

BETASAN®. THE NUMBER ONE CHOICE FOR THE NUMBER ONE PROBLEM IN LAWN CARE.

Year in and year out, you'll find that more lawn care professionals make Betasan® herbicide their choice for controlling crabgrass than any other brand on the market.

That's easy to understand. Betasan, after all, gives lawn care professionals better control of smooth and hairy crabgrass with just one application. And that usually stops crabgrass all year long. Without hurting existing turf.

It's safe and effective on established blue-

grass, fescue, bentgrass, Bermuda grass, Zoysia, bahia, centipede and St. Augustine.

So when your number one priority is getting control of crabgrass, get ahold of the number one crabgrass control.

Betasan®. It's number one against crabgrass. Always follow label directions carefully.

Stauffer Chemical Company, Agricultural Chemical Division,
Westport, CT 06881.

Over-Mulching A National Plague

Excessive layers of mulch will eventually harm or kill shallow-rooted ornamentals.

Heavy, repeated applications of mulch around shallow-rooted plants can suffocate their roots.

Francis R. Gouin, Ph.D.

Over-mulching of trees and shrubs can best be described as a plague that is slowly and methodically annihilating ornamental trees and shrubs in established landscapes. Over-mulching is a serious problem responsible for the decline and death of many shallow rooted shrubs and large coniferous specimen trees.

Nurserymen and landscape contractors have long been aware of the importance of not placing excessive amounts of soil over the roots of established trees for fear of

suffocating them. However, they fail to understand that excessive use of mulch around shallow rooted plants can have the same detrimental effect.

Heavy and repeated applications of mulch around shallow rooted established species such as azaleas, rhododendrons, mountain laurel, leucothoe, andromeda,

Dr. Francis R. Gouin is professor of ornamental horticulture for the University of Maryland, College of Agriculture.

boxwoods, hollies, yews, and camelias can suffocate their roots. If the species has the ability to root readily, the plants will often initiate new roots from the stems into the mulch layer, but produce little top growth.

Shallow rooted plants growing on sandy well aerated soils can tolerate more mulching than plants growing on heavy clay or silt loam soils.

Death to plants from over-mulching is slow and agonizing for the owner. There is generally a gradual decline in the vigor of the plants affected. The annual rate of growth becomes less each year, the leaves do not grow to mature size and symptoms of iron chlorosis begin to appear.

These symptoms generally begin to appear within 2 to 4 years after routine annual mulching begins. Approximately a year before the plant dies, the spring growth exhibits a severe iron chlorosis with considerable die-back of branches. The plants generally show little response to foliar applications of chelated iron or fertilizers.

By the time the plants reach this last stage of decline there is little chance for recovery and the plants become susceptible to attack by insects and diseases.

In Maryland, many cases of boxwood decline have been attributed to over-mulching. Simply removing the mulch from around the plants exhibiting early symptoms of decline has resulted in total recovery.

During the winters of 1976-77 and 1981-82 many over-mulched boxwoods and Japanese hollies were killed. Because these species root readily, all of their roots were in the mulch layer while the original root systems in the soil were dead from suffocation and rotting. With little to no snow on the ground to insulate, temperature in the abnormally dry mulch dropped to below root killing temperatures for these species resulting in severe root injury. Similar plants growing in the same vicinity, but without mulch or only lightly mulched survived without difficulty.

Many pine, spruce and fir trees

Shadow shines in my fairway mixture

 **Harvey B. Junor,**
Superintendent, Portland Golf Club,
Portland, Oregon

Harvey Junor mixes 25 percent Shadow fine fescue with CBS brand perennial ryegrass blend to overseed his fairways, and

is initiating a tee over-seeding program using the same combination. Harvey finds that a Shadow/perennial ryegrass mixture on his fairways requires less watering than the old *Poa annua*, while effectively crowding it out. His Shadow performs exceptionally well where trees compete for sunlight, water and nutrients.

effective drought and shade tolerance. Ask your distributor for Shadow, then watch *your* course shine in the shade.

Call or write us for a tech sheet and the name of your nearest distributor.

SHADOW
FINE FESCUE

Shadow fine fescue is a certified blue tag variety. PVP No. 8100155

Like Harvey's prestigious Portland Golf Club, more and more courses from the transition zone north are mixing Shadow fine fescue with turf-type perennial ryegrasses like Citation, Birdie, Omega, Manhattan and Manhattan II for

Shouldn't Your Next Grounds Maintenance Tractor Work Year-Round?

