

The
Penn
Pals:
Right
on
Course

Paul R. Latshaw, Superintendent
Wilmington CC, Montchanin, DE

The latest 'word' in bentgrass is PennLinks.

Paul Latshaw is spreading the word.

Paul Latshaw holds the distinction of being the only superintendent of golf clubs hosting 3 major tournaments. With Paul's reputation, expertise and candor, he's a powerful promoter for PennLinks.

"I know PennLinks to be the finest creeping bentgrass available. I know it's been time-tested on the North Course greens here at Wilmington Country Club since fall of 1984.

"I know PennLinks has an extensive root system, heat tolerance, and requires very little grooming or verticutting because of its upright growth.

"The upright growth habit convinced me to oversee the fairways at Wilmington. I know time will prove I made the right choice. And I like that, too.

"PennLinks. Spread the word."

JOHN DEERE

The power to fly

3325 Turf Mower

Buckle up. With a 138-inch cut and top mowing speed of 7.2 mph, the John Deere 3325 Professional Turf Mower has the power to fly through your fairway mowing—leaving nothing but a quality cut in its wake.

Five 30-inch cutting units are mounted on floating arms to hug ground contours closely. Your choice of 6-, 8-, or 10-bladed reels let you mow precisely and productively from $\frac{3}{8}$ - to 3-inches.

Power steering and two-pedal speed controls make operation a snap. Plus, pulling one lever is all it takes to simultaneously raise and disengage all five cutting units. A huge time-saver for cross-cutting.

For the name of your nearest distributor, or free literature, call 1-800-544-2122 toll-free or write John Deere, Dept. 956, Moline, IL 61265. We know you're going to like what you see.

Features like single-lever lift, 138-inch cutting width and 7.2 mph top mowing speed help the 5-reel 3325 make quick work of fairway mowing.

**NOTHING RUNS
LIKE A DEERE®**

Landfill space: Are we really short of it?

Is America running short of landfill space, or is it again being duped by whistle blowers?

An informative article about the so-called "landfill crisis" appeared recently in a publication called *The Freeman: Ideas on Liberty*, which suggests we're being taken for another ride, like we were during the "energy crisis" of the late '70s.

Published monthly by The Foundation for Economic Education, *The Freeman* contains logical arguments which refute the necessity of government intervention in our lives, and which emphasize the importance of privatization and free markets. It should be read by anyone who believes he is not getting all the facts from the usual news media/talk show sources.

Charles Baird, economist at Cal State in Hayward, Calif., writes that, "There is no shortage of geologically safe, potential landfill sites in the United States." According to Baird, Japan has 2400 landfill sites, compared to our 4800. Although one-half of our landfills are due to close in five years, landfills are in fact designed to last for only 10 years.

"State-of-the-art landfill technology," writes Baird, "makes it possible for all new sites to be environmentally safe and people-friendly. There are vast, empty regions in the West and Southwest that aren't used by anyone for any purpose that could be developed into environmentally safe landfills."

According to research, the supply of old newspapers exceeds the demand for recycled paper, and the bleaches used to clean paper are toxic, and might cause more environmental problems.

About 40 percent of our landfill space is taken by paper. Incineration technology could safely eliminate that paper, and produce electric power in the process. The U.S. currently burns 14 percent of its municipal solid waste, compared to Japan's 60 percent.

And now, landscapers and lawn care companies are being cornered by 1993 landfill bans on yard waste. Customers who don't want the clippings left on their lawns expect the cutters to take it away. But where are they to dump it? Bob Smart, a Cleveland landscaper, says the cost to dump yard waste has jumped more than 350 percent. And his is a small company.

A good composting landfill needs at least 10 acres of space, a luxury small companies can't afford. Unless cooler heads prevail, small, neighboring companies will have to band together to buy land as a cooperative effort. **And unless we incinerate more, the public should be charged for what it throws away. Don't charge only the businessman.**

Amigo Tall Fescue Is Truly Turf Friendly.

Amigo Tall Fescue from NK Medalist. It performs so well in so many ways, you'll gladly call it "friend."

What Amigo can do is just short of amazing. In sun, in shade. In Northern states, in the mid-South. In Spring, and late into Fall. At low or high fertility rates. On athletic fields, parks, institutional grounds, fine residential lawns. Or for sod. Straight, or in

NK Medalist blends.

Amigo dwarf-type tall fescue consistently ranks at or near the top in key trials, including the National Turf Evaluation Program (NTEP) Tall Fescue Trials.

See how quickly Amigo can make friends in your turf program. Contact your NK Medalist Turf Distributor, or call 1-800-545-6093.
