

OFTEN COPIED. NEVER MATCHED.

Suddenly, it seems everyone knows exactly what you need in a commercial mower. Amazingly enough, they all look just like a Goodall. Too bad they don't perform like one.

The Goodall commercial mower has proven itself with a fifty-year track record. That's why it's been copied. Here's why it hasn't been matched:

- **Quality of cut.** If you own a Goodall and any other brand, you already know which one produces the better cut, more consistently and with less downtime. That's why Goodall is preferred by lawn service professionals everywhere.
- **Choice of type, size and power.** You don't have to "make do" with a mower that's not quite right for your situation, or wait until next year when they say they'll introduce the size and type you need. We have it now. Have had it for years. And with Goodall you don't have to take the engine that "comes with the mower." We match one of nine commercial engines to your size and application.
- **Low maintenance.** You're in the business of cutting grass, not debugging "new" products for old line manufacturers catching up with the times, or new companies

hoping to break into the business. Goodall's designs were proven years ago. The others may look the same on the surface, but none have copied the quality that provides the dependability and low maintenance of a Goodall.

- **A past that assures a future.** We sell more commercial mowers in the 24 inch to 61 inch range than all our competitors combined. We intend to keep it that way by making sure our customers are as satisfied in the future as they have been in the past. That assures *you* of a reliable source for original equipment, parts and service, long after the others are gone.

Overall, it costs less to own a Goodall than a cheap imitation. For complete information on the largest selection of the industry's most popular commercial mowers, please write or call for our new full line catalog and the name of the Goodall dealer in your area.

World's first direct drive rotary.

THE BROUWER TURF TEAM

Mows

Brouwer mowers are available in 3-5-7 gang models. Positive drive with no wheels and gears avoids slippage and prevents flattening of grass.

Simple hydraulic lift design. Consistently sharp cut maintained with the Brouwer reverse gear backlapper.

The Fairway mower is available with floating heads, front and rear rollers.

Rolls

Brouwer 230 double and 130 single rollers with special rounded edges eliminate turf damage.

Hydrostatic drive and 30" width saves time, trouble and labour cost.

MODEL 230

MODEL 130

Cuts

Brouwer Sod Cutter's simple design makes operation, adjustment and repairs easy. Equipped with folding handles and kickstand for compact, stable transport and storage. Stripper blade available to help shred and cut old sod for easy lawn renovation. Also dethatcher blade for removing thatch.

The future of golf

This week I had the pleasure of attending a USGA conference. During lunch, I sat at a table with a group of assistant superintendents. They taught me a great deal.

Golf is rich in history. Since the late 1800's, golf has played a part of American life. We immortalize the sport, the rules, the architects, the golfers, and more recently the early greenskeepers.

This tradition attracted good people in the 50's and 60's to manage the acres of landscape needed to play the game. Today, it seems to take more than tradition to attract good future superintendents.

The lure of a prestige course, a tournament course, or a resort course seems to exceed the attraction of tradition. The job entails more than the love of working outdoors in beautiful surroundings, or being able to play golf everyday after you finish taking care of the course. It entails competitive salaries, course prestige, and fringes, such as freedom and budget to attend shows and be active in associations.

Knowing this, what happens next? What about those persons who liked golf so much they put up their own money to buy the land, build the course and run it? I know men who work seven days a week, 12 hours a day, and take home less than beginning superintendents at private clubs. Can this last?

Today, golf is a contest, both as a player and as a superintendent. Golf is becoming a commodity needed to help sell real estate, return dividends to stockholders of multi-course companies, or sell television advertising.

If you were a young turf graduate, wouldn't you tend to overlook the tradition for the bucks of being part of 'the big time'? After five years as an assistant superintendent, wouldn't you be busting at the seams to experience the challenge of a tournament, adding another nine, or rebuilding an old course? When you saw the equipment or chemical budget for the first time, didn't you ask yourself why it was so much more than your salary?

These are natural reactions today for anyone, not just college 'know-it-alls'. The only way to deal with them is to realize how they feel, teach them their time will come, keep them challenged and interested, and remind them of the tradition of the sport, not just the facts of the business of golf.

Kids aren't as idealistic as they were in the 50's and 60's. When they select a career and go to college, they are thinking of more than a pleasant career. They are thinking of income, advancement, and making their mark on this world. That ambition and drive is valuable. They will fight to achieve their goals or leave the industry for more challenging and responsive careers.

Subdue. The most effective fungicide against Pythium blight and damping-off.

Pythium weather. High temperatures, high humidity and high moisture. Once Pythium takes root, it can destroy turf within hours.

Unless you take a grass-roots approach to Pythium. With Subdue.*

Subdue works both on contact and systemically.

Subdue fights Pythium blight and damping-off—as well as downy mildew (yellow tuft)—in two ways. On contact, Subdue destroys

the fungi in the soil. Systemically, Subdue prevents disease from within grass plants. That's because Subdue is water soluble—easily absorbed by roots. So Pythium—and now, downy mildew—don't have a chance.

Subdue also controls costs.

Subdue's systemic action means longer, more effective residual

protection. Fewer applications. Lower chemical costs. And savings in maintenance and labor. And Subdue's low application rate—1 to 2 fluid oz. per 1,000 sq. ft. for 10 to 21 days on established turf—makes Subdue the most cost-efficient protection you can buy.

Before Pythium weather strikes, subdue it. Use Subdue in a preventive maintenance control program. And get a good night's sleep.
