says the attorneys, "it appears that dispute-settling policies vary from bank to bank; however, there is some risk to the seller in any credit card transaction where the seller incurs expenses before delivery."

Favoring credit extension by nursery retailers, the AAN suggest that requiring a cash deposit in these cases might be a possible solution. In this manner, the retailer could cover possible loss if the order were cancelled.

Nurserymen publish advertising guide

The American Association of Nurserymen has just released its

The author and consultants of the new *Turf Irrigation Manual* display their book at an announcement dinner held in Dallas, Tx. They are (left to right) Joseph A. Lane, Chief Engineer, AMTROL, Inc.; Thomas Byrne, District Manager, Peerless Pump; James A. Watkins, Author; and Don Campbell, Chief Plumbing Inspector, City of Dallas. Lane, Byrne and Campbell served as consultants to the author.

1977 Guide to Effective Advertising. The annual publication has been changed to loose-leaf format so that the guide can be inserted into AAN's Partners for Profit advertising manual.

Marketing Chairman Richard

Hutton Calls the guide, "a valuable clip service, a thought starter, and an idea stimulator." In the guide sample advertisements appear on one page with judge's comments on the facing page.

NEW! 48" KEES HEAVY-DUTY POWERMOW

SOIL

Flooding can cause damage from gas

Damage to crops is known to occur from flooding as a result of decreased amounts of oxygen, however under certain conditions the flooding damage may be related to a gas that is highly deleterious to certain plant roots, U.S. Department of Agriculture (USDA) scientists say.

Patrick G. Hunt and Robert B. Campbell, soil scientists with the USDA Agricultural Research Service (ARS), said that under certain conditions, particularly in the humid southeast, flooded conditions can result in the production of high concentrations of ethylene gas.

Ethylene is a highly volatile gas that acts somewhat like a hormone on a number of plant physiological processes and can be quite harmful at high concentrations.

The scientists, working at the ARS Coastal Plains Soil and Water Conservation Research Center at Florence, S.C., found that ethylene production was increased by additions of organic matter to the soil in addition to being highly related to the oxygen level and moisture content of soils. Soil compaction and physiochemical conditions also appear to be related to ethylene production.

Efforts are continuing to determine the extent of ethylene damage as a practical agricultural problem and to obtain a more detailed un-

derstanding of its production in the soil.

WEEDS

SWSS probes cost, benefit of herbicides

The Southern Weed Science Society (SWSS) held its 31st annual meeting January 17, 18 and 19 in New Orleans. The meeting was attended by more than 1,000 representatives from industry as well as scientists, students and producers interested in this annual exchange of information on scientific research into weed control.

The opening session aired several views of the 1978 theme "Herbicides: The cost/benefit ratio" including those of Charles Gilbert of Diamond Shamrock, representing the manufacturer; Warren Shaw of the U. S. Department of Agriculture, Agricultural Research Service, representing the public view; and George Mitchell of M & M Air Service, representing the user.

New officers of the SWSS announced at the business meeting include Cleston G. Parris, Tennessee Farmers Cooperative, at LaVergne, Tn., president; Morris G. Merkle, Texas A & M University, College Station, president-elect; Charles E. Moore, Lilly Research Laboratory, Memphis, Tn., vice-president; and John Abernathy, Texas A & M University, Lubbock, secretary-treasurer.

A turfgrass rhizotron (subterranean laboratory), scheduled for completion by next spring at Ohio State University, will allow scientists to monitor roots through observation windows. Instruments will allow 24-hour monitoring of radiation levels, relative humidity, rainfall and wind velocity and direction. An extensive series of thermocouples will be used to monitor soil, leaf, canopy and air temperatures.

the Reinco power team

HYDROGRASSING & POWER MULCHING EQUIPMENT

HG-15 Hydrograsser

Power, Precision, Performance. The HG-15 is ideal for applying fiber mulch, seed and fertilizer in one operation. Covers as much as three acres per load of granular solids in 12 to 20 minutes. Reinco's jet agitation system insures against clogging. Less down time for maintenance. HG-15... the profit producer.

