

The Green Machine trimmer-pruner-cutter. side look at a classic.

In 1972, The Green Machine introduced a gas-powered string trimmer employing a new concept—extreme light weight combined with amazing torque. It proved the ideal tool for high production weed and grass trimming, as well as brush cutting and tree pruning. From the start, Green Machines set new industry standards for quality—and new records for time-saving and money-making. The reasons are basic: ingenious design and a fanatic devotion to excellence.

For instance, The Green Machine

model 3000 engines have been dynamometer tested—at full throttle and full load—for 200 hours. That's equal to 600 hours of field operation. Actual field operation of 1000 to 1500 hours is common-place.

Chrome and hone

To understand what's behind Green Machine performance, just take a look inside a model 3000 engine.

You'll see a precision die-cast cylinder with polished chrome-plated bore—plus such refinements as piston-ported fuel timing and almost five square inches of scavenge porting. Running inside that chrome-protected cylinder, you'll see a precision die-cast aluminum piston, micro-honed and fitted with double,

positively-located rings.

You'll also see a crankshaft and rod assembly of high-carbon steel, precision-machined, and aligned to $\pm .001$ -inch tolerances, running with high-speed ball-type main bearings and needle-type rod journal bearings.

Easy starting with P.F.S.

Long engine life is a recognized Green Machine virtue. So is easy starting. Thanks to a proven, reliable fuel pump and carburetor design. Plus an important Green Machine exclusive: Positive Fuel Shut-off. Engine "kill" is accomplished by stopping the fuel supply to the engine, rather than by cutting the ignition. This means that all of the fuel in the carburetor and combustion chamber is burned off after each running.

Fresh fuel is used for each start. Conventional "ignition kill" allows the fuel and oil mixture to remain in the chamber and carburetor where it can become

stale and even, with time, create a residue that prevents starting.

Nine heads and blades

Green Machine introduced the first professional-quality Tap-For-Cord automatic string-feed head. A total of five different string trimmer heads are now offered as well as four quick-change blades.

A string trimmer...and more

The Green Machine is a great string trimmer—and a great brush cutter, and tree pruner. With accessory metal blades, one man can clear up to an acre of brush a day, cutting easily through vines up to $\frac{3}{4}$ -inch thick. Tree branches up to three inches thick can be sliced through easily—in a single stroke.

See what's in it for you

The Green Machine is saving time and making money for thousands of users in every field: park and municipal, high-way, cemetery, estate, golf course institution, landscape, farm, school, rental yard. Crews equipped with little more than mowers and Green Machines are completing massive grounds-keeping chores in hours, instead of days. See what The Green Machine can do for your business. Contact your dealer or write for our new, colorful brochures. Take time now to look into a classic.

The Green Machine®

A yard-care classic.

An EXCEL HUSTLER mower out-hustles any out-front mower any time, any place.

And does it mow! EXCEL HUSTLER 275, 285, or new 295 cuts the straightaway down to size with a smooth, even cut, up to 6' swaths.

But where the EXCEL HUSTLER really shines is turning neatly around every bush and tree, signpost and picnic table. With every turn, operators turn into fans of its drive-wheel steering and fingertip control.

Does more than mow. Team an EXCEL HUSTLER tractor with attachments and it works all year long. Cuts all kinds of grass. Cleans dirt, litter, sand, leaves, etc. from walks and parkings. And what it does to snow is enough to warm a groundskeeper's heart!

The tractor is the core of EXCEL HUSTLER performance. Dual hydrostatic drive directs power independently to drive wheels, controlling both

speed and direction of travel. Because one wheel can move forward while its mate reverses, the operator can turn a full 360° circle within the mower's own length! No steering wheel can match the response of twin hand levers, nor even approach their ease of operation.

Naturally safer in design, both the 275 and 285 (and the new 295) have low center of gravity. Weight is focused over the drive wheels, and operator has unobstructed view of the front cut and trim edge.

Watch for a field demo or write for free literature and Distributor's name. Call toll-free (800) 835-3260; in Kansas or Canada, call (316) 327-4911 collect. EXCEL HUSTLER turf and groundskeeping equipment is built right by Excel Industries, Inc., Box 727, Hesston, Kansas 67062.

The 2-Step Turf Renewal Plan with Roundup® and Pennfine.

One. Two.

Spray Roundup® on the turf area to be renewed.

With just one application of Roundup® herbicide by Monsanto, you can control or destroy most unwanted vegetation. Including stubborn intruders like annual bluegrass, bermudagrass, quackgrass, johnsongrass, tall fescue, and kikuyu grass.

In a matter of days, Roundup circulates throughout these weeds. Even into the below-ground roots, destroying the entire plant. Yet Roundup has no residual soil activity. That means there is no injury to new seedings planted after application.

Spread Pennfine Perennial Ryegrass seed over the area treated with Roundup.

After applying Roundup, seed with fast-growing, fine-leaved Pennfine Perennial Ryegrass. Pennfine was developed by Dr. Joe Duich at Pennsylvania State University. Pennfine has been proven to germinate quicker, grow denser, and resist disease better than traditional ryegrasses. And it penetrates compact soil, sending its roots to depths of 12 to 18 inches. These qualities make Pennfine an excellent choice for turf renewal and help to explain why it's used by turf professionals from coast to coast. In a short time, you'll see the proof for yourself.

ALWAYS READ AND FOLLOW THE LABEL FOR ROUNDUP®.
ROUNDUP® IS A REGISTERED TRADEMARK OF MONSANTO CO.,

Banvel.[®] No Bull.

Forget all the claims. Banvel[®] Herbicides give you what you really need—exceptional weed control, without turf damage, at a more than competitive cost per acre. Banvel 4S gives you broad control of tough weeds, while Banvel[®] + 2,4-D provides an even wider spectrum of control, but see the label for certain grasses susceptible to 2,4-D. Both mix readily, and are stable in storage. And,

Banvel Herbicides— Tough on Weeds, Easy on Turf.

Use Banvel Herbicides on your next broadleaf weed application. For more information:

Velsicol Chemical Corporation
341 East Ohio Street
Chicago, Illinois 60611

Banvel Herbicides offer special translocation properties. This means they attack the entire weed both from the roots up and the leaves down.

Effective, yet economical weed control—that's what Banvel Herbicides can add to your turf care program. When all is said and done, isn't that just what you need?

Before using any pesticide read the label.
