Par Ex Keeps Working When Mother Nature Stops Other Fertilizers Cold.

The days are growing shorter, and the first blast of cold weather is just around the corner — perfect conditions for a late-season application of Par Ex.®

Even when there's a hard frost around the corner, it's the perfect time for late-season fertilization.

Most competitive fertilizers rely on warm temperatures or bacterial activity to release their nitrogen. So when cold weather hits and bacterial activity stops, they become inactive and ineffective.

But Par Ex with its exclusive IBDU® slow release nitrogen goes on about its business, slowly activating controlled portions of nitrogen until the soil

actually freezes. That's because Par Ex releases its nitrogen through hydrolysis, a process triggered by moisture rather than temperature and bacterial activity.

The result is extended greening of your turf into fall and winter. And a healthier root and rhizome system with increased carbohydrates, to reduce the potential for cold damage and stimulate an earlier green-up in the spring.

To find out more about what Par Ex can mean for your course year-round, call us at 1-800-521-2829. Or write Vigoro Industries, Specialty Products Division, P.O. Box 512, Winter Haven, Florida, 33882-0512.

There's more than just a few degrees of difference.
