

JAMES A. FITZPATRICK

NUCLEAR POWER PLANT

ADVERTISEMENT FOR PROPOSALS

FOR

LANDSCAPING

IN THE

TOWN OF SCRIBA, OSWEGO COUNTY

NEW YORK

CONTRACT NO. A20

**NOTICE TO CONTRACTORS: THE POWER AUTHORITY OF THE STATE OF NEW YORK will receive sealed proposals for Contract No. A20 for Landscaping for the James A. FitzPatrick Nuclear Power Plant at Nine Mile Point, Town of Scriba, Oswego County, New York until 10:30 AM Eastern Daylight Saving Time on the 14th day of March 1974, at the Authority's Office, the 18th Floor, The Coliseum Tower, 10 Columbus Circle, New York, New York 10019, at which time and place the proposals will be read aloud.**

The principal items of work consist of furnishing and planting the following:

Estimated:

210 Shade Trees, 6 ft. to 12 ft.

39 Shrubs, 6 ft. to 7 ft.

116 Shrubs, 18 in. to 24 in.

All work shall be completed within sixty calendar days from date of commencement. The work shall be started on or about April 1, 1974.

Plans, Specifications and Proposal Forms for the work may be obtained from the POWER AUTHORITY OF THE STATE OF NEW YORK, 18th Floor, The Coliseum Tower, 10 Columbus Circle, New York, New York 10019, upon application and prepayment of a fee of Twenty-five Dollars (\$25.00) per initial set of contract documents, and Fifteen Dollars (\$15.00) per set for additional sets, no part of which will be refunded. Plans, Specifications and Proposal Forms for the work will be on file in the Authority's Office and in the office of the Engineer, Stone & Webster Engineering Corporation, 100 Federal Street, 18th Floor, Boston, Massachusetts 02107, and may be inspected by prospective bidders during office hours.

Prospective bidders visiting the site of the work shall first contact the Superintendent of Construction, Mr. C. E. Goodman, at the Engineer's Field Office in Scriba, New York, during office hours. (Telephone (315) 342-1168)

Bids must be made and returned in triplicate in accordance with instructions contained in the Information for Bidders. Guarantee will be required for each bid in an amount not less than 20 percent of the gross sum bid.

The right is reserved to reject any or all bids.

"Mr. Johnson? Remember me? I worked for you last summer!"

## trimmings

**ASTROMOTH**—that's what they call 'em. Gypsy moth eggs started to hatch aboard Skylab, said the astronauts. NASA put 500 wild eggs and 500 laboratory reared eggs of gypsy moth aboard the space station. So far several of the wild eggs have hatched. Nothing happened to the lab reared eggs. What does it mean? Simply that gypsy moth eggs can hatch in zero gravity. This could end the moths' normally long hibernation period in USDA's sterilization program. Earth experiments to induce egg hatch earlier have failed. Exposure to zero gravity for a sustained period offers a potential breakthrough.

**DIESEL** engines account for about 85 percent of the engines purchased in new farm tractors, says the Farm and Industrial Equipment Institute (FIEI). In the larger sizes, the numbers approach 100 percent. Dependence on diesel fuel has been increasing steadily over the years. In 1967, 75 percent of the tractor horsepower provided agriculture was related to diesel.

**DAY LENGTH** is the only constant environmental variable for insects to key their body functions to and prepare for overwintering. The tiny changes in the day length trigger a "biological clock" within the insect's brain. Changes take place in the body chemistry which result in a condition known as insect diapause. There is an increase in body fat and a decrease in respiration rate and feeding. Reproductive organs in both insect sexes become non-functional. Research from Canada indicates that some diapausing insects produce glycerol which serves as an anti-freeze agent, allowing insects to withstand extreme cold temperatures.

**ONE MINUTE** of time saved each day gives an extra half hour each month.

**THE SENSE OF URGENCY** to clean up the environment and to make life safer has brought on some hasty governmental actions, says Parke C. Brinkley, National Agricultural Chemicals Assoc. "Much of this action was born of expediency rather than of thoughtful weighing of consequences. Some of agriculture's most valuable production tools have been removed or drastically cur-

tailed. Little more than lip service has been given to the necessity for measuring benefit against risk, or to the fact that certain trade-offs may be in our best interests. We have seen it happen with certain pesticides, fertilizers, growth stimulators, and energy.

"Behind it all is the fact that the environmentalists' view of agriculture has been largely based on its contribution to pollution. There is little understanding of the vital role played by fertilizers and pesticides in the production of food and fiber . . ."

**SAFETY IS A FULL-TIME JOB** is the second safety film now available through Charles Machine Works, Inc. It's 17 minutes long. The story line centers around a construction superintendent charged with his company's safety program. It's available in either 16mm reels or in Super 8mm cartridges. For more details, contact a Ditch Witch dealer or Tom Tucker, Charles Machine Works,

Inc., P.O. Box 66, Perry, Okla.

**OSHA INSPECTIONS** are on the rise. Department of Labor statistics show the weekly average of inspections for November more than double that of a year ago. In November 1973, OSHA issued to employers 5,301 citations alleging 27,870 violations of job safety and health standards. Proposed penalties totaled \$680,881. The bulk of inspections continues to be centered around manufacturing and construction. But inspections of agricultural facilities accounted for 27, up 52 percent over the previous year.

**LOUISIANA'S PINEY ROOTERS** know a good thing when they root it. Seems like almost half of every tree cut for marketing remains unused. Wasted parts amount to about 40 percent of most trees cut. Of this, about 16 percent is in the tree root. Researchers are now looking for ways to use a greater portion of this waste, besides letting the hogs root around it.

## YELLOW FOXTAIL (*setaria lutescens*)

By **DR. WAYNE W. HUFFINE**  
Professor of Turf Management  
Department of Agronomy  
Oklahoma State University

Yellow foxtail is a tufted annual grass commonly found throughout much of the United States, except for the cooler northern areas. Sometimes it is mistaken for crabgrass and its occasionally called Yellow Bristlegrass because of its tightly clustered seed heads with greenish, yellow bristles, resembling the tail of a fox. The stems are flattened and the lower parts are often tinged with red.

The seed germinates in late spring or early summer, and the plants reach maturity by mid-summer. After producing an abundance of seed for the next year's infestation, it dies after the first heavy frost in the fall. This unwanted turfgrass weed seems to flourish in most all growing sites except shade.

**EDITOR'S NOTE:** An 8½ x 11-inch color print of Yellow Foxtail shown at the right is available, at no charge, by writing to: O. M. Scott & Sons Company, Marysville, Ohio 43040.