M-80C Trailer Mounted Power Mulcher

Higher production. Lower maintenance. Heavy-duty M-80C handles a quarter of a million pounds of hay per day. Accurate distribution up to 95 feet. Equipped with straight through drive, M-80C has more power, needs less maintenance.

TM7-30(X) Trailer Mounted Power Mulcher

The TM7-30 (X) spreads 4 tons of hay per hour. Blows hay mulch up to 60 feet. TM7-30 (X) is also equipped with straight through drive. Discharge spout moves 360° horizontally, 60° vertically. Trailer mount permits on-site mobility, eliminates truck tie-up.

All the features. Without the fat. The Yanmar over-achievers.

YM series
13·15·24·33HP

Yanmar's 13, 15, 24, and 33HP compact tractors. Built to deliver more than their share of performance.

Because their power is diesel power. Pound for pound, gallon for gallon, the most economical, hard-working, long-lasting and easy-to-maintain engines going. Even more so because they're from Yanmar. The world's largest producer of small diesels.

Other features? You name it. Built-in. And optional. To make a Yanmar the right tractor for the job at hand. To pull or power any implement required. With the speed and efficiency you'd expect to get only from larger tractors.

Features without fat. It means big performance in compact tractors. Which makes a lot of sense these days. Any wonder we call them the over-achievers?

MAKE THE CUT

FORD TRACTORS

Photographed at Pebble Beach Golf Links

Year after year, Ford tractors and equipment help course superintendents prepare for championship events. Above, a Ford 531 LCG (low center-of-gravity) tractor is shown grooming Pebble Beach for the 1977 PGA championship. Tough, reliable and efficient, today's Fords can help you break par on many of your course maintenance operations.

Count on your Ford tractor dealer for sales and service. He's listed in the Yellow Pages under "Tractor Dealers" and/or "Contractors' Equipment and Supplies".

Ford lawn, garden and turf tractors. Six models, 10 to 19.9 hp. Completely enclosed engine, rubber mounts between frame and engine help reduce noise. Great work savers around clubhouse, shrubs . . . and your lawn and garden at home.

Ford 1600 tractor, an ideal combination of power and economy for a wide range of course maintenance work. 23 PTO hp. Big tractor features include differential lock, 3-point hitch and hydraulics and 9-speed transmission.

IT'S WAR

The Ataenius Beetle attacks by night leaving golf courses battle scarred in their wake.

No turf or course is immune to assault and the right chemical to dispose of the Ataenius effectively and legally is still being researched.

The cost to a golf course chosen as an attack site can be phenomenal, the damage devastating. As in any declared war, emergency funds are urgently needed to destroy the threat once and for all.

"The situation is serious," says Dr. Fred V. Grau, president of the Musser Foundation, "and is bound to get worse."

With your help the battle can be won, hopefully before your turf becomes a victim of war.

Contributions to combat the Ataenius could save millions of dollars of unnecessary repair work.

To help in the fight, send your contributions to:

Special Contract Applicator Profile

A 36-page pull-out section featuring the many types of contract applicators. Market data, successful company profiles, chemical and equipment profiles, and a forecast of business to come. This and more with the new Weeds Trees & Turf look. Join us in March.

This is where Fred Getz found out that the framus is really a reel lapping device.

It's the Jacobsen Turf Care Equipment School at our factory in Racine. And it's the oldest, most complete school of its kind in the United States.

Many users of Jacobsen Turf Care Equipment make it a point to send their service people here. Just to get maintenance training by experts.

It makes a lot of sense because it benefits them in several ways.

First, it enables users (like you) to make more and better repairs right on the spot. It saves sending

the equipment out for many repair jobs because you are better trained to handle a greater variety of service problems.

So it can save costly down time when you need to use the equipment most.

Second, the training in preventive maintenance helps your servicemen do a better job of routine maintenance. Which means that your equipment should last longer and run better.

This adds up to interesting savings in capital expenditures

over the long haul.

Courses offered include basic and advanced hydraulics. Circuitry. Parts. Electrical components. Engines. New equipment. And more.

Besides having the school in Racine, we sponsor field service clinics at locations closer to your operation.

Sound intriguing? For more details, simply contact your local Jacobsen distributor.

He can help you take the framus out of your service problems.
