The three advantages of advertising when almost everyone is hiding.

I. Your company stands out.

A very comprehensive study,* covering 26 years of data from 1947 to 1973, shows that companies who don't cut advertising during a recession year do better in sales *and profits* than those who pare their budgets.

And when sales rebounded, the noncutters rebounded a lot better than the cutters did.

	1000	1020	1070	1071	1070	1079
tal add to be	1968	1969	1970	1971	1972	1973
Maintained budgets in 1970 & 1971	100	118	123	135	156	200
Cut budgets in both 1970 and 1971	100	111	109	111	122	145

2. Your brand stands out.

A McGraw-Hill survey of their business magazine readership indicates that a company's advertising can affect a company's reputation. Some of the reader comments:

"If I didn't see their ads, I would

begin looking for a second source of supply because I'd consider them a dying organization."

"I feel that a strong ad indicates strong management."

"I buy from someone who advertises ...it spells quality to me."

3. Your salesmen stand out.

An article published in the Harvard Business Review ("Industrial Advertising pays off," Harvard Business Review — March-April, 1970) shows that sales costs are reduced when a strong advertising program supports a sales program. The total cost of selling to groups exposed to advertising often *drops* by 10% to 30%.

On the other hand, the nonadvertiser stands at a serious disadvantage in a well-advertised market. His cost of selling to groups exposed to his competitors' advertising may actually increase 20% to 40%. This isn't a happy thought in times when you're selling less.

*For a copy of this study entitled "How Advertising in Recession Periods Affects Sales," send \$1.00 to American Business Press, 205 East 42 St., New York, 10017.

The Association of Specialized Business Publications.

Here's great news you can stake your professional reputation on!

The ROSS Super Tree Stakes, with their pre-measured once-ayear formulation work on trees, evergreens, shrubs and bushes. Our high food value formulation 16-10-9 plus Iron and Zinc, helps promote fast, healthy growth.

These all-purpose stakes will help you cut costs, too ... Each case

of 160 stakes is enough to feed over 35 3" diameter trees. One application of this quality formula usually lasts all season.

Made to the exacting standards Ross Daniels, Inc. is noted for, these new stakes can be used either spring or fall, whenever time is most available to you and your crews.

Simple and easy to use, you just drive three Stakes for every 2" of tree trunk diameter into the ground at the tree drip line. Water does the rest, carrying plant food to the feeder roots.

Be sure to ask for *ROSS* Super Tree Stakes. Available at your regular Ross distributor or write:

Ross Daniels, Inc., P.O. Box 430, West Des Moines, Iowa 50265

Sawdust treatments Continued from page 34

the soil is rototilled to a depth of about seven inches and sown to rye, soybeans, or other suitable catch crops. The crops are plowed under before they are hardened. Now the soil is ready to reduce the loss of applied fertilizers and the toxicity of eradicants. At the end of the growing season the beds are ready for seeding tree crops or transplanting nursery stock.

This treatment has increased soil organic matter content about one percent (10 to 12 tons/acre on the experimental plots). This increase in the supply of humus will stretch nurserymen's fertilizer dollars, and increase the safety of using pesticides, and improve the quality of the planting stock.

The researchers checked to see what effect the treatment had on soil fertility. They found, using a rye catch crop, that the ammoniated sawdust produced a 300 percent increase in biomass over the adjacent control areas.

The bottom line, or the total cost of the treatment is about \$120 per acre. This seems high, but a considerable part of this expense goes in as soil enrichment in nitrogen and phosphorus, something nurserymen must apply anyway. And, considering nursery crops' value of \$40,000 to \$120,000 per acre, the cost is small.

Occasionally, resistant sawdust, cold temperature or lack of moisture may delay sawdust decomposition and depress the growth of catch crop. However, application of a solution of 250 pounds of ammonium sulfate or 150 pounds of ammonium nitrate per acre will correct the deficiency.

Reprints of articles are available on request. Write to the editor, WEEDS TREES & TURF, 9800 Detroit Ave., Cleveland, Ohio 44102.

FYLKING IS A SHOO-IN!

0217[®] brand Fylking Kentucky bluegrass, the famous Swedish beauty, stands out because of its many improved qualities. An outstanding feature is fast germination, rapid growth that makes sod lifting possible sooner than other varieties. Superior density of rhizomes and root system makes an almost impenetrable sod that helps strangle weeds, prevents invasion.

Purity is a prerequisite. Fylking Kentucky bluegrass contains no annual bluegrass (*Poa annua*), bentgrass or short-awned foxtail. Fylking is your guarantee of physically pure, genetically true seed. Fylking Kentucky bluegrass seed costs less than most other elite bluegrasses.

Fine-textured, brilliant green turf from early spring to late fall, Fylking is more drought, disease, traffic, heat, cold and smog resistant.

Low-growing, low-mowing characteristics result in fine professional golf tees and home putting greens; can be mowed low as 1/2-inch.

0217[®] brand Fylking Kentucky bluegrass is a shoo-in for first choice in any lawn seed mix. Specify the Swedish beauty, Fylking, at your local wholesale seed or sod distributor.

Another fine, quality-controlled product of Jacklin Seed Company.

Fylking produces multiple branch rhizome and root systems and an abundance of leaf tillers growing more parallel to the ground.

Certified MANHATTAN Perennial Ryegrass

School grounds in St. Paul, Oregon gets plenty of traffic but still looks great.

Manhattan **fairways** at Elkhorn Valley Golf Course, Mehama, Oregon. Imparts beauty and wear tolerance to this mountain course.

Manhattan Perennial Ryegrass has those desirable characteristics long sought in a turf grass.

Consider these data facts in your turf program:

- Superior fast establishment.
- Long term performance.
- Depth of crown assures better recovery from turf damage, greater wear tolerance, holds better under short mowing.
- Good density . . . more competitive with unwanted weeds and grasses.
- Less thatch development.
- Maintains vegetative tillers.
- Performs better in fall, later in spring and summer.
- Resistant to brown patch.
- Dark green color.
- Deep rooted, requires less water.
- Fine leafed.

Manhattan fine leaf perennial ryegrass is the versatile grass. Excellent for golf tees and fairways, parks and athletic fields, home lawns. Developed at Rutgers University, New Brunswick, New Jersey, grown in Oregon under rigid certification and quality control.

For more information write:

How much change does our American Economic System need: A lot? A little? None?

The more we all know about our system and how it works, the better we can decide what to preserve, what to change in the years ahead. That's why this special booklet has been prepared. Every American ought to know what it says. For a free copy, write: "Booklets," P.O. Box 1887, New York, N.Y. 10001.

A public service of The Advertising Council & U.S. Department of Commerce presented by this Magazine.

Massey-Ferguson has expanded its line to include the new MF 1655 garden tractor powered by a twocylinder, 16 hp, 40.3 cu. in. engine. Standard equipment includes head and tail lights, Timken wheel bearings, $3\frac{1}{2}$ gal. fuel tank, and guage wheel adjustment for mower weight. The MF 1655 offers a 12 volt battery and disc braking on the transaxle to supplement hydrostatic braking within the transmission.

SOLO U.S.A. now offers the SOLO 425 Jetpak sprayer with a spray wand weighing only about three ounces and "welded" at the joints with industrial strength resin to increase useful life. The SOLO Jetpak hand-operated unit is the first manual sprayer manufactured without metal or rubber parts to contact chemicals. The spray wand is made of strong glass fiber reinforced resin with either flat or hollow cone nozzles.