Excel has 20 HUSTLER attachments that make our units "all-season productive."

Thanks to its quick-hitch capability and 20 different attachments, your return on an investment in a HUSTLER tractor can be maximized.

SPRING & SUMMER ATTACHMENTS: 3-Way Mower Deck mulches or discharges to the side, rear or both; **Coulter-Type Edger** for sharp, professional trim; **Grass Catcher/Compactor** for clean lawns; **Grass Vac** (261 only); **72" Heavy Duty Deck**; **60" Flail Mower** for roadside jobs and thickly weeded areas.

FALL & WINTER ATTACHMENTS: **Rotary Broom** for debris or light snow;

54" or 60" Snow Throwers; **60" V-Blade**; **60" or 72" Dozer Blades**; **1/2 cu. yd. Utility Scoop**; or **Snow Groomer**.

ROPS, ROPS/Cab, headlights, heater and tilt-deck trailer also are available for HUSTLER models.

All HUSTLER attachments are designed for total grounds maintenance care. The HUSTLER simply does it all!

are killed because mulch is piled high around the stems. These species are highly susceptible to stem rot diseases causing organisms that thrive in the cool moist environment of the heavy mulch layer. Most species of spruce appear to be especially susceptible to injury from mulch piled around their stems.

Although it is profitable to apply mulch annually to landscape plantings, it is detrimental. Many irreplaceable trees and shrubs in landscapes are being killed be-

Mulches should not be used exclusively to control weeds.

cause organic mulches are being over-used. One to two inches of mulch is adequate to keep the soil cool, reduce water lost by evaporation, give the landscape a neat appearance and to allow easy penetration of water into the soil.

Shallow raking the existing mulch will give the landscape planting that freshly mulched appearance. Fresh mulch should not be applied until the existing mulch is nearly all decomposed and lightly incorporated into the upper layer of soil.

Mulches should not be used exclusively to control weeds. As organic mulches decompose they enrich the soil making conditions favorable for weed seeds to germinate and for roots of perennial weeds to become established.

Weeds in landscape plantings should be controlled mechanically by hand weeding or with pre- and/or post-emergent herbicides. There are a number of herbicides on the market that can be used safely around a wide variety of ornamentals. Directed spray applications of post-emergent herbicides can be used to kill existing weeds while the pre-emergent herbicides will control germinating weed seeds.

Yearly applications and heavy applications of organic mulches to control weeds should be discouraged.

WEEDS TREES & TURF

1984 BUYER'S GUIDE

1. Equipment 28

You'd be surprised at the number of new manufacturers of turf and landscape equipment. The types of equipment are in alphabetical order. The names of current manufacturers can be found under the type of equipment. Once you find the manufacturers, look in the next section for addresses and phone numbers.

2. Equipment Companies 48

Names and phone numbers of companies who make equipment for your business. Call or write them for product information and the names of their distributors in your area.

3. Chemicals 66

Chemicals are listed under general categories, by company name, by common name, and by trade name. 1983 was a big year for new chemicals. Check to make sure you aren't missing out on a new chemical.

4. Chemical Companies 77

One advantage of starting the buying season now is you have time to contact manufacturers and distributors for the latest information on their products. This section has addresses and phone numbers for all manufacturers and formulators of turf and landscape products.

5. Seed Companies 83

You can find suppliers of turf seed by company name, turfgrass type, or trade name. Proprietary turfgrass seed is still the best buy in landscaping, assuring you of purity and germination.

BRING YOUR GOLF COURSE UP TO PAR

With The Brouwer Golf Course Mower

- Designed to give your Golf Course a beautiful, consistent cut.
- Simple "No Wheel and Gear Drive" prevents tracks - ideal around sand traps.
- The "Floating Head" follows contours and provides an even cut without scalping.
- Economical to buy at 1/3 the price of self propelled mowers.
- Choice of blades per reel.
- Single lever control raises or lowers your mower for fast and easy transport.
- Available in 3-5 & 7 gang units.

"The Brouwer Golf Course Mower is far superior to anything I've ever used. As a result my fairways have never looked better."
